There are many totaly useless "facts". Hazing memorization
takes many forms...example - to pledge for XYZ fraternity,
the pledges might be "required" to memorize the names of all
the past presidents of the farternity/sorority.

Which is an admission on your part that you have no faith, zilch,
nada, nothing as to the true merits of code and the ability of yourself
and/or others to "sell" newcomers (or old times for that matter)
on the "joys, pleasure, value, worth" of learning and using code which
you have preached here for years.

> > Your saying that is NOT a very good
> > endorsement for the mode, Dick.
>
> That doesn't make it inaccurate.

So you truly don't believe in what you say as to the
merits of code?

Cheers,
Bill K2UNK

Well which/what is it Dick...is success in your mind ONLY
to be measured if EVERYONE (i.e. including Carl) buys the
code as to value, use, etc.?

If not, why do YOU care if
Carl, me or anyone else individually doesn't give a hoot
about code?

Is there some threshold level
of code users (i.e. 10% of all active hams...or some other value)
that would satisfy you or must it always be 100% of HF licensed
hams?

Cheers,
Bill K2UNK

Actually, given the time, I'd bet there'd also be "new code users"
from the ranks of long term hams. For many people, the time
they have for ham radio is limited while working, but once retired
some of them might have sufficient dicretionary time to pursue
code use. To each his own.

Cheers,
Bill K2UNK

Ah, OK. I wasn't sure.

But why be sarcastic here? The facts are correct, are they not?

The point I was trying to make is this:

Ed keeps mentioning the "4 page study guide" story, but doesn't
mention
the vast difference in privileges granted.

Fact is, we really don't have an effective entry-level license today.
> > >
> > > >Yup ... it's a shame those "newcomers" get a license for

>
> Does it REALLY matter in terms of the impression his
> diatribe must have made on newcomers?

Actually, YES.

For one thing, they guy is remembered because he was so unusual. He
stuck out like a sore thumb. Also had a big signal.

His gripe was that prior to 1953 it took an Advanced/Class A license,
or
an Extra, to operate 'phone on 20 or 75. Everybody else had to use
what
bits of 160 were available, or the ham bands above 25 MHz. 40 had no
phone segment and 15 wasn't a ham band yet.

Then, without an NPRM, RM or anything else, in late 1952 FCC opens all
privs to all hams except Novices and Techs. All of a sudden ol' Mike
has lotsa new
company.

> Because, without adequate technical competency, 1500W at
> VHF/UHF with unlimited antenna gain can be downright
> dangerous, not only to the person who's (mis)using it, but to
> his/her family and neighbors ...

Sure. But all that does is justify the need for RF safety questions
on the test. Nothing more.

And note that a new ham can go from no license to Extra without
answering a single RF safety question correctly. Many if not most
currently licensed hams have never been tested on RF safety.

FCC doesn't seem to be worried about it, though. They simply
provide regulations about exposure and survey and leave the
rest up to us.

> not to mention that most 1500W
> amps still use thermionic FETs (tubes) and therefore have high
> plate voltage supplies, which introduces yet another danger
> factor for the incompetent and those around him/her.

One can be just as easily killed by 120/240 VAC "house current". Yet
there is no test or licensing requirement to do most electrical work
on
one's own home. There are also all sorts of amateur electronics folks
(audiophiles, for example) who work with high voltage "hollow state"
equipment, yet they have no license nor test.

So, except for the possibility of exposing others to
higher-than-regulation
RF, there is no safety issue.
>
> Thus, a test of adequate technical competency would be a
> RELEVANT, REASONABLE requirement for such high powers,
> not just a "hazing ritual" "hoop to jump through."

Except for the RF exposure stuff, that's simply not true. Should
government be in the business of protecting hams from themselves but
not other citizens?

Fact is, most of what's on the written test is NOT needed from a pure
safety consideration, nor for the orderly operation of a "modern"
amateur station. Most what's on the writtens is only necessary to
know if a particular ham wants to build something or use a
particular mode.

> I don't "hate high power" ... I simply thing that it is misused A LOT,

How much is "a lot"? Sure, some hams never turn their amps off, but
your statement seems to be a sweeping generalization.

> that it presents potential dangers (electrical or RF exposure ... the
> latter particularly at VHF/UHF and up), and that better antennas
> and modulation and coding schemes offer FAR more "bang for the
> buck" than brute force power.

Sure. But many hams cannot put up better antennas than they already
have.

And on the subject of "better modulation and coding schemes", I'll ask
again: What mode(s) did you use to work those 70+ countries and 40+
states that you talked about here a while back?

I bring this up because it seems to me that it's a bit disingenuous to
preach to other hams about "better modulations and coding schemes" if
yourself don't use them as an amateur.

> However, if the more elegant solutions
> (antennas, modulation, coding) don't provide adequate link margin,
> then I have no problem with someone using higher, allowable powers.
> (But, according to the minimum power rule, which is probably the
> MOST violated rule in ham radio, the guys who are telling each other
> that they are all S9+40+ to everyone else in the group are MISusing
> their amps, IMHO.)

Sure - if, in fact, they are using amplifiers at all.

Oddly enough, most of the folks I work on HF are running 100 W or less
-
often far less. YMMV.

> >

> > It was common back in 1963.
> > My first rig was homebrew, and it has been followed by many others.
>
> Because of code testing, most newcomers today enter as techs.

I disagree. The trend to newcomers starting off as Techs goes back
way before 1991. The reason is simple: You get a LOT more privs for
just a little more study.

> The
> most versatile piece of gear they can acquire as a 1st rig is a 2m HT.

All depends what they want to do. Most start with an HT because it's
self-contained. But in many areas the HT owner is VERY limited, and
would
be better off spending the same money on a dual band rig that could be
used mobile or at home, and some decent antennas.

> How many "experienced, long-time" hams do you think are technically
> capable of building the equivalent of, for example, a Yaesu VX-5R?
> (let alone building it cost-effectively, when buying parts in small
> quantities
> at outrageous prices compared to what the OEMs pay?)

I doubt most could. But that's not the point. Most hams could not
build
the sophisticated commercial equipment of the day.

The point I was making is that the technical stuff in the tests had
more relevance at a time when many if not most hams were building
equipment, especially transmitters. Today, among newcomers,
building is not nearly so common, so there is less if any absolute
NEED for technical knowledge. Those that do build need far more
technical knowledge than the test requires.

In other words, it's a hoop for newbies to jump through.

> - From my experience, most don't find it fun ... or even interesting ...
> that's why so many refuse to do it.
> I don't find it fun ... I don't use it.

I must say that based on your many, many comments on the mode over the years, I would hardly expect you to like it or have an objective view of
the mode.

> I have NO problem with anyone
> who WANTS TO using it to their heart's content. I DO have a
> problem with it being used as an unnecessary barrier designed
> to keep people off of HF.

But not with using the written tests to do the same thing. One man's "reasonable and relevant" is another's "hoop". Why is a Tech Plus
competent to run AM on 6 meters but not 10 meters? Why is a Tech Plus competent to run 1500 W PEP on VHF/UHF but only a fraction of that on HF, even though the RF exposure hazard is less on HF/MF?

> > Do you know WHY Novices and Techs got 10 meters?
>
> Because the FCC wanted to make ham radio at least marginally
> more attractive to newcomers ("novice enhancement").

That was a minor reason. The real reason was to counter the increasing incursions of freebanders and others illegally using 10 meters.

> But I'll
> bet that the "traditional society" lobbied the FCC to make sure
> that they didn't get "real ham" privs in the other HF bands.

Nope. In fact, the "traditional society" pushed FOR the idea in the first place.
> > >
> > >Jim,

Not really. Most of life is not that different.

> That's
> part of the problem ... you can't keep ham radio "like it was 40 years
> ago" and expect it to be vital, heathy, and viable for the long haul.

Only if the change is for the better. Many changes are NOT for the
better. The mantra that "change must be accepted" as if all change
is inevitable and good is simply bogus.
>

> 13.

I disagree! The new General test is 35 questions from a publicly
available pool. The 5 wpm can be taken independently (CSCEs didn't
exist in 1963, either).

> There is a place for an entry-level license ... and other than the

I would say what is needed is a 21st century version of the Novice.
New
name, new privs, simplified test. See what we came up with - check
google.

Why not an annualcode recieving contest too?

Many hobby pursuits encorage "excellence" by
hosting contests that focus on desired qualities.

Cheers,
Bill K2UNK

Not sure who asked this, but by the number of people killed,
the 911 WTC is certainly one of the worst, if not the worst.
I don't know of any other "disastor" that had as many people killed...
but I'm willing to listen.

Ed,
Welcome to the club. NCI get's the same accusation from some
people.

> >Are there independent, disinterested witnesses to all this "openness and
> >honesty?" All I've seen over the years is what the ARRL says it
> >does. There are NO independent checks or balances; the ARRL

proving
> they weren't" allegations?

Yep.....I spent many hours reading the actual comments filed by
people on NPRM 98-143. Before the internet, that'd be
virtually impossible and cost prohibitive.

> >The ARRL has a large website, too. Many sources of amateur

As a paid member of ARRL, I'm glad that ARRL doesn't give everything
on the web free to non-members. Nice to know that membership
gets me "extra benefits".

> >That same website has continual advertisements paid for by others and for

Last I checked, there is no law prohibiting anyone from
starting another "ARRL like" organization. Now I haven't
checked lately, so maybe ARRL got a special law passed
through congress while we weren't looking.

> >Of course, the ARRL tries to influence ENTRY regulations into

Pure unadulterated bunk. Is there anyone other than
Dick that truly believes that once the code testing is ended that
"the people who are never required to learn it for a test will not learn
it."

> So they will never learn to like it. And so they will never use it. End of

What a sorry example of a code enthusiast. If I were
a serious code user I'd sure not want Dick plying the
ranks of newcomers with his total negativism.

No cheers,
Bill K2UNK

You become more peculiar with each post. Lemme set you straight, Seymour. You are posting in an amateur radio newsgroup. Perhaps you'll forgive radio amateurs if they seem to be more concerned with amateur radio than with the rest of the radio world. Indulge us. After all, you are the outsider, the individual who is not a member of the worldwide community of radio amateurs. You are not *authorized* to communicate with radio amateurs via radio.

You aren't impressing anyone here (except perhaps yourself), Len. You only succeed in portraying yourself as a flake. I believe you stated that you were interested in becoming a radio amateur. Anyone reading the enormous volume of material you typed would be hard pressed to find any evidence of that interest expressed in your rant.

Hey, make it as worth my while as memorizing a ham radio exam and you might
get my attention. A megabuck might do it. Betcha I could do it.

Till then you're still just blowing trollsmoke from your posterior.

BINGO. Thanks, Jim!

Any question in the pools can be subjected to a simple test. Just
consider if an amateur could properly and safely operate a ham station
without the knowledge contained in the question. If so, the question
does not cover knowledge that is absolutely necessary.

For example, we must identify ourselves on the air using our callsigns,
so questions about proper ID involve "absolutely necessary" knowledge.
But one can operate without knowing the difference between a tunnel
diode and a zener diode, so that knowledge is not "absolutely necessary".
Instead, it's part of the hoop.

I would venture to say that there are more hams on the air today using
Morse/CW than there are hams using homebrew rigs. Yet a technical
knowledge test is held up as a "reasonable and relevant" requirement
for an amateur license while a basic Morse/CW skill test is not.

Kinda like saying you have to answer detailed technical questions on
how your car works in order to get a driver's license, but you don't have
to know how to drive a stick shift to get the same license.

A while back there was an instance of an individual representing
himself to schools as a representative of the AMerican Red Cross
Disaster Services, said he was going to use some school children to
run some practice evacuation drills. Fortunately the school officials
decided to contact the local chapter to find out if thi person was

indeed who he said he was.

Similar thing happened to me in NYC, when arriving at LaGuardia, I was wearing the ballcap of the local Fire Department that I am affiliated with, it also had my board member pic for the local Red Cross chapter. Remember this was a time that security was tight at ground zero, only people allowed in were fire/police, federal agents, and the Red Cross. Anyway I sat down and was talling to some fellow Red Cross volunteers who flew in on the same plane, and some fool comes by and steals my hat, obviously to try to gain entrance into restricted areas. Fortunately there was security people close by, and I made them aware of the situation, and I got my hat back, and he went to the pokey.

Personally, I feel that stealing or misappropriating a call sign could be considered identity theft. Only thing is though, the person who took the said call, would not have access to the true licensee's CORES id number.

Hell, that's all that is left, Might as well have one-license-fits-all.

The FCC sucks. Over thirty years ago they started something they all called
Incentive
licensing, designed to cause hams who were more than nonchalant about the hobby
to
upgrade their knowledge and skills, and when they did, then they were awarded a
few
kc of extra spectrum and a certificate to hang on your was attesting that you
had, indeed,
met all the requirements of that lofty charge. Now what little staff remaining is
too
absorbed in the mechanics of PC to bother to even concern themselves with any
such
nonsense, save an occasional barb hurled at ham radio in general decrying our
solaced

"failure to adopt advanced technology" ad naseum. All the while they embrace dolts like
Stevenson who may in fact be a digital communications designer *at work*, but hangs onto
his SSB microphone for dear life as a ham.

Disgusting is far too mild a term to waste on it all.

After having taken the tests, all under the new system, I can assure you
all that memorizing the tests are hard enough that anyone who does it
would be clever and stupid simultaneously.

clever to memorize all the answers, and stupid because they couldn't see
that it would be easier to pick up the underlying principles.

Lots of hams have rote memorized the question pool since 1985. In have no particular interest in how Larry did it, and you can find in the archives where I
stated unequivically that rot memorization certainly is a part of learning. The problem
lies in what is learned, radio theory and regs or just word associations to get a license.

> than I do.

Gee I'm sorry to hear that. How long did you say you've been working CW?
Betcha it won't in weak signal conditions where you can't get an attractive S/N
ratio.

I heard something similar except in reverse.

Seems there was an American airline pilot who had just landed at large
airport outside Berlin.
He was a bit confused as to how to taxi to the ramp and asked for directions
at least 3 times,
always politely. On the 3rd request for directions, a rather terse and
thickly accented voice
answered and curtly repeated the instructions ending with a very
smart-alecky, "Hazz de
Americaner not been to Ber-leen before?" The quite senior Captain paused
and then replied,
Er, affirmative.....but it was in 1945--and we, uh, didn't stop!"

Krell, you really aren't very bright, are you? So what did Stevenson do for
over 25 years,
instead of hang out on HF (as he clearly was desperate to do)? Huh?

Cecil's lame answer of "the only one that matters NOW" is so much fluff. NO
test matters
now.

Where I am from "razz" means to tease, so I teased her about speaking so unkindly about my
radios, declaring how worthless they were, and then using the HF to keep track of me.
So, it had a "use"--even to her!!

>

In some cases, the person you are shadowing doesn't have to hear the relays
of messages. However, how much time is it going to take if I have to
decipher and re-relay a message? In close proximity to disaster operations,
there is no need for CW. For traffic nets carrying H&W, or provisional

information even, CW is probably a great mode, although still a little
impractical at even up to 200 miles away from a scene.

> Obviously for short-range tactical communication in a situation like that,

I don't ask my served agencies to trust or be confident--they are quite
aware or we wouldn't be asked to be a part of their activities. And, it
sounds to me like once again you are enjoying misunderstanding to the hilt
what I am saying.

Kim called it "this country's worst" disaster, which is pretty clear. I don't
mean to trivialize or minimize it in any way, but "worst" is pretty strong
stuff.

Let's exclude acts of war, even though 9/11 was clearly an act of war against
the
USA.

Here's one that comes to mind:

In September of 1900 a major hurricane hit Galveston, Texas and killed over
5000
people. Yes, it was over 100 years ago but it sure qualifies in terms of being
a
disaster and in the USA.

Larry, as opposed to you and I, most of the hams and friends I have around here (some hams are nothing more than mere acquaintences) have far better things to do than get involved in this crap. Think of me however you must, Larry, if it makes you feel better. You see, when the truth is known no proof is needed.

And as just another incorrect American, I have to ask just what is a
"looser"? Is it something
that has come "loose" from its moorings? Is it "looser" than it was
yesterday? Oh! Could it
be that you meant "Loser"!

Seriously, (at least on the American side of the pond) the various
expressions of the verb "to
lose" and the noun "loser" are the most misspelled and misused words on the
internet. How come we use these words so "loosely"?

Jerry

That was Jim/N2EY asking that question. I didn't dare answer, for fear that I would forget to use the qualifiers "some" and "I believe" and "in my opinion" enough times in what I had to say.

However, the WTC is the worst disaster this country has ever faced by far more than the number of people killed:

- a war has erupted over it
- companies are going under because of it
- our entire country is still at risk from it
- our government continues to legislate and impinge upon civil liberties over it
- patriotism has become the new measure by which we accept each other (yes, that is a bad thing)

And that probably just scratches the surface. Internationally, financially, emotionally, this disaster continues to spread out like a nuclear blast.

You can easily prove that by listening TO @wW1AW code test sessions where they start the code at 35 WPM and work down. After listening to the 35 wpm session followed by the 30 and 25wpm sessions, 20 sounds really SLOW.

But then, to one who never learned it at all, 5wpm is supersonic.

41. Re: Using Amateur Radio to Talk on FRS

Newsgroup: rec.radio.amateur.policy

There are some instants where the addition of amateur frequencies do
not void type acceptance. I made sure to check this out legally before
I proceded. I can only have one radio in my work truck, so I have used
one of the 16 channel memory banks in a commercial radio to program
ham freqs for myself. It is the better solution, rather than mod a ham
rig and go the other way. Besides, the commercial rig is a wopping 100
watts all the time. No problem hitting those repeaters with a 5db gain
antenna. And the programming software for most of todays commmercial
radios will let you put them right in.

I rote memorized word associations to gain all amateur frequency privileges
in 1952. That *IS* the purpose of the license, Dick, to gain privileges.

Bill, you BIT very hard on this one, ey? :-)

Alright, together now...PROVE that either election is honestly done
without any shadow of a doubt. Simply SAYING so is not proof.
Simply saying so requires an article of faith of the membership and
a strained believability factor on the part of non-members.

>> >Are there independent, disinterested witnesses to all this "openness and
>> >honesty?" All I've seen over the years is what the ARRL says it
>> >does. There are NO independent checks or balances; the ARRL
>> >says it is honest and aboveboard and all must take them at
>> >their word..
>>
>> Yes, we must. :-) Why would those who set ARRL policy not want to be
>> honest and above board?

Control, power, self-enoblement through altruistic, noble works which
have publicity of same by their own organization..

Is that somehow so "alien" in the entire human race?!?

In my area of the USA a few million of us will take part in an election
of local and state officials and propositions. The L.A. County
Registrar will check and count those ballots, permitting selected
party officials (of many parties) to observe the entire process. That
happens in many areas of the USA, not just here. Checks and
balances at work in regards to government, a democratic process.

I am asked to BELIEVE that private organizations, NCI or ARRL are ALL "honest and above-board." I have no other evidence that they are or aren't. Where is the "check and balance," the observation of the process? Either organization SAYS they are doing honest things and all are obliged to take them at their word.

Many, many, many politicians and party workers and propaganda spinners of all the parties SAY they are all "honest and above-board" and some of them are. Unfortunately some are NOT. There is seldom any rational basis for determining that ahead of time. Everything is taken as an article of FAITH.

I will grant you government elections and polticians are not quite related to private organizations claiming altruistic motives. You will have to grant me acknowledgement that government and elected officials of government have a number of independent agencies and private organizations observing the honesty of the election processes and the officials themselves. Can either you or Ed grant to non-members the same proof of honesty of elections and officials of private organizations who do NOT have the same checks and balances? I don't think so.

All the non-membership gets when challenged about the above is peevish statements demanding that all accept them "on their word" because both are "honest" because they SAY they are honest. Sorry, but that is a non-answer, just a variation on the "you must believe us becasue we ARE honest" spin.

>Must be a grand conspiracy. :-)

My challenge on proof and altruism was not based on some "grand conspiracy" but of the PERCEPTION of many that elections and policy decisions MAY not be as honest as we are told.

A way to counter skepticsm is to misdirect or engage in ridicule. Misdirection is to dance away from a direct challenge and to point to "all the other great things" the organization is doing to "help amateur radio." Now, if NCI has one policy on certain things and the ARRL an opposite, both cannot be "right," can they? If one is "right" then the other must be "wrong." Another possibility is that both of them are "wrong." It is not possible that both of them can be "right" yet each say they are. Ridicule of skeptics is good misdirection, putting the onus on the challenger and diverting from the challenge. That does not prove "rightness." It is a smokescreen to avoid the challenge.

>Why Ed, what about all those clandistine phone calls from ARRL
>to FCC? :-) :-)

Public release of FCC announcements has occurred on the ARRL website before it was available on the FCC website.

Not many, I'll grant, and not lately. Apparently some skeptics
commentary got through to the ARRL and they are more
careful.

>> Uh, oh, here come the Black Helicopters and Capitilizations. Must be
>> Pontification time!
>
>Yup...same old conspiracy theory silliness.

...and also a sign of a commonplace syndrome of arrogance on
the part of organization officials or members. This time it is
ridicule for smug superiority reasons?

<snip>

>Kinda reminds me too of the people that complain about judging
>rules at one of the car club events I have helped organize BUT they
>don't join the club to be a part of the work effort.

Are the issues before WRC-03 on amateur radio are considered the
same as a "car club rally?!?"

The ARRL has approximately 170,000 members. The membership
in NCI is unknown. If either say you KNOW what the feelings of
either or both members are, you are very foolish indeed or think
that all can be duped. If the latter then it is a height of true con-
manship.

The ARRL has lobbied for certain amateur radio regulations in
the past which concern GETTING INTO amateur radio. Quite a
long time of lobbying and influence with the FCC. Now you are
implying that the ONLY way to work for getting INTO ham radio
is get into ham radio first and "work from the inside?"

That is not following democratic principles. That is stacking the
deck in favor of only one game with little hope for success.

>Ed, It makes no difference. The conspiracy theory people
>will believe whatever their fantasies are.

Neither of you acknowledge that perception by others is subject
to skepticsm. That is turning a blind eye away from criticsm.

Ridiculing skepticsm is not an answer to any challenge.

>Last I checked, there is no law prohibiting anyone from
>starting another "ARRL like" organization. Now I haven't
>checked lately, so maybe ARRL got a special law passed
>through congress while we weren't looking.

A monopoly can effectively tie up available market monies
for a particular activity. A major portion of ARRL operating
funds comes from product sales, much more than
membership fees. QST has had to reduce its size due to a

shrinking market for amateur radio related products.
Independent publishers of amateur radio books and
periodicals have a similar problem. The ham radio market
is finite.

To deny that the ARRL has had a major influence on amateur
radio regulations in the past is about like denying the sun
comes up each day. Other amateur radio organizations HAVE
come up challenging the ARRL. Their goals were as lofty and
altruistic as any of the ARRL but the scene was already set for
the ARRL and the play went on without them.

I'd mention "No SSB International" but that never seemed
anything but a glossy sarcastic jab at early NCI, fueled
primarily by Jim Kehler's arrogant disdain for those not loving
CW and DXing. It is no longer visible. Eric June had a more
noble goal of preservation of CW through legislation but lacked
the propaganda skills to reach any masses. It is no longer
visible. FISTS exists but apparently suffers ennui, only its
devout faithful attending, failing to attract enough newcomers.

>> >Are these just one person's observations? No. Hardly. It is a

>> it, Len.
>
>And nothing is stopping those thousands from starting their
>own "alter-ARRL" organziation.

There is no quantifyable number of those who were not convinced
and walked away to pursue other recreation. They are still vocal.

Established small and big organizations do not acknowledge
their existance. They may be too busy extolling their stated
"virtue" and "honesty" without quantifying those things.

>> This reminds me of the guy in rags standing on the street corner preaching

>in the reduction to Len's commentary to such
>fantasy land exhortations.

Ah, but I LIVE in the real world. Some wish to create a fantasy
by stating everything they say is "true' and "honest" yet offering
little substance for their veracity except a necessary Belief.

I was discussing organizations, not indivuduals. Two individuals
from organizations felt obliged to take things personally and
to rebut on a personal level to a skeptical challenger. Cheap.

So, to the private organizations, where is the independent proof
that all your elections are honest?

Sorry but, according to the dynamic duo in here, "I either know nothing about amateur radio" or I "lack the necessary moral virtues of proper attitude towards amateur radio."

I have no objection to the public question pools as they are. Anyone can read them.

Why do you seek to imply that I am objecting to the pools? I simply pointed out something that exists, a mechanism in-place for changing the questions to another's wishes.

Do you suspect nasty, evil (shudder) conspiracy plots afoot?

Ah...skepticsm is evil? Must be...

I cannot wait till the code requirement is dropped completely from ARS so that I can follow in the footsteps of my mentors. Those "20WPM Extras" and other code pushing scum that are icons of Amateur Radio legend have given us underlings a good education on how to act on HF by putting these practices on display on 3898, and 14313 and other pompous sections of those elitist bands. I have learned much from them about radio protocall that I was able to put to immediate use on CB through the years. I as a no code tech that passed his advanced, and almost passed the extra written when I tested for my license will be looking forward to talking with all my dear friends on HF while I use fowl language, discuss the intricacies of trailer trash, tell cat killing stories, and work the actions of my firearms, as I have heard all of you fine examples do for years. I salute you in your pursuit of Amateur Radio excellence, and hope to join you soon in your unholy endeavors. Even now I am laying my evil plans, and it will give me another use for the best CB I ever owned. A Yaesu FT-100! Two meters, 440, 6 meters, and CB at 100 watts all in one box. Life is good!

IN CONTEXT, radio was 4 years old in 1900. The Radio Club of America would not be formed for another 9 years. How would RADIO have helped, aided the Galveston victims still alive?

Now where are the specifics of a CW BY RADIO message to aid disaster victims where the dead victims totals are greater than 3300? Specific, no generalities.

Ah, yes YOU will be the prima donna in your new and improved brotherhood.
Gotta redo
it all since you couldn't cut the mustard in the old one, eh?

Yep, let's just make it one big wall to wall CB. We're headed in that very
direction, and are
well down the road to getting there.

When the FCC opens the next inquiry I intend to recommend that the ARS be
fundamentally
reconstructed OFFICIALLY to reflect the reality of today- that it is no longer
a fundamentally technical service or even a technical passtime, and is really
so little different from Class D CB
that they might as well go ahead and combine the two services officially,
instead of perpetuating the farce. NO technical exam is needed, after all
virtually everyone buys all their
gear these days. If it breaks, off it goes to the factory service center. Why
should mere users
be required to pass a test on their Maytag when the repairman stays so idle?
Where's
the difference?

And might as well give REACT the frequency and equipment capabilities they
need to do
their "public service" hobby. After all, there are a lot more of them than
us. Jim Haney
should be pleased.

Just look at all the benefits- no more amplifier restrictions, we won't need
to worry about
the ten meter incursions, all our Good Buddies can now talk directly TO us
instead of about

us, Carl will have a plethora of newbies to tutor on all the grate snazzy new digimodes he
claims to be working on while he chews his HF microphone, and surely there's a ream of
others that I haven't thought up yet. I'll get to work on that. Why not just go ahead and
complete the New Age Ham Radio transition and do away with all the chaff and balderdash?

If all hams had the same license, I couldn't possibly be a prima donna,
Dick, no one could - that would be minimize the animosity among hams.

Then shortly after WW2 a pair of shiploads of fertilizer exploded in the harbor
at Texas City
pretty well leveling the whole place. I don't recall how many people it killed,
but it was a lot, and it sure qualified as a major disaster.

>Pure unadulterated bunk. Is there anyone other than
>Dick that truly believes that once the code testing is ended that
>"the people who are never required to learn it for a test will not learn
>it."

I believe that fewer will learn it sans code testing than will learn it with code testing. I think that the number of hams that will go on to use it will be slightly smaller without a code test will be only slightly smaller than the number that would learn it for the code test then discover magically that they really don't hate it after all.

I believe that the broad numbers I estimated above are smaller than they would otherwise be because of the things that some of the PCTAs are saying about the mode and their perception of the unworthiness of people who are passing today's tests.

The general convention I use in making the decisions on the www.arrl.org/tis pages is that information that is for the overall benefit of amateur radio or help for newcomers is made public. That which helps an individual ham with his or her hamming is a membership benefit.

I think that those that choose not to receive QST have little cause for complaint if some of the QST articles are not available to them.

Maybe not. At first I was going to agree with Jim, but I think that if we look at the impact of both disasters on our nation as a whole, 9/11 is the worst hands down. We did not see the nationwide financial impact, nationwide changes to our transportation system or nationwide changes to our sense of security after any of the hurricanes. Perhaps one could argue that our being involved in World War II was a worst disaster, or that the attack on Pearl Harbor had a greater impact on our nation.

"Worst" can mean a lot of things to a lot of people.

I have not stressed that fact because the contexts I respond to are usually related to the number of young hams, and the relative un-ease of getting started today is, IMHO, a significant reason that we see plenty of 30 year old newcomers but few 15 year old newcomers.

The other context is related to "dumming down." It is clear that the exams of today are more comprehensive than the exams I took -- completely so at the entry level, and with the exception of the code test at the "all priveleges" level, so the premise that amateur radio is dumbed down is, IMHO, a flawed one.

interesting point there OM.
I have had my run-ins with the same problem here in phoenix quite some time ago. However, I was not the only one. there was a particularly nasty case back around 1994 that really had the phoenix area buzzing for a couple of years. I feel sorry for that ham. he had no end of trouble with his call being hijacked and used on everything from police frequencies to harrassing autopatch phone calls.

from what I hear, he pretty much went off the air (though I did hear indications that his call was being used on 2 machines locally last night).

still fun in the sun in phoenix arizona.

Technomage
(My call is my own business and those that know me also know my call and won't transmit it here).

Why would that person ever have to hear the message sent unless there was
doubt as to the ham's ability to send the message correctly?

>However, how much time is it going to take if I have to
>decipher and re-relay a message?

I think you mean "receive" a message. Obviously voice is faster if it's a
simple message that doesn't get written down. "Company 6 needs 5 more
air packs right away", for example. But for messages that get written down,
the transcription speed often becomes the limiting factor.

>In close proximity to disaster operations,
>there is no need for CW.

All depends on the situation. In most cases VHF/UHF voice is the mode of
choice.

You infer what isn't there. All I have to go on is what you actually write,
Kim.
One thing I have learned here on rrap is not to assume things from rrap
posts.

If you are seriously interested in the recent use of CW in disasters by
amateurs, go to google and look up a post by KT4ST that started a thread
called "Hurricanes and Emergencies". Post date is October 10, 1999, and it
describes the efforts involving an evacuation connected with Hurricane Floyd.

Worse than the Galveston hurricane of 1900 in total impact? I agree!

What I was asking about was the criteria for "worst", which is an absolute. In terms of lives lost, Galveston was worse - that was my only point. Your criteria may vary.

>We did not see the nationwide financial impact, nationwide
>changes
>to our transportation system or nationwide changes to our sense of security
>after any of the hurricanes.

True.

>Perhaps one could argue that our being involved
>in World War II was a worst disaster, or that the attack on Pearl Harbor had
>a
>greater impact on our nation.

I'd agree with that - so far. There may be more attacks.

>"Worst" can mean a lot of things to a lot of people.

Which means the criteria have to be defined. I don't know about financial devastation, but the Enron mess looks really bad.

In looking at this, it seems to me that the 9-11 attacks should not be compared to
natural disasters like hurricanes. Hurricanes are not deliberate acts of war. Human beings have developed the capacity to be far more destructive to each other than Mother Nature.

--

So I'll ask this question: What fundamental changes are Americans willing to make in their lives in order to prevent more terrorist attacks?

Using radio's most basic mode.... (since you didn't state amateur radio's most basic mode) So how come 911 dispatchers, firefighters, law enforcement, ambulance jockeys, and many other services who very well may come up with an alternate means of communicating when conventional modes fail aren't required to learn it? If there is definitely a case where the need for a message to get through is more important than most we will ever do, publice service frequency occupants would have to be a prime example?

If morse code is so important, why aren't they required?

I know you will take this as an attack or an insult, but it isn't.

Source record: 36076

From the looks of things, ham radio won't survive on it's own merits because of:

1. Lack of promotion (a good offense) by our largest psuedo-representative. (ARRL)

2. Lack of promotion on a local level. Some clubs and groups may be doing a great job
with that, but most aren't. There is so much that could be done.

3. NEGATIVITY. Now I understand that the older a person gets, the grumpier they get
and that in and of itself must be justification for that. Would you want to involve yourself
in something where you are constantly told you are a bad or lesser person, even before
you put a signal on the air? I don't think so. About the only case where this actually may
be true is the Christian church. We need to show ourselves in a professional and positive
exterior appearance.

4. Education/Elmerism is just not there as well as it should be. From a local standpoint
our local clubs could be doing a hell of alot more promotion in the educational arena.
With over 200 schools from elementary to colleges in our Tri County area, one person
could make a full time job out of going to these schools and doing presentations, assisting
with school ham clubs, and training and testing. Sure, a person needs to learn this stuff
on their own, but with reading and reading of the material may not make sense until a
person either sees the material in action or explained in a manner by an Elmer who can
teach. A person can practice the code tapes etc all they want, but they need to have
someone teach the intial characters to them. Also, the training methods of the 50's may
not be as effective as other methods depending on the person. Some people are more
visual learners, some are auditory etc. As long as a effective elmer can help with different
ways of training, not only the theory but also morse code, we could have

many more
licensees. As long as the person learns the required material to pass
the sufficent tests,
thats all that matters. As long as a person gets from Point A to Point B
thats all that
matters. (Point B means a sucessfull test session) Any complaining of
"things aren't the
way they used to be needs to be directed at the F.C.C.'s and the mafioso
groups that
control them.

5. The "If you build it, they will come" syndrome. I guess this one
ties into the promotion idea. I have seen clubs and VE groups that offer
test sessions and only get a few testees. (as well as other functions) Just
because we exist does not mean that people automatically come to us.
Constant promotion in a positive way is needed to get people to these
events. Some of these events are ONLY listed with ham circles, (ARRL site,
club web sites etc.) so how does the general public get to know about all
the wonderful things we have access to as hams? One local club I am aware of
does absolutely nothing to promote their testing sessions except for within
circles of EXISTING hams. How do they expect to grow?

There are many other points that could be brought up but I will save those
for a different post. With everything we have to combat for dollars and
time, (internet, cellphones and so on) we need to work harder at putting
ourselves in a positive light. These points can either be taken from a local
or national standpoint.

I have personally worked hard to try to change some of the things listed
above and constantly run against opposition. I am almost to the point of
where I should just sit back, and not care at all, and moan all the time
like the "Grumpier Old Men-Ham Radio Sequel" as that would be a hell of a
lot easier. For some reason I know I won't.

Ryan

I believe in the 40's or 50's but I could be wrong. At least locally it is 56 years old around here where I live. I am the youngest in our club at going on 32 years of age. The next oldest is 36-38 yrs old. Majority are in 50-60 and 70's age brackets.

Dropping the code test requirement in and of itself won't do a damned bit of difference unless the attitudes and practices by existing (living) hams doesn't change as stated in part in a separate post here. We need to promote in positive way. I.E. selling the hobby, to qualified sales leads. People with aptitude, interest and character as to make a beneficial addition to the hobby. The code test is meaningless regardless of rate of words per minute if the people do not know about the hobby in the first place. Competition is already rough as it is for peoples time and money (their investments into hobbies that is) and the lethargy in this hobby will do more damage that raising/lowering/dropping a morse code test regardless of its relevancy to the present time.

Some people are of the idea that the movie "Frequency" was a boost, where I think it was a detriment in some regards. "Nobody uses those things anymore" as stated in the movie bothered me. I thought that if someone within the whole production of the movie who may have been a ham could have injected a little more into the movie as to trigger more interest that would have been great. Yes, I know it was only a movie, but movies do have impact on people. Look at the movie "Contact." Great at the begginning, but I wish they would have some how incorporated more into it..

That brings up a question.... Is there somewhere where it is written about how soon a person MUST upgrade? Since I have seen a select few in here that it seems to be a major point of interest to, I was wondering if there was some type of listing as to when a person MUST upgrade that I may have missed. (sarcasm mode off)

Personally, I believe a person should grow within this hobby at a pace that makes them comfortable. If a person does not want to "scoot" all the way up to extra until later on in their life and not within the various levels of testing requirement changes, that is just fine. I can see that if a person, say for instance, is in the middle of raising kids or some other point in their life that is time consuming, there is nothing wrong with taking a longer time to upgrade. After all, this is a hobby and not a career. It is stated in the Amateur's Code (or somewhere...) that Amateur Radio is supposed to be a PART of our lives, not our WHOLE lives.

Ryan

> amateur radio licensees, yet the ARRL still implies that it
> "represents all amateurs."

The ARRL is only concerned with its membership and is only obligated to them. All other non-member hams are of no concern. Case in point, I tried to get a membership form by calling the 1-800 number. Besides being insulted for not having a credit card, I have been told they have no obligation to send me a membership form since I am not a member. Sounds like a Catch-22 sort of eh?

85. ARRL Newsgroup?

I was thinking about this the other day, but I wonder if there would be any interest in a rec.radio.amateur.arrl newsgroup or maybe even something like rec.radio.amateur.arrl.discussion?

Whaddaya think?

I am not aware of how someone gets a newsgroup started but willing to learn. I would also love to see a alt. or rec.6meter or something similar as well as other bands.

Ryan KC8PMX

Len,
Neither ARRL nor NCI (nor any other "private" organization
has to prove anything. The answer to anyone that either disagrees,
wants more "proof" or doesn't like the internal
policies/process/voting procedures is to simply NOT join
or to quit if already a member. Voluntary association...simple
concept in my book.

> >> >Are there independent, disinterested witnesses to all this "openness

> balances at work in regards to government, a democratic process.

Government vs private organization. Government exists by
decree of the people and the "checks & balances" are there
because the "people" want them. Private organizations exist at
the will of the memberships of each private organization.

> I am asked to BELIEVE that private organizations, NCI or ARRL
> are ALL "honest and above-board." I have no other evidence
> that they are or aren't. Where is the "check and balance," the
> observation of the process? Either organization SAYS they are
> doing honest things and all are obliged to take them at their
> word.

Len, I don't care if you do or don't believe that ARRL and/or NCI
are honest and above board. What difference would it make as to
what you believe in either case?

> Many, many, many politicians and party workers and propaganda
> spinners of all the parties SAY they are all "honest and above-
> board" and some of them are. Unfortunately some are NOT.
> There is seldom any rational basis for determining that ahead of
> time. Everything is taken as an article of FAITH.

Works for me. I learned a long time ago there will
always be nay sayers to anything I say. The old
axiom covers that... You can't please all the people
all the time.

> I will grant you government elections and polticians are not quite
> related to private organizations claiming altruistic motives. You
> will have to grant me acknowledgement that government and
> elected officials of government have a number of independent
> agencies and private organizations observing the honesty of the

> or Ed grant to non-members the same proof of honesty of
> elections and officials of private organizations who do NOT have
> the same checks and balances? I don't think so.

More to the point...WHY does ARRL or NCI owe you
any such "proof" in the first place?

> All the non-membership gets when challenged about the above
> is peevish statements demanding that all accept them "on their
> word" because both are "honest" because they SAY they are
> honest. Sorry, but that is a non-answer, just a variation on the
> "you must believe us becasue we ARE honest" spin.

Sorry, but that IS the only answer you'd get from me.

> >Must be a grand conspiracy. :-)
>
> My challenge on proof and altruism was not based on some
> "grand conspiracy" but of the PERCEPTION of many that
> elections and policy decisions MAY not be as honest as we
> are told.

Perceptions and about a $1 will get you a cup of coffee. If
ARRL, NCI and many other organizations had to worry about
everyone's "perceptions" we'd never get to focus on our
goals.

> A way to counter skepticsm is to misdirect or engage in
> ridicule. Misdirection is to dance away from a direct challenge
> and to point to "all the other great things" the organization is

> possible that both of them can be "right" yet each say they
> are. Ridicule of skeptics is good misdirection, putting the
> onus on the challenger and diverting from the challenge. That
> does not prove "rightness." It is a smokescreen to avoid
> the challenge.

I don't have a clue as to what that all is supposed to mean
with regard to elections held by NCI and/or ARRL.

> >Why Ed, what about all those clandistine phone calls from ARRL
> >to FCC? :-) :-)
>

> >
> >Yup...same old conspiracy theory silliness.
>
> ...and also a sign of a commonplace syndrome of arrogance on
> the part of organization officials or members. This time it is
> ridicule for smug superiority reasons?

There comes a point where, having failed to convince or
where the critic just keeps pushing for their way that every
organization ultimately has to simply say: You don't like,
that's tough...don't join, quit or whatever.

> <snip>
>
> >Kinda reminds me too of the people that complain about judging

Are the WRC issues the "exclusive" domain of ARRL, NCI?
Pursue whatever legal process is available to you. No one is
saying you or anyone else shouldn't do so.

> The ARRL has approximately 170,000 members. The membership
> in NCI is unknown. If either say you KNOW what the feelings of
> either or both members are, you are very foolish indeed or think
> that all can be duped. If the latter then it is a height of true con-
> manship.

I suspect the FCC is quite able to understand that comments from
either organization represents their repective memberships regardless
of what either may say. Interesting too, that from a historic perspective,
the ARRL probably does represent a significant proportion of ACTIVE
hams.

> The ARRL has lobbied for certain amateur radio regulations in
> the past which concern GETTING INTO amateur radio. Quite a
> long time of lobbying and influence with the FCC. Now you are
> implying that the ONLY way to work for getting INTO ham radio
> is get into ham radio first and "work from the inside?"

No one, neither ARRL, NCI, Ed Hare, Carl S or myself has
ever said that the ONLY partipation in such FCC rule
setting should be via those organziations, already licensed
hams or ourselves.

> That is not following democratic principles. That is stacking the
> deck in favor of only one game with little hope for success.

NCI and ARRL both avail themselves of the public and well
established processes for input, comment, etc. YOU are

free to do so on your own. Neither NCI nor ARRL owes anyone
a special forum within their own organization to accomodate YOU or
anone else.

> >Ed, It makes no difference. The conspiracy theory people
> >will believe whatever their fantasies are.
>
> Neither of you acknowledge that perception by others is subject
> to skepticsm. That is turning a blind eye away from criticsm.

Whatever perceptions exist, they don't worry me or in
any way cause me concern.

> Ridiculing skepticsm is not an answer to any challenge.

The "challenge" requires nothing on my part to begin
with. That I state the claim is bogus or of minimal
concern as to not warrant any change in organization and/or
a reply of suffient depth to satisy you my right, it
is NCI's right, it is ARRL's right.

> >Last I checked, there is no law prohibiting anyone from
> >starting another "ARRL like" organization. Now I haven't
> >checked lately, so maybe ARRL got a special law passed
> >through congress while we weren't looking.
>
> A monopoly can effectively tie up available market monies
> for a particular activity. A major portion of ARRL operating
> funds comes from product sales, much more than
> membership fees.

So have the feds file an anti-trust suit against the
aleged ARRL monopoly. Given the availability of
alternative sources of products from other than ARRL,
I suspect the "monopoly" is unproveable.

> QST has had to reduce its size due to a
> shrinking market for amateur radio related products.
> Independent publishers of amateur radio books and
> periodicals have a similar problem. The ham radio market
> is finite.

Economic reality...so what. Neither ARRL, CQ Publishing,
or any other entity owns that total
marketshare anyway.. No monopoly exists, nor has
it ever been so.

> To deny that the ARRL has had a major influence on amateur
> radio regulations in the past is about like denying the sun
> comes up each day.

Who ever suggested the ARRL has NOT been a major
influence in amateur rules/regs. That IS one reason ARRL exists.

It is also why NCI exists.

> Other amateur radio organizations HAVE
> come up challenging the ARRL. Their goals were as lofty and
> altruistic as any of the ARRL but the scene was already set for
> the ARRL and the play went on without them.

So what? No one is guaranteed any success inife.
Have those new organizations been unfairly, illegally
or unethically undermined by actions of ARRL.

> I'd mention "No SSB International" but that never seemed
> anything but a glossy sarcastic jab at early NCI, fueled
> primarily by Jim Kehler's arrogant disdain for those not loving
> CW and DXing. It is no longer visible.

So what....does ARRL or NCI owe that organization
any special accomodation, any support to insure it's
success?

> Eric June had a more
> noble goal of preservation of CW through legislation but lacked
> the propaganda skills to reach any masses. It is no longer
> visible.

So what....does ARRL or NCI owe that organization
any special accomodation, any support to insure it's
success?

> FISTS exists but apparently suffers ennui, only its
> devout faithful attending, failing to attract enough newcomers.

So what....does ARRL or NCI owe that organization
any special accomodation, any support to insure it's
success?

> >> >Are these just one person's observations? No. Hardly. It is a

>
> There is no quantifyable number of those who were not convinced
> and walked away to pursue other recreation. They are still vocal.

They must be vocal in the woods right next to the falling
tree that may or may not make a sound
if no one is there to hear it. Bottom line, again, neither

ARRL or NCI owes any individual answers or replies. IF, as you claim,
enough members or prospective members are unhappy with any
organization, then that organization will eventually fail...so
far both ARRL and NCI seem to be satisfying enough of their
repective memberships that the viability of either organization is not
in question.

> Established small and big organizations do not acknowledge
> their existance. They may be too busy extolling their stated
> "virtue" and "honesty" without quantifying those things.

I don't have a clue what that is supposed to mean.

> >> This reminds me of the guy in rags standing on the street corner
preaching

> >
> >Sinner repent.
>
> Spoken like two Enron executives in 2001, chuckling after
> exchanging high-fives on pulling off another "fast one" on
> their investors.

Your anology is pathetic. The fiscal irrisponsibility of Enron
execs is in no way comparable to the actions, policies or
processes of ARRL or NCI.

> >> I hope you feel better soon, Len.
> >
> >Dittos from me too Len. Frankly, I'm disappointed
> >in the reduction to Len's commentary to such
> >fantasy land exhortations.
>
> Ah, but I LIVE in the real world. Some wish to create a fantasy
> by stating everything they say is "true' and "honest" yet offering
> little substance for their veracity except a necessary Belief.

I repeat...neither ARRL or NCI owes YOU anything. You are not
a member of either organization.

> I was discussing organizations, not indivuduals. Two individuals
> from organizations felt obliged to take things personally and
> to rebut on a personal level to a skeptical challenger. Cheap.

Cheap, only because YOU don't like the answer.

> So, to the private organizations, where is the independent proof
> that all your elections are honest?

You don't like our word on it, then don't join.

Cheers,
Bill K2UNK

I think it would be a neat idea, except for the fact that it would probably wind up being another "Morse Code" flaming group as are most other Amateur Radio spots.

Besides, what would they discuss "there" that's not done here?

Not completely true, Your Detailmissingness. Can't remember? Not
"everyone" in the USA may use Part 95.

(Jeopardy 60 second jungle playing...)

>Irrelevant. To state full details of a life experience falls into the
>"CV" category which is NOT AUTHORIZED by another one-by-two
>Dill Instructor in this newsgroup.

You go right ahead, Your Selfworshipness. Don't use ME as an excuse to
not answer any questions put to you...LEAST of all one's that you can't answer
truthfully! You COULD, but we'd never expect it!

>To parade around extolling the "virtues" of amateurism...(SNIP)

AmateurISH is what rants and railings like this are, Your Uneducatedness.

>Such is also hypocritical to a perverse
>point, claims used solely to satisfy some imaginary "battle" of
>words that exists only in the imagination of the outraged claimant.

If such is "imaginary", then who are you fighting against, and WHY are you
fighting against them if it's not real?

Those voices in your head are a bit loud, are they?

>Does "interest in radio" equate JUST to amateur radio? No, nor
>should it, in my opinion. Must "interest in radio" be "demonstrated"
>to a "community" by acquisition of a legal amateur license? No.

No, you don't "have" to get a license, Lennie.

You HAVE lied to us though, on several occassion, and said you were. You
have not. We are not surprised at your inability to get one, however.

Furthermore, one cannot make an INFORMED decision without some experience
base upon which to make it. It has been conceeded by almost all here that you
are "smarts" about the inside of the box. However THAT is where your frame of
reference stops.

>Such is the self-imposed "requirement" of the fanatics, the ego-
>driven, the irrational credentialists who have confused a hobby
>activity done for recreation and enjoyment to some all-embracing
>lifestyle.

For some, it IS a lifestyle, and I think that's one of the things that galls you. Friends, picnics, hamfests, contests, and on occassion, even some "lernin' an a smartin'" happens.

All without 14 years of night school to do it.

>Some discount all of the preceding even though it is established in
>the real world, the bigger world of all radio. Those who wish to say
>otherwise live in another world of fantasy contained in their
>imaginations and quasi-religious beliefs.

Oh, there's some "discounting" going on here...Mostly by a deranged little old man in Southern California that stalks Amateur Radio operator newsgroups and insists he knows more about Amateur Radio than licensed operators do. He sit's behind his keyboard, dying and decrepit, lashing out at those who he would have called "friends" save for his own reticence and cowardness. What a waste.

>They are gods. Mere
>mortals may not argue with gods. They are superior.

Only when you are used as the milestone, Lennie. Only when gauged against you.......

>Sorry but, according to the dynamic duo in here, "I either know
>nothing about amateur radio" or I "lack the necessary moral virtues
>of proper attitude towards amateur radio."

If I am one of the Dynamic Duo you refer to, this is not true. I HAVE stated that you do not have an experience base from which to draw an INFORMED opinion about AMATEUR Radio matters.

This is not untrue. You are not licensed...You do not, by your own admission, participate in any organized Amateur Radio organization or program, including the ARRL, and refuse to do so at ANY level.

I have never seen anyone so proactive in his own ignorance as you, Lennie.

Consider the influenza epidemic of 1918. It killed 850,000 Americans
and 25 million people worldwide in one year. Some estimates range as
high as 37 million. Here in Philadelphia, 158 out of every 1000 people
died.

DNA evidence shows that the so-called "Spanish flu" was a mutated swine
virus.

>- our government continues to legislate and impinge upon civil liberties
>over it

Which one's, Kim?

Were you unable to vote today?

Did anyone refuse to hire you because of your gender or predisposition to
an "alternative" lifestyle?

Did a police officer not inform you of your right to legal representation
after he (since we no longer allow women officers) arresetd you?

>- patriotism has become the new measure by which we accept each other (yes,
>that is a bad thing)

I don't believe you really mean this. You can BE a patriot and still
disagree with "the system". And I DO consider someone based upon THIER frame
of reference to what thier views on America are.

>And that probably just scratches the surface. Internationally, financially,
>emotionally, this disaster continues to spread out like a nuclear blast.

And unfortunately there are a great number of people who made comments to
the like of "it will take an act of war or grand act of terrorism to get them
to wake up..."

They were right. Unfortunately, what we consider as "rights" are NOT
really "rights". They are what society THINKS are "rights" at any given moment
and are subject to change by vote or convention.

Even more unfortunate is that had we been "riding herd" on some of these
groups a long time ago, WTC 9/11 would have never occured. Yes, some
individuals may have gotten thier individual toes stepped on in the process and
that is unfortunate. But look at what FAILING to invest in our security did to
us.

You are right, Kim. The dust hasn't settled yet. The financial fallout
will be years in settling. Families have been torn apart and billions of
dollars wasted that could have been invested in our future and wellbeing.

Can you honestly say that all that was lost is worth it since, along the
way, someone didn't get hassled by a federal investigator trying to make sure

this could never happen?

Our "security" and our "rights" are fluid concepts. Only the Bible has rules in it that are supposedly unvioable, and those are the one's we seem to break most often. What makes anyone think anything written by the hand of man is so sacrosanct?

So you want a million bucks for doing what you say is a trivial
task for new hams? Do you think what new hams are doing is worth
a million dollars? If it is as trivial as you say, why is it worth
a million dollars? Let's settle on an actual amount to see what
new hams are doing is really worth. What is the minimum number of
dollars you would take to memorize 1000 Russian words?

But you *really* don't know, do you? You've never approached the question pools
from
a perspective of not knowing anything about the material, yet faced with
determining the
best way to get the license. From that perspective, for most of the pool questions,
learning
the material is NOT easiest path. Non-licensed applicants soon learn that, and
proceed
accordingly, as some have stated clearly here. (wonder why you ignored that?) Those

who have a technical background do indeed find it lots easier to learn the
technical
principles behind most of the questions in the pool. But for some reason, you and
some others
insist there is no other way to do it. Strange. But maybe not so strange, it took
awhile as a VE
for me to learn about it.
I realize you'd like me to try to keep under the table so that newcomers won't
know, and
will be *forced* to to through all the hoop-jumping to learn the background
material. Sorry.
It's not up to me. I learned about it from them. They already know.

> >For all those who actually learn the material, hooray for you.
>
> Now you're talking, Dick. Such a turnaround.

NO turnaround whatever, I've always applauded those who learn. Why can't you
get used to that fact? Because I explain the method that most non-technical people
use to get a ham license doesn't mean I advocate it, in fact quite the contrary, I
decry the

fact that it is possible.

97. Re: ARS Licensing in the USA Since WW2

A Brief History Of Amateur Radio Licensing In The USA Since WW2 (1946-2002)

by N2EY – Part 2 of 4

Growth and Evolution (1957 - 1963)

By the mid '50s several trends in ham radio were clear. There was continued rapid growth in the number of amateurs. The popularity of SSB, RTTY and VHF continued to increase. New modes and operating methods such as SSTV, ATV, moonbounce, and amateur radio satellites appeared. The trend towards manufactured and kit equipment continued.

In the late '50s the first manufactured HF SSB transceivers aimed at the amateur radio market appeared. While the idea of a complete integrated station in one box with shared circuitry not new, and homebrew transceivers had been built by a few skilled hams, the new HF SSB/CW transceiver caused many more changes than were first apparent. Most importantly, they paved the way for SSB to displace AM as the premier voice mode. For a little more money than a good receiver, a ham could have a transceiver with the effective power output of a much larger and more expensive AM rig. Transceivers were also small enough, and attractive enough, to find their way out of the basement or attic and into the den or living room of many amateurs. Though simple to use, their electrical and mechanical complexity meant that only a few advanced homebrewers would even attempt to build them. SSB transceivers were soon followed by separate receiver/transmitter pairs designed to work together, and able to transceive or work separately. Transistors began to appear in amateur gear. The first amateur satellite was launched in 1961, and the first 2 way amateur moonbounce QSO occurred that same year.

In 1958 the FCC announced the creation of the Class D Citizens Band (CB) service. Class A and B CB had existed since 1948, using frequencies in the 465 MHz region, but had not attained much popularity. The 11 meter band was withdrawn from amateurs and reassigned to this new service. This change was opposed by many hams, but the FCC saw the need for a new service, and rejected all opposition. 11 meters was never an exclusive amateur band by treaty - US hams had it on a secondary shared basis.

From 1957 to 1962 there existed a set of regulations commonly referred to by hams as "Conelrad". Hams were required to monitor a local broadcast station at intervals of 10 minutes or less whenever they were operating, and if the broadcast station went off the air due to an emergency, hams had to leave the air as well.

During this time the number of hams in some districts became so great that new prefixes were needed, and six-character permanent callsigns of the form "WB2LGJ"

began to be issued in those districts.

The licensing structure remained basically unchanged through this time period, as did the bands available to hams. Technicians gained access to 2 meters in this time period. The number of US hams exceeded 250,000 by 1963, about three times the total of just 15 years earlier. This figures out to an annual growth rate of about 7%. Most amateurs had General or Conditional class licenses. There were about 40,000 Advanceds, all of whom had obtained their licenses before December 31, 1952, when the FCC stopped issuing new Advanceds. Novices and Technicians numbered about 10,000 each, but only a few (less than 4,000) hams had Extras.

Incentive Licensing (1964 - 1969)

In 1958 the FCC began to rethink its late-1952 decision granting all privileges to General class amateurs. They noted that homebrewing and experimenting were decreasing, phone operation was increasing, and the technical knowledge and operating skills of many amateurs seemed mediocre at best. It's also possible that the unexpected launch of Sputnik by the Soviet Union in 1957, and the Soviets' early space triumphs, led the FCC to think that American amateur radio needed some kind of change in the licensing area.

At that time, many new hams followed a fairly straightforward path. First, a new ham got a Novice license, and set up a simple station, often with homebrew, secondhand, or converted surplus gear. The Novice year was marked by rapid learning and improvement of skills - it had to be, because if the new ham did not upgrade before the license term ended, he/she would be off the air until a higher level license could be earned. Most new hams upgraded to General or Conditional, but some went to Technician. However, once the General or Conditional license was passed, many hams bought new manufactured gear and lost interest in increasing their skills or technical knowledge. The FCC thought this was a problem, and began to inquire about ways to change what they saw as an undesirable trend.

The ARRL responded in 1963 with a simple proposal: Reopen the Advanced to new applicants, and restrict the 75, 40, and 20 meter phone bands to Advanced and Extra licensees. The idea was to add one more step on the ladder from beginner to full privileges, and thus extend the learning time and raise the level of knowledge required for an all amateur privileges license. The concept became known as "Incentive Licensing".

The FCC responded with a general call for ideas, and was deluged with responses. No less than 10 proposals were given RM numbers by the FCC. The FCC combined features from many of these proposals and came up with a complex plan.

The HF bands would be divided into segments, or subbands, with some segments reserved for Extras, some for Advanceds and Extras, and some for all classes General and above. 6 meters was also slightly involved. Novices would be unaffected by these changes, and Techs were only affected by the change to 6 meters.

One particularly unpopular feature of the FCC plan was the replacement of the Advanced license with a new "Amateur First Class" license, with a new

16 wpm code test and a new written test. FCC proposed to demote holders of the Advanced to General. This idea was finally dropped due to stiff opposition from the amateur community, including the ARRL.

Several proposals and counterproposals went back and forth, each with different features, all hotly debated. Finally in 1967 a final plan was announced. Enacted in two phases, much of the HF spectrum available to holders of General and Advanced class licenses would be withdrawn from their use. The plan as conceived by the FCC is shown below. Only the affected bands are shown.

Phase 1 Incentive Licensing plan - effective Nov. 22, 1968

Extra Class Only: (all frequencies in MHz):
3.5-3.525 CW 3.8-3.825 Phone 7-7.025 CW 14-14.025 CW 21-21.025 CW 21.250-21.275 Phone

Extra and Advanced Classes Only:
3.825-3.85 Phone 7.2-7.225 Phone 14.2-14.235 Phone 21.275-21.3 Phone 50-50.1 CW

Phase 2 Incentive Licensing plan - effective Nov. 22, 1969:

Extra Class Only: (all frequencies in MHz):
3.5-3.525 CW 3.8-3.825 Phone 7-7.025 CW 14-14.025 CW 21-21.025 CW 21.250-21.275 Phone

Extra and Advanced Classes Only:
3.825-3.9 Phone 7.2-7.25 Phone 14.2-14.275 Phone 21.275-21.35 Phone 50-50.1 CW

In addition, anyone with 25 years as a ham and an Extra class license could get a 1X2 call.

Opinion on this change was deeply divided. A very slight majority favored the plan, but many opponents felt cheated and had bitter resentment towards the FCC, ARRL, or both. There was a feeling among some that they had the "right" to all amateur privileges. Some left ham radio, but most grumbled but set about getting a higher class license, to get back the lost privileges.

The trends in amateur radio did not change, however. More and more hams bought, rather than built, their stations. HF SSB voice operation continued to increase in popularity, while AM declined and CW stayed about the same. RTTY and SSTV continued to progress, but the expense and complexity of those modes, and the lack of commercially available gear limited their appeal. VHF operation became more popular as compact transceivers for 6 and 2 meter AM were produced by several manufacturers. There were also a growing number of VHF/UHF stations on the air using more advanced equipment, usually homemade.

In 1964, the FCC imposed fees for amateur licenses (except the Novice). A new or renewed license, or any exam except Novice, cost $4, a modification cost $2, and the very limited "vanity call" program cost $20. Fees were charged whether or not the applicant passed the test. While these fees may seem nominal today, in the early '60s they represented a significant amount of money.

This time period also saw changes to the procedures for exams by mail. The distance requirement for a Conditional license was extended from 75 to 175 miles, and more exam points included. The procedure for Novice and Technician licenses became longer and more complicated.

First, you found a volunteer examiner to give you the test, as before. The volunteer examiner gave you the code test, and when you passed, sent the proper forms to the FCC certifying that you had passed the code and requesting the written exam. There was typically a six to eight week wait for the written exam to arrive from the FCC. The written exam was sent in a sealed envelope, and the volunteer examiner acted as a proctor only - he/she wasn't supposed to even look at the exam. The exam was sent back to the FCC for marking, and you had another six to eight week wait to find out the results. If you passed, your new license came in the mail, and you could go on the air as soon as it arrived. If you failed, you had to do the whole thing all over again. The process typically took about three months to complete if all tests were passed the first time.

In addition, the Advanced and Extra were available by mail, but only to those with a physical disablity that prevented them from appearing at an FCC office.

In 1967 the Novice license term was extended to two years. This came about due to concern about too many newcomers dropping out because a year was too short a period in which to learn all that was needed to upgrade. Novices lost 2 meter voice privileges, but retained CW privileges on 2. In 1969 the FCC revised the "one time" provision of the Novice so that anyone who had been unlicensed for at least a year could get a Novice. Also, simultaneous holding of Novice and Technician licenses was prohibited.

After more than a decade and a half of rapid growth, the number of US hams stabilized at about 250,000 in 1964 and stayed at about that level for several years. By 1970 there were about 270,000 US hams.

In 1968, amateur access to 160 meters was increased significantly. US hams got access to 1800 to 2000 kHz - but still subject to complex geographical and power limitations.

In this time period the use of transistors and integrated circuits became increasingly common in amateur equipment. Digital logic began to be used for a variety of purposes, from CW keyers to frequency counters. This period also saw the appearance of Japanese amateur gear in significant numbers.

Dick,
define what you mean by "gluehead" (unless you are implying that I am either a user, or abuser of glue products that contain <among other things> tolulene, etc.).

also, what issue of credibility are we talking about here?

I simply pointed out a case or 2 that happened here roughly 8 years or so ago and the problems (albeit abreviated) that such caused.

/RANT on

as a side note, have you ever considered the kind of problems that can be caused when ones Identity is "hijacked"? taking anothers callsign may appear to be "small potatos" to you (and a few others here) but its just the first step. with that call, one can find out other info from the FCC database (such as date of birth, SSN# and full name). with *THAT* information, one can then access credit reports, drivers lic. info and a myriad of other important information (thus effectively hijacking a persons life). There are cases where this has actually happened (bank accounts go missing, new credit cards issued, old ones cancled, etc.).

In a small number of cases of this type of identity theft, the victims are "killed off" when the identity ceases to be of use (thus causing the victim even more trouble as he/she attempts to prove they are still alive, etc.).

Believe me, you don't want to be the end-recipient of such an action (believe me, I have seen the results of such and it is not pretty).

if you think "that will never happen to me", then you might be right. However, just remember how easy it is to gain information via todays computer networks (let alone what some well meaning civil servant will provide with just the right prodding <its called "social engineering">).

/RANT off

now that I am done with my soapbox, what is your point, really?

Technomage

<<SNIP>>

Nice try. Both 3898 and 14313 are available to general and higher classes of tickets. Although I do not believe in the necessity of Morse, I'm beginning to realize I might have to use CW on HF just to avoid both unlicensed individuals, folks such as you mention, and you as well. For what it is worth, in 1993 I had no license either. One sitting - that was it. The 20 words per minute wasn't fun, but then I had no license, no practice, and no CW since 1969. Since you seem to believe that 14313 and 3898 are extra portions of the band, one tends to question how well you did on your exams you have already passed (but, of course, you don't need all of 'em right).

Here are some numbers to think about. These are the number of unexpired
FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of February 28, 2002:

Novice - 39,507 (decrease of 9,822)
Tech - 236,643 (increase of 31,299)
Tech Plus - 82,985 (decrease of 45,875)
General - 138,824 (increase of 26,147)
Advanced - 86,171 (decrease of 13,581)
Extra - 98,891 (increase of 20,141)
Total - 683,021 (increase of 8,229)

But the most useful convention is to trim the posting to the points
you wish to answer, and interleave your replies accordingly. In this
way the ng suffers neither of disadvantages of the other.

I would have thought that someone who claims six or more years in
usenet just might have become aware of the third option before now.

I was referring to mange; if the shoe fits, by all means wear it.

You don't seriously expect unidentified opinion to be given full weight.
Shirley you jest.

Looks like there may be a good many Tech+'s upgrading
to Extra like Carl did. Think so?

Top posting is a recent trend brought about by a design oversight in a
widely distributed email/usenet client coupled with lazy users who
don't understand the concept of trimming quotes in their replies.

Bottom posting is and always was the Usenet convention.

Dick is in charge of enforcing those things about ham radio that are not
covered in the FCC rules.

Dick, can you tell him how long he is allowed to be a ham before he must
upgrade and what penalty will be imposed on him if he doesn't?

If a 5wpm exam dumbs a person down, can you imagine what my 13wpm exam did to me? And what the 20wpm exam did to Dick and Larry? Dumbed down four times as much as a 5wpm ham? :-) Ed, you must have had some kind of antidote for the dumbing-down syndrome that Morse code causes.

Certainly one explanation but remember that Pluses are renewed as Techs so they come to expiration and fall off the edge of the Earth.

Of those posting here, I certainly agree. I would note, however, that those posting here
are but a minuscule portion of licensed hams, and few posting here are of the W5TIT
variety in that few of the informationless memorizers like her (her description, not mine)
are represented. Thus it would follow that the large majority of posters here did NOT
do only the word associations as do so many who have no technical background whatever
but want a quick ham radio license. In our day we we, who had no background in radio
technology, found it necessary to start at the beginning, which for most of us that would have
been Novice, do the necessary learning required to advance as the years passed, and
we wound up at least somewhat learned, to varying degrees, in radio technology.
Today, what the are required to do is download the question pool and start making the
necessary word associations, and the license is theirs, after a relatively short but intense period
of memory work. It's fact. Unpopular in certain circles, but true.

Speaking of which, Dick, I sent in a FISTS application and they said
they were reissuing numbers of people who failed to renew their subscription.
By some strange coincidence, I was reissued FISTS number 3939. That must make
us blood brothers.

On 28 Feb 2002 22:25:01 GMT, W1RFI wrote:

>Not necessarily so. I believe under the convention used for aircraft
>identification, some of the combinations can duplicate amateur assignments.

I went around with Gettysburg, Washington, and the FAA on that
about 10 years ago at the request of California DMV who was holding a
request for "personalized" auto plates based on an FAA tail number
that was identical to an amateur call which the applicant did not
hold.

What it comes down to is that the FAA issues "tail numbers" for
aircraft identification, starting with the letter "N" followed by a
numeric or numeric+alpha string. This is not a radio license or
call sign. The pilot of said aircraft can use that tail number
INSTEAD of an FCC-issued call sign for radio identification, the
same way that a pilot of an air carrier aircraft can use the name
and flight number of the operator (airline).

If one presses the FCC to issue a call sign to an aircraft one gets
a five-letter call sign where the last two letters are not FM, TV, DT,
CA or LP (those combos are used for broadcast station call letters).

>> So, for example, would a person identifying
>>themselves to an emergency organization as a Ham, by supplying a bootlegged
>>callsign as proof, a crime?
>
>I will leave that for the lawyers to unravel -- or ravel! :-)

In most jurisdictions knowingly making a false statement in an
official matter is a crime, and the defendant upon conviction can ve
fined, imprisoned, or sentenved to do "community service".

In local or state courts, "community service" usually consists of
spending the weekends in an orange vest and hard hat along the
freeway building up a good suntan and muscles while appearing to
pick up trash. In Federal cases, though, "community service"
usually consists of cleaning bedpans in the Veterans Hospital - a
much more meaningful occupation for those who make false statements.

Agreed, but I believe that 'top posting' is also brought about due to
it being the norm for email. Thus for many email users, unused to
newsnet, it seems strange and inconsistent to bottom post.

Oh, I don't mind for casual conversation - I'm just curious. I just heard the rain report ... seems some ARRL VECs were caught allowing folks to cheat. Ok, so someone doesn't want to know code yet wants a license; at what point would you consider someone 'not qualified' to hold a license? Should they be required to spell their name correctly? I assume they should provide their street address, hopefully without error. Or, perhaps as someone in the rec.radio.cb group suggested, 50% should be passing. So if you can spell your name, you pass; if not, getting your street address should allow you to pass? I admit that the purpose of the amateur license should be to encourage folks to experiment in electronics and communications, but I also have to assume that they should be a potential help to the community. This (at least to me) would require some basic knowlege of electronics, the ability to put up some kind of a makeshift antenna that can radiate, and at least enough knowlege to keep themselves out of trouble when working on higher power devices (or the 110 mains). Believe me, I am NOT of the mentality you assume on the part of the extras; however, I will ask you this - just what kind of knowlege do you think one should have before being issued a ticket? I am serious about this.

Simply because that for the job that they do, CW isn't required. You're
talking about local communications on VHF frequencies. It's hard to see
any kind of advantage that CW would have over voice in those situations.
However, it's not hard to see the potential advantage of CW in emergency
communications between stations at large distances.

Cecil:

I can rote-memorize the complete study manual for the FAA written
exams to be a pilot. Does that mean that the exams are too easy?
Keep in mind, there is a lot more at stake when flying an airplane
than there is when kerchunking a repeater. I am not one of the
aforementioned doomsayers. I'm the doomsayer who wants to keep
the code test.

Dick:

Memorization is an important part in the learning process. Just *how*
important will vary from individual to individual -- we all have differences
in long-/short-term memory capacity. Four semesters of college German
showed me very clearly that the only to get a working knowledge of
all those nouns and verbs is to just drill a hole in your head and pour
them in! To aid in the learning process, we also reinforce our memory
with mental exercises involving the material just learned, thus creating
even more neural connections leading to the correct drive, directory,
and binary file. However, it all starts with memory, and you've either
got RAM, or you don't.

I've never signed on to the notion that rote memorization of Q&A's
is in any invalid as a learning process for ham radio licensing, or
anything else. If you don't believe me, go ask John and Martha King.

GREAT IDEA! They used to have them - they were called
"copying bees". Various stations would transmit long messages
at various speeds, and the goal was to copy them correctly. They
would occasionally toss in a misspelled word or ungrammatical
sentence just for fun. Score was by minimum number of errors.

Today we do something similar, only they're called DX test, SS, Field Day, etc.
;-)
>
>Many hobby pursuits encorage "excellence" by

Yup. Even though some folks might disparage such efforts, calling
them "electronic paintball wars" and such.

Reviving the "copying bee" is a GREAT idea, Bill! Thanks!

I would have to believe them both to be trustworthy in order for me to believe what they say about themselves. I believe neither. Oh, and ham radio *is* what I am talking about--not just CW. Ham radio is probably all they're both good at...although I even have my doubts about that.

I for one vote for either a mail group or a "reflector" type list a
la Yahoo -- something that I can automatically download and
read off-line with my text-based reader, not with a browser.

My greatest fear is that it will turn into a "The League is for
S**T" forum.

Just for a start, because you'd have to read the whole Act to find
everything uncomfortable about it, how about the ability of the government
to now "scan" our discourses on the interent; listen in on phone
conversations; hold people in custody for much longer a period of time than
is even reasonable...

When there's a entity in power out there that begins making decisions on what I say--whether intended as a joke or perfectly serious--and is given leeway to begin scanning what I say, I get real nervous. I don't think any entity in power should have that latitude. Maybe if I'd always grown up and lived under dictatorial type governments the concept wouldn't bother me so much.

>as you fail miserably to make any valid point, as usual.

Not quite, Kim, since *you* were the one who chose to make a fool of
herself with an embarrassingly churlish Vanity call sign.

>> Any points made in this newsgroup which place you in a negative light, are
>> gratuitously provided by your own self.

>So, uh, wait a minute. You say I make points in this newsgroup which you
>say place me in a negative light. BUT, you make points in this newsgroup
>that...what? Make you look good? ROFLMAO....Hysterically I might add.

How I "look" in this newsgroup will always depend on the point-of-view of
the reader. Unlike yourself, I'm mature enough to understand and accept this
fact of life, and accept the reactions I receive, positive or negative, in a
manner
which helps me reflect on how I have presented myself, and make whatever
adjustments are necessary to create a more positive image. You don't seem
to be doing that. In fact, you tend to go out of your way to make a fool of
yourself -- and retaining that stupid call sign is only a small part of it.

>> >> Totally wasted keystrokes, Kim, as I don't have any concern for your
>> >opinion regarding the validity of my "points" made here.

>> >Ditto from me to you, Larry.

I shall not lose one moment's sleep over that, Kim dear.

>> Good, since you're the last person from whom I'm seeking any kind of
>> validation -- unlike yourself.
>>
>> (About a dozen lines of Kim's more severe inanity mercifully snipped)

>Rhetoric...your as good as any other conservative groupie. Rhetoric.

And you're as absurdly inane as any other liberal groupie. Keep taking
the low road, Kim -- it seems to take you where you want to go.

So good luck when all the high tech transportation modes breaks down and
you
find yourself barefoot. Just shows where some people have no idea what's out
there waiting for you.
If you really believe the old Stevenson/NCI saw about CW hams being
technogolically
backward it merely shows you're as stupid as he is. HE's the jerk with the
microphone
stuck in his face.(you too?) I'm off doing HF soundcard digital modes.

Does anyone here believe this liar? You don't think he's a liar?

For your info, Old Troll, I emailed the custodian of the lists after your troll of last week,(I'd directly quote his reply except it's on my old laptop and I'm tying this on a new one, and am not about to go to the trouble of copying it off to run on this one). He reaffirmed exactly what I said here. My FISTS number, (3939) is issued for life, and the listings they publish include only those listed as "active", meaning those currently paying dues. As I said, only the dues paying members receive the monthly newsletter,and after a couple years of newsletters I decided I could do without them, and so stopped paying dues. He stated in no uncertain terms that my FISTS number is valid and indeed mine to keep. So Cecil has,again,been caught red-handed in a deliberate lie. This was not a mistake, he flatly lied. He no more received

any such communications from FISTS than he is a 300,000 foot tall female alien.

Right, Dick, after all when FCC incorporates CB into the ARS we will have to consolidate all the newsgroups, also. Cecil has a point.

Indeed it is, and I have so noted. Did you not see that?

> Just *how*
> important will vary from individual to individual -- we all have differences
> in long-/short-term memory capacity.

In the case of those who want a ham radio license but have no technical
knowledge from
which to draw upon nor to build up by studying the material, there exists a
method by
which they can indeed pass the exams, one at a time. It consists of rote
memorizing
word associations so that they can recognize which choice goes with what
question
based on the fact that they have seen them before in pairs and are reminded of
those
associations. No knowledge of subject matter whatever is needed nor any such
need
implied. Now, some months ago Ed Hare posted a few questions from the pool which

had been reconstructed so that it would be very difficult to make those word
association
but those few questions are not enough to foreclose this as a viable method of

obtaining
a ham radio license with little or no knowledge gained from study for that
license.

Get used to it, Larry. W5TiTs=KIM=CB=Ham radio. Before we know, it, FCC
will formalize it all, one license for all in "ham radio" that will be so much a
done deal in advance that not even the lowest knuckledragging CBer can, should,
nor will be able to resist.
Ed Hare says that we drive off newcomers by calling them Knuckledraggers. I
guess,
rather I would hope, he's right, some of them really NEED to be driven off. If
Kim
fits that category in your opinion, well, so shall it be.

Ham radio, RIP. Oh, it'll be around, all right, in name. ARRL will still be
called ARRL
and it will still be chasing the cash and membership rolls increases, regardless
of source..
But facts are facts::: When it has been flooded with the illicit offspring of 27
mcs
it will be ham radio in name only. The beef will be long gone. Much of it already
is gone,
the rest is going fast.

Again; Alas, poor Ham Radio, RIP. We hardly knew ye.

Hi Ryan,

Some good debating points but you've just sealed your fate (so to speak)
in this newsgroup. ;-) As a "happy old man" skeptic of the established
quasi-religion of radio amateurism, I'll comment and draw some of the
fire away from you.

[I can almost guarantee some of the responses you will get since
they've been repeated and repeated and repeated for a quarter
century by the faithful.]

>1. Lack of promotion (a good offense) by our largest psuedo-representative.
>(ARRL)

Saying such a thing is heresy of the highest order, an automatic cause
for ostracism and possible burning at the stake. :-)

The number one excuse for this is "lack of funds and time" and "it is
very difficult to get the media to listen." Other equal-size or smaller
recreation organizations manage to do so.

>2. Lack of promotion on a local level. Some clubs and groups may be doing a
> great job with that, but most aren't. There is so much that could be
done.

The usual response I'd expect there is an angry remark about "MY
club is doing GREAT, we have a BIG turnout, etc.,etc." as if one
local organization represents 50 states and 650+ thousand licensed
US radio amateurs. I can only quantify my own region as a part of
Greater Los Angeles and the San Fernando Valley of that with a
population of 1.5+ million (L.A. County has over 8 million population).
This small place has been a large part of the aerospace and
electronics industry with a goodly percentage of radio amateurs per
grid. About the only way to find out who is who and where on clubs
is to visit the local HRO store branch and hope that someone has
put out some free flyers. The San Fernando Valley has exactly
one HRO. Two other electronics stores sell amateur radio gear as
a sideline, are not in business to promote ham radio. There are, by
mail spam count, four community schools and at least eight other
community organizations...none of them offer any news of amateur
radio organizations. The Los Angeles TIMES, circulation 1.5 million,

might offer a single item of interest of ham interest a year, a freebie notice tucked away and competing for attention with maybe four dozen other groups listed twice every week. The only "easy" way to get information is to know a ham who is active in some local group.

>3. NEGATIVITY. Now I understand that the older a person gets, the grumpier
> they get
> and that in and of itself must be justification for that. Would you
> want to involve yourself
> in something where you are constantly told you are a bad or lesser
> person, even before
> you put a signal on the air? I don't think so.

Heh heh heh heh...having to coexist with lots of grumpy old men for a long time, I can understand your feelings. :-) I don't like them either.

Cheer up, there are many happy old men out there...also avoiding those gumpy old men. They feel the same way you do.

>4. Education/Elmerism is just not there as well as it should be. From a

It's my opinion that much of the "elmerism" is more fish story than actuality. Yes, I believe that there have been one-on-one tutoring situations but more likely the recipient was an impressionable teen-ager and the "elmer" was a family member. Such recountings may be exaggerations due to their nostalgia of a quarter century back. :-)

Finding a volunteer teacher who can actually teach something, anything, reasonably effectively would be a rare treasure find. That's an acquired skill and depends on their experience with different age groups. Different age groups need different techniques. Based on insider information and suggestions I have, it would be a better bet to ask a professional teacher to help tutor a knowledgeable ham in the rudiments of teaching techniques...and to review his/her presentation. Actual teaching is NOT the same as giving a one-hour presentation.

> 5. The "If you build it, they will come" syndrome. I guess this one
>ties into the promotion idea. I have seen clubs and VE groups that offer
>test sessions and only get a few testees. (as well as other functions) Just
>because we exist does not mean that people automatically come to us.

From what I've seen for a few decades the general feelings within the club are simply as fraternal orders and their events are for themselves. I don't find that strange at all.

>Constant promotion in a positive way is needed to get people to these
>events. Some of these events are ONLY listed with ham circles, (ARRL site,
>club web sites etc.) so how does the general public get to know about all
>the wonderful things we have access to as hams?

National events such as Field Day could be promoted far more than it is; it's a perfect propaganda byte opportunity for TV, open-air, mysterious morse code beeping sound over-lay on video, strange radio equipment, etc., etc. I don't think that ever happened here in the L.A. area during the years Roy Neal, K6DUE, was a journalist with KNBC-TV, channel 4.

Bill, you and Ed have been "had" by my recent message. :-)

It was simply a case of "putting on another hat" and "thinking
out of the box" to try seeing what the "other side sees." It was
a "test" and the response was almost predictable.

The technique of role-playing "the other side" is not rare. It is an effective training aid in sales and marketing as well as politics. Lobbying and influencing decision-making is politics, despite an avalanche of noble, altruistic statements and patriotic bunting wearing either "side" brings up. Those whose "side" doesn't "win" generally sit around and grouse and gripe and whine about "dishonest politicians, crooks, etc." when it comes down mainly to imbibing too much sour grapes. :-)

My personal opinions on certain radio regulations generally agree with No Code International's stated policies. They differ with some of the ARRL's past and present policy stands made public by the FCC. Neither I nor any other non-insider knows what is said, communicated between the FCC and organizations in private...yet all organizations insist the public should believe them. In short, each organization expects the public to "owe them" the benefit of any doubt about their sincerity.

Those who are too personally involved with a group, an issue, for whatever reason, become enraged, furious against skeptics for taking an opposing viewpoint. The usual spin disguise for such fury is a careful phrasing of counter-claims of altruism and "service" and "support" to show they are the "good guys."

The ARRL is very good at this, having had a virtual monopoly in the amateur radio field for over a half century. They are self-sustaining in funding through specialty products sales, and as an advertising medium. They employ "professional amateurs." The ARRL retains a legal firm in the DC area and such legal representation is expensive. NCI doesn't do that.

NCI is the more altruistic organization by all public evidence, but they lack the long-term politics experience and a reservoir of spin material. That spin material stock is extensive enough to include spin denying the existance of spin. :-)

>Government vs private organization. Government exists by
>decree of the people and the "checks & balances" are there
>because the "people" want them. Private organizations exist at
>the will of the memberships of each private organization.

"We know this," Bill. :-)

That's only the tip of a very large iceberg.

>Len, I don't care if you do or don't believe that ARRL and/or NCI
>are honest and above board. What difference would it make as to
>what you believe in either case?

I have no idea. :-) A problem in believability is still a problem of believability, whether you or the ARRL wants to acknowledge it or not. An organization needs membership backing of some kind or it loses credibility and influence power with a federal agency.

>Works for me. I learned a long time ago there will
>always be nay sayers to anything I say. The old
>axiom covers that... You can't please all the people
>all the time.

Yes, yes, "You have the strength of ten because your heart
is pure." :-)

The ARRL was founded in 1914 largely on the efforts of Hiram
P. Maxim. Ever since the ARRL has paid him tribute equal
to canonization. The ARRL is very silent on the full history
of US amateur radio's early days, especially the 20-year
reign of Maxim as the League's first leader officer. A number
of radio-interest organizations came up or already existed.
Most dropped away. The longest-lived one is RCA (the club,
not the corporation), founded in 1909, the first ever radio-
interest organization in the world and still in existance.
Does the ARRL acknowledge it exists today?

88 years of the League telling all that the League is responsible
for the existance of amateur radio and other choice gems of
disinformation is a sure guarantee of turning claims into a
virtual "truth" about the history. It's also an excellent base for
brainwashing of several generations of hobbyists.

>More to the point...WHY does ARRL or NCI owe you
>any such "proof" in the first place?

Showing evidence of believability. You will NOT convince
the religious zealots of the PCTA morseodism cult, but you
have the chance of gaining support of the mainstream by
listening to them. Above all you have to refrain from
signs of knee-jerk responses from personal aggravation or
holier-than-thou stances.

Adopting a holier-than-thou attitude may feel very good but
it turns folks away, almost a guarantee to do so. Another
organization has the lock on holier-than-thou-ness, having
practiced it for a very long time.

>Sorry, but that IS the only answer you'd get from me.

"Pride goeth before a fall." Not a good answer to either
skeptics or mainstreamers.

>Perceptions and about a $1 will get you a cup of coffee. If
>ARRL, NCI and many other organizations had to worry about
>everyone's "perceptions" we'd never get to focus on our
>goals.

That begs the question and suspicion about the real goals.
If "focussing on goals" is so easily disturbed by either
positive or negative criticsm then are the goals that worthy?
Or is the goal something else, such as personal for the

organizers, rather apart from the stated goals?

Lots of skeptical folks are suspicious of the ARRL's goals, something evident from in here as well as in other venues. The ARRL of these later years is a combination publishing house, goods reseller, and membership organization. There is a very blurry distinction between those activities. In most instances there is an obvious overlap.

>Do you believe that EVERY phone call, discussion, conversation, >etc between an ARRL person and an FCC person MUST be >reported somewhere?

No. Try to stay focussed. An organization is sustained by believability. Discounting the religious believers, actual proof of what an organization is doing, saying, or accomplishing is only possible from documentation of a disinterested third party. If the organization claims to be doing something and there is nothing else to prove that, the claim is just a claim.

>There comes a point where, having failed to convince or >where the critic just keeps pushing for their way that every >organization ultimately has to simply say: You don't like, >that's tough...don't join, quit or whatever.

Are you taking the ball and going home? End of game? :-)

>No one, neither ARRL, NCI, Ed Hare, Carl S or myself has >ever said that the ONLY partipation in such FCC rule >setting should be via those organziations, already licensed >hams or ourselves.

>NCI and ARRL both avail themselves of the public and well >established processes for input, comment, etc. YOU are >free to do so on your own. Neither NCI nor ARRL owes anyone >a special forum within their own organization to accomodate YOU or >anone else.

As I've said, believability and veracity needs to be established to the membership of any organization...and to the agency it is attempting to influence.

>Whatever perceptions exist, they don't worry me or in >any way cause me concern.

>The "challenge" requires nothing on my part to begin >with. That I state the claim is bogus or of minimal >concern as to not warrant any change in organization and/or >a reply of suffient depth to satisy you my right, it >is NCI's right, it is ARRL's right.

Negative point made. An acceptible answer is simply no answer. Answering in a personal manner can indicate many things to readers.

>So have the feds file an anti-trust suit against the
>aleged ARRL monopoly. Given the availability of
>alternative sources of products from other than ARRL,
>I suspect the "monopoly" is unproveable.

Please note my use of the two connected words "virtual
monopoly" throughout. The "feds anti-trust suit" against
Microsoft on "monopoly" charges is being reviewed again.
Microsoft has a lock established on over 90 percent of all
personal computer operating systems worldwide and that
is a virtual monopoly on OSs without stretching anything.
Definitions on a true monopoly are obscured by legal
activities and influences none of the public can see, not
to mention the quasi-religious aspects of believers who
side with or against Microsoft for emotional reasons.
Any corporation that has 90 percent or more of any
market or activity control are generally accepted as having
a virtual monopoly.

>... No monopoly exists, nor has it ever been so.

Denial will not make it what you want.

>So what? No one is guaranteed any success inife.
>Have those new organizations been unfairly, illegally
>or unethically undermined by actions of ARRL.

Was anyone discussing philosophy of "success in life?"
I don't think so. I made no charges as described in the
quote above.

<snip of the first two of identical statements>

>So what....does ARRL or NCI owe that organization
>any special accomodation, any support to insure it's
>success?

That was never implied. Other organizations have existed
for their stated purpose. Their ceasing to exist may be
attributable to many different reasons or causes.

<snip>

>I repeat...neither ARRL or NCI owes YOU anything. You are not
>a member of either organization.

:-) Here we go again... :-)

Ahem, I can't be a voting member of one of them and the other
never accepted my repeated applications. :-)

Just the same, each organization is engaged in lobbying and
influence towards the FCC on matters directly affecting entry
into amateur radio. It is not logical or reasonable to have an
88-year old organization of voting members already entered

controlling, directing, or influencing entry. That is de facto exclusivity, an extension of the attitude of "we know what is best for amateurs."

If NCI takes the same position of exclusivity, that will only serve to deepen the chasm of differences already established between amateurs and the rest of the radio world.

The expected knee-jerk response of others, non-thinkers, is the phrase "this is amateur radio, only amateur!" They don't realize that amateur radio must share EM spectrum and the same federal regulation agency with every other radio service.

>You don't like our word on it, then don't join.

Taking the ball and going home doesn't end the game and disdain isn't a very good answer, is it?

>However, it's not hard to see the potential advantage of CW in emergency
>communications between stations at large distances.

Public safety radio services have frequency allocations on HF,
VHF, UHF, and microwaves. You can see those in Parts 2, 90
of Title 47 CFR.

Please define "large distances." If you are thinking of dredging
up the Titanic disaster and subsequent implementation of the
500 KHz international disaster calling frequency, autoalarms,
and all that using "CW," please don't. The maritime community
adopted the GMDSS to supplant the old manual morse for ship
distress and the ability to send such a signal, along with the
GPSS-derived position information by any bridge officer. No
"CW" skill desired.

For distances beyond LOS and up to 200 or so miles, the NVIS
technique works very well for any modulation or mode on HF
through VHF. Several military land force radios use that
technique in standard communications doctrine.

I will agree that "CW" has great potential in saving the world
during alien invasion emergencies.

NEARLY RIGHT!
Actually it's the opening statement in the _FOURTH_
book in the series, "De Bello Gallico IV". Julius Caesar
was as prolific in his war memoirs as was Churchill.

Remembering back 35 years to my 'O' Level Latin,
and the context we had to learn....

"All Gaul is divided into three parts, the first of which the
Belgae inhabit; the second, the Acquitani; the third, people
who in their own tongue are called Celtae, in ours, Galli.
All these differ from each other in language, in customs,
and in laws".

The other set book we did was Virgil's Aeneid, containing
the famous, "Timeo Danaos et dona ferentes"

Martin <mdwade@mobiletel.com> wrote in message

WRONG! Both top and bottom posting have always
been Internet conventions. Look at the RFC - it specifically
states that bottom posting is a suggestion only and not a ruling; thereby
showing that both habits were extant before the RFC itself
was produced.

Source record: 36168

From: lenover21@aol.com (Len Over 21)

>Neither I nor any other non-insider
>knows what is said, communicated between the FCC and
>organizations in private...yet all organizations insist the public
>should believe them.

Sure you know what is communicated, Len. The law requires that a summary of any Ex Parte communication be filed into the public record. Such summary is required to contain the essence of what was presented. Both the ARRL and NCI Ex Parte presentations were summarized in great detail.

> In short, each organization expects the
>public to "owe them" the benefit of any doubt about their
>sincerity.

There is little doubt that you will take the suspicious stance every time.

>Those who are too personally involved with a group, an issue,
>for whatever reason, become enraged, furious against skeptics
>for taking an opposing viewpoint.

Not at all, Len. I take an opposing viewpoint to ARRL on the code test issue. Perhaps the furor is over the presentation and your need to "put on the other hat?"

> The usual spin disguise for
>such fury is a careful phrasing of counter-claims of altruism and
>"service" and "support" to show they are the "good guys."

I can speak personally to my work at ARRL supporting ham radio. No need for spin there, Len.

>The ARRL is very good at this, having had a virtual monopoly
>in the amateur radio field for over a half century. They are
>self-sustaining in funding through specialty products sales,
>and as an advertising medium. They employ "professional
>amateurs." The ARRL retains a legal firm in the DC area and
>such legal representation is expensive. NCI doesn't do that.

I am sure NCI would if they could. :-) What is your estimate of the percentage of ARRL's funding that is spent on the code-test issue?

>NCI is the more altruistic organization by all public evidence,
>but they lack the long-term politics experience and a
>reservoir of spin material. That spin material stock is extensive
>enough to include spin denying the existance of spin. :-)

That one was a bit too convoluted for me, Len. Of course ARRL tries to present its best side to amateur radio and the organizations it deals with. I see it up close and personal and I have never seen evidence of fabrication.

> The longest-lived one is RCA (the club,
>not the corporation), founded in 1909, the first ever radio-
>interest organization in the world and still in existance.
>Does the ARRL acknowledge it exists today?

Not that I know of. And that is whose fault? There are a number of organizations that ARRL has worked with over the time I have been there, ranging from the FCC to the Red Cross to the W5YI Group. If you are a member of RCA and feel that they should develop a cooperative relationship with ARRL, approach them, and suggest their prez' call ARRL's prez' and see what common ground can be found.

>88 years of the League telling all that the League is responsible
>for the existance of amateur radio and other choice gems of
>disinformation is a sure guarantee of turning claims into a
>virtual "truth" about the history.

For the existance of amateur radio? Of course not, Len. For saving amateur radio's chestnuts often enough to make it worthwhile? I have been "in" on some of that action myself.

>It's also an excellent base for
>brainwashing of several generations of hobbyists.

I will let your fear of brainwashing speak for itself as to the validity of your views, Len. A good place to close...

If you are a newcomer considering entering ham radio, don't listen to this bad advice. This is the hardest way to try to pass the test. It is easier to learn the concepts involved -- they really aren't nearly as hard as Dick is trying to make you believe. And in doing so, you will be helping yourself to make the best of the license you are about to work hard to get.

Here in CT, some of our community-service folks manage to get assigned to our Burlington recycling center. Most are in their teens or early twenties. If they act as if they know they messed up, Jimmy, the Recyling Coordinator, is pretty good to them. If not, the oil recycle bin and dog pound do need occasional cleaning. I like Jimmy, so I often hang around drinking a cup of hot chocolate with him while such cleaning is going on. :-)

>I think what would be a better idea is for the ARRL server to have chat rooms
>like some of the other servers. Whaddaya think, Ed?

They don't let me get to think much about what goes on the ARRL web page other than in the TIS area. But a suggestion to webmaster and your Director is a good place to start. Unfortunately, I fear the answer could be "no" because there would be some who would feel a need to be abusive and insultive to others and ARRL probably wouldn't want its site to be used in that way. If there are many other servers doing same, perhaps that is also reason not to duplicate what is being done well by others.

AND, it has been that way since at least the early 1950's. I had no technical knowledge in 1952 when I rote-memorized/word-associated my way to a Conditional license. That act lead the way to a EE degree and 40 years of engineering so it wasn't all bad, was it?

Actually, in the bad old days they useta require a certain amount of experience
before they'd let you even try! Old Class A/Advanced required a year as a
General or equivalent, Extra took two years. The idea was that experience was
part of the license requirement. All gone in the '70s.
>
>Personally, I believe a person should grow within this hobby at a pace that

Agreed! Also, if a person is satisfied with what a particular license gives
them,
why bother to get privs that won't be used?

>I can see that if a person,
>say for instance, is in the middle of raising kids or some other point in
>their life that is time consuming, there is nothing wrong with taking a
>longer time to upgrade.

Sure. Family, career, all sorts of things can take up the time.

>After all, this is a hobby and not a career.

Actually, it's a service, but even so, the voluntary quality means it's an
at-your-own-pace thing.

>It is
>stated in the Amateur's Code (or somewhere...) that Amateur Radio is
>supposed to be a PART of our lives, not our WHOLE lives.

"The Amateur Is Balanced".

The point I was making, though, was that back in '58 the FCC wasn't satisfied
with what was going on in the ARS. See the thread "ARS Licensing In The USA
Since WW2" for more details.

Do you have to practice at being such an ignoramus, Larry, or is it genetic? As usual, you enjoy being miserable and looking at something from the worst possible angle to put your own miserable reflection upon it. What I am talking about are the idiots that *USE PATRIOTISM* as some kind of yardstick to judge other people. Kind of like using whether someone is the same religion or not.

Kind of like you do with CW.

Cecil,

I'm sure that Dick would LOVE to have the power to "self police"
everyone into learing Morse code. However, he's demonstrated
repeatedly that even if he did have the power, he wouldn't be willing
to put forth the effort to exercise it. Dick prefers to have the
govt.
do his work for him, through the welfare state promotion of Morse
by proficiency test requirements.

However, having said that, the more important point is that Dick
doesn't seem to be able or willing to grasp the fundamental
concept that enforcing some sort of "work ethic" (making sure
that folks have to "work hard, so that they earn their licenses")
is not a legitimate govt. regulatory function. Fortunately, the
government DOES recognize this fact, which really seems to
get Dick all "honked off."

I think that Dick resents the fact that you (Cecil) and I (just as
two examples) didn't really HAVE to "work hard" to pass the
tests ... because we already knew the necessary material.
I can only surmise that Dick must HAVE had to work really
hard to pass his tests, and it really pisses him off that others
didnt' have to expend the same effort ...

I would imagine you've encountered a few of those happy old men if they were unable to avoid running into you. It might be interesting to find out just how many are still "happy old men" after an encounter with you. One can only assume that your street persona is much like the creature we've seen on display here.

Another case of, "I don't have any first hand experience so it must not be true", Len? Such doubt could have been erased if only those of us who found mentors eager assist the beginner had the foresight to document the encounter and to have forwarded proof to you.

> presentation.

Yeah, these things are best left to a professional--let's say someone like you--a guy who could not only teach the basics but actually whip the neophyte into shape. Actual formal instruction on technical material could be interspersed with some of the historical material on other radio services--maybe you could call that portion, "Stuff I gleaned from the internet". I hope you've saved all the past sermons. We wouldn't want new hams to be totally unaware that there are other services with whom we share the radio sprectrum.

>
> 73,
> Ed Hare, W1RFI

I agree !000% with Ed ... it is much easier to study the basic
material and understand the principles of the electronics
theory parts of the exams than to try to simply memorize every
question and the correct answer ... besides, as Ed says, the
```

things you learn will be useful in the future as you use the
privileges you earn by passing the test.

However, this aspect only applies to the theory parts ... things
like rules, regulations, sub-band limits, etc. can ONLY be learned
by memorizing them.

Thus, there are two basic categories ...

theory things where you are FAR better served by learning the
principles that will allow you to solve ANY similar problem
(as opposed to just memorizing the correct answer to a single,
particular example of the problem)

those rules/regs things that can only be learned by memorizing
things like band edges, power limits, spurious emissions limits,
etc.

Ed is right ... don't follow Dick's advice above ... LEARN the
two categories as Ed and I have described above and you'll
know more, be more competent, and enjoy your ham experience
much more ...

I don't know if I've seen a lie from Larry, Dick, or anyone else for that matter. However, I know whom from this newsgroup I would feel is more trustworthy--based on posts I've seen. Larry and Dick are not among them.

Ed,

And I will stand shoulder to shoulder with you to preserve their right
to CHOOSE to use Morse in the event that anyone attempts to ban
the use of Morse. The difference between us and Dick is that we
recognize that Morse is just one of many modes and that not ALL
people need to choose to learn/use it in order for it to survive.

Dick clearly thinks that when the govt. stops making all learn
Morse to get a license with HF privs. Morse usage will rapidly
die. I don't believe that for a minute. I have no intention of
encouraging the "death of Morse (usage)" ... however, if there
is not enough (effective, "honey rather than vinegar") promotion
of Morse by Morse enthusiasts, Morse usage may well drop.
(That is a "problem" for Morse enthusiasts to solve ... and your
[Ed's] approach will be FAR more effective than Dick's.)

As Cecil has pointed out ... if Morse cannot "survive" in a
"free market of modes," that may simply be "evolution."

> On one of
> the QRP lists, we are having a nice discussion about how to
> help the newly minted 5 wpm QRPers with QSOs and fun with CW.

This sounds like a good move from the perspective of (rational)
Morse enthusiasts ... much better than Dick's approach.

> sincerity.

WRONG! The public is free to believe whatever the public
wants. Absent any proofs of illegal, unethical or immoral
behavior, MOST people assume sincerity and honesty...there
are, however, and always will be...the black helicopter
element that sees a plot in everything.

> Those who are too personally involved with a group, an issue,

Welcome to the role of marketing ones ideas...nothing
new there.

> The ARRL is very good at this, having had a virtual monopoly
> in the amateur radio field for over a half century.

The ARRL has NO monopoly...your insistent reference
to monopoly misses the mark as to being able to "keep
a monopoloy" status. While ARRL may be one of the
only games in town, the ARRL has never exhibited monopoly
behavior to keep others out.

> They are
> self-sustaining in funding through specialty products sales,

> and as an advertising medium. They employ "professional
> amateurs." The ARRL retains a legal firm in the DC area and
> such legal representation is expensive.

Are you saying any of that is wrong?

> NCI doesn't do that.

So?

> NCI is the more altruistic organization by all public evidence,
> but they lack the long-term politics experience and a
> reservoir of spin material. That spin material stock is extensive
> enough to include spin denying the existance of spin. :-)

Again, so? More to the point, for lacking the attributes
you claim, NCI seems to have managed quite well working
the "system" exactly as it is supposed to be done.

> >Government vs private organization. Government exists by

> >what you believe in either case?
>
> I have no idea. :-) A problem in believability is still a problem of
> believability, whether you or the ARRL wants to acknowledge it
> or not.

BUT lack of believeability doesn't seem to be a problem for the
membership of ARRL or NCI. Beyond their respective memberships,
what difference does it make?

> An organization needs membership backing of some kind
> or it loses credibility and influence power with a federal agency.

We know this Len :-)

> >Works for me. I learned a long time ago there will
> >always be nay sayers to anything I say. The old
> >axiom covers that... You can't please all the people
> >all the time.
>
> Yes, yes, "You have the strength of ten because your heart
> is pure." :-)

Purity of heart isn't needed. Common sense tells me that
any idea almost never will find favor with 100% of members.

> The ARRL was founded in 1914 largely on the efforts of Hiram
> P. Maxim. Ever since the ARRL has paid him tribute equal
> to canonization. The ARRL is very silent on the full history
> of US amateur radio's early days, especially the 20-year
> reign of Maxim as the League's first leader officer.

80 year old history of an organization has little relavence
(IMHO) on current membership thinking.

> A number
> of radio-interest organizations came up or already existed.
> Most dropped away. The longest-lived one is RCA (the club,
> not the corporation), founded in 1909, the first ever radio-
> interest organization in the world and still in existance.
> Does the ARRL acknowledge it exists today?

WHY should ARRL acknowledge those other organizations?

> 88 years of the League telling all that the League is responsible
> for the existance of amateur radio and other choice gems of
> disinformation is a sure guarantee of turning claims into a
> virtual "truth" about the history. It's also an excellent base for
> brainwashing of several generations of hobbyists.

You obviously read more into such commentary than I do.
At this point, who cares as long as amateur radio prevails.

> >More to the point...WHY does ARRL or NCI owe you
> >any such "proof" in the first place?
>
> Showing evidence of believability. You will NOT convince
> the religious zealots of the PCTA morseodism cult, but you
> have the chance of gaining support of the mainstream by
> listening to them.

I don't see the mainstream being opposed to what ARRL (or NCI)
stands for. A political reality is that people who are content with
what is happening will rarely say anything. Those in opposition,
however, will become to pubic antagonists. Based on that, neither ARRL
nor NCI appear (IMHO) to have a credibility problem with
members, with the public and/or with the FCC.

> Above all you have to refrain from
> signs of knee-jerk responses from personal aggravation or
> holier-than-thou stances.

What holier than thou attitude?

> Adopting a holier-than-thou attitude may feel very good but
> it turns folks away, almost a guarantee to do so. Another
> organization has the lock on holier-than-thou-ness, having
> practiced it for a very long time.

???

> >Sorry, but that IS the only answer you'd get from me.
>
> "Pride goeth before a fall." Not a good answer to either
> skeptics or mainstreamers.

No other answer has been needed. By your own comment
above...this whole dialog has been nothing but a "strawman"
on your part. There appears to be NO issue of credibility
with membership, with the Public or with the FCC on the
part of ARRL or NCI.

> >Perceptions and about a $1 will get you a cup of coffee. If

> If "focussing on goals" is so easily disturbed by either
> positive or negative criticsm then are the goals that worthy?
> Or is the goal something else, such as personal for the
> organizers, rather apart from the stated goals?

Let's see...no one in NCI gets paid anything...most people
in ARRL are volunteers with some paid staff. Just WHO
in either organziation might have a personal goal or hidden agenda.

> Lots of skeptical folks are suspicious of the ARRL's goals,

LOTS????

What goals are any of those LOTS suspicios of?

> something evident from in here as well as in other venues.

Not too evident to me...except for a HANDFUL of vocal
people. As I said, those that agree are generally quiet.

> The ARRL of these later years is a combination publishing
> house, goods reseller, and membership organization. There

The only reason you keep repeating all that is you hope it will prompt me
to shut up and leave. Admit it.
And, I see you ably ignored the meat of my post. Must have been close to a
nerve.

The facts are (AFAIK) *technically* correct .. that wasn't my point
(read on ...)

> The point I was trying to make is this:
>
> Ed keeps mentioning the "4 page study guide" story, but doesn't
> mention the vast difference in privileges granted.

The point that I was trying to make is "times change" and that
the mentality of the past is no longer suited to today's world
in terms of promoting a healthy future for the ARS.
```

"Complaining" about liberalizations in outdated technical
restrictions vs. tests is not the answer.

Recognizing that the ARS needs to modernize constantly
to remain interesting to potential newcomers and to remain
competitive technologically with other alternatives that
compete for people's interest and discretionary time is
something that MUST occur ...

> Fact is, we really don't have an effective entry-level license today.

I don't TOTALLY buy that ... let me list a few comments in
"bullet point" form:

* It is IMHO *very* arguable that without the no code license,
which has become the de facto entry point into ham radio,
and the newcomers that have become hams via that route,
that our numbers would likely have plummeted SERIOUSLY
over the past 10 years.

* I have elaborated on my concerns with the power levels
vs. demonstrated level of technical competence for the
NCT license.

* The main problem in terms of "an effective entry-level
license" IMHO is that we are still stuck, for the relatively
short-term, at least, with most of the newcomers being
relegated to VHF/UHF because of the Morse test
requirement for HF access.

* Once the Morse test is eliminated, it would seem to
make sense to adjust the Tech test to cover HF principles
and grant newcomers much broader HF privs ... or maybe
it would make sense to "merge" the tech and general
classes ... the only problem with such a merger would be
that it might make the step from "unlicensed" to "licensed"
unnecessarily large ... I'm certainly open to ideas on how
the license structure and written test requirements could
best be modified in a "post Morse test" era.

>
> Then, without an NPRM, RM or anything else, in late 1952 FCC opens all
> privs to all hams except Novices and Techs. All of a sudden ol' Mike
> has lotsa new company.

Ah, so I was correct in perceiving him as a "cranky olde fart" who
resented sharing "his" "sandbox" with newcomers who he perceived
were not as "superior" as he imagined himself to be ...

That's why I mentioned him ... because I perceived him as
a good example of EXACTLY THE WORST attitude that
hams should show to newcomers.

> But not with using the written tests to do the same thing. One
> man's "reasonable and relevant" is another's "hoop". Why is a Tech

> competent to run 1500 W PEP on VHF/UHF but only a fraction of that
> on HF, even though the RF exposure hazard is less on HF/MF?

Those are good points ... with which I agree. You know that
I think the Tech test is inadequate for 1500W ... but you seem
in some sense to disagree. I agree FULLY that there is no
distinction between the level of technical knowledge required
to use "mode x" on VHF/UHF vs. HF ... in fact, in some
respects, it is "easier to stay out of trouble" at HF ... particularly
with homebrew gear, because the technical requirements for
stable, clean gear are somewhat easier to meet at HF, due
to circuit parasitics, layout, etc. being less critical that at the
higher frequencies ...

> > That's
> > part of the problem ... you can't keep ham radio "like it was 40 years

>
> Only if the change is for the better. Many changes are NOT for the
> better. The mantra that "change must be accepted" as if all change
> is inevitable and good is simply bogus.

Change IS inevitable in a technically-oriented pursuit ... to ignore
it and not figure out how to make use of new developments can

only result in stagnation and irrelevance as the rest of the world
passes by ...

> > > I have also suggested (with Richard Plourde) a post-S25.5 license

>
> Still in the archives. Seems odd to me that nobody but Mr. Plourde and
> me want to discuss stuff like that.

As I said, I saw some of it, but missed a lot due to business
travel (I don't have time for r.r.a.p. when I'm on business trips,
nor do I have ready, convenient access to my ISP's news server).

I'm sure that there will be more discussion in that direction
in the future, but right now, the focus of my limited time is
on the elimination of the Morse test. Once that is accomplished,
I will have more time to focus on how other aspects of licensing
and testing can be improved ...

> > > One additional fact: Nobody is required to start out with a Tech

> > 13.
>
> I disagree! The new General test is 35 questions from a publicly
> available pool. The 5 wpm can be taken independently (CSCEs didn't
> exist in 1963, either).

OK ... good point ... one doesn't HAVE to do it all at one sitting.
However, the number of questions isn't, IMHO, the defining factor
in the difficulty of the test(s) ... as Ed has pointed out, there's a
hell of a difference between the 4 page study guide he used and
the current one, which if I recall correctly runs about 250 pages!
(Then another one of ?how_how_many_pages? to make the
move from Tech to General???)

I simply can't understand, given the MUCH larger amount of
material one has to cover, how anyone can claim that the

tests are "easier" or have been "dumbed down."
(Not saying that you are saying that ... but rather that quite
a few make that complaint.)

Congratulations on being open-minded, Larry ... I was going to respond
to Cecil's "antidote" quip by stating that Ed's antidote was technical
knowledge.

I'm SO glad that we've finally convinced you that technical knowledge
IS THE antidote to dumbing down (and Morse proficency or lack thereof
has nothing to with "being dumbed down.")

Here we go again with the apparently TOTAL emphasis
on "operating." (as in using a radio to communicate)

> For example, we must identify ourselves on the air using our
callsigns,
> so questions about proper ID involve "absolutely necessary"
knowledge.

Agreed ...

> But one can operate without knowing the difference between a tunnel
> diode and a zener diode, so that knowledge is not "absolutely
necessary".
> Instead, it's part of the hoop.

Here is where our views diverge ...

While I agree FULLY that rules/regs, etc. related to "operating"
in compliance are necessary and legitimate, there are other
aspects that go beyond "operating" in the sense that you seem
to imply, which (no offense intended), seems to equate "operating"
with what I would term "appliance operation."

The other aspect to OPERATING is having the requisite technical
knowledge to recognize problems, know how to correct them, etc.
in order to avoid interference and assure compliance with the
technical aspects of the rules ...

> I would venture to say that there are more hams on the air today
using
> Morse/CW than there are hams using homebrew rigs. Yet a technical
> knowledge test is held up as a "reasonable and relevant" requirement
> for an amateur license while a basic Morse/CW skill test is not.

First, Morse proficency is a matter of whether you choose to
use the mode (or not). I would assert that a person who doesn't
choose to use Morse will cause no "problem" by not knowing how
to use it ... however, a person who doesn't have sufficent technical
knowledge to recognize and correct (or at least cease operation
of a malfunctioning transmitter until the problem is corrected) DOES
present a potential problem by causing interference to other hams
and other services. The fact that we are a service where we are
permitted to make all sorts of adjustments to, and even build, our
own transmitters REQUIRES that we have knowledge of at least
basic levels of "how it works," "how to detect when it's not working
right," etc.

Now some will assert that a person who has not demonstrated
a high level of Morse proficiency will "make a mess of things
on the bands." First, if someone has not chosen to learn
Morse, they probably won't be using it, thus, "no problem."
Even if they do decide to learn it, even "on the air" as "OJT,"
I don't see this as a big deal ... for decades, novices have been
allowed to start with a minimal level of proficiency and "learn
by doing" on the air ... I'm not aware that this has resulted in
"the end of the world as we know it." :-)

Sure it is ... PARTICULARLY since that's NOT the type of service
that the emergency management folks WANT.

They couldn't care LESS about NTS-like "radiograms", etc. They
want tactical voice and data communications ... not Morse.

The entire argument that "Morse is essential to emergency
communications" is SO bogus that it's ridiculous, thus it
doesn't hold water as "justification" for continued Morse testing.

I have no difficulty with this as long as the concept of "operate" includes the fact that the rules permit a ham to design and build a transmitting device and put it on the air.

Operating IS what it is all about, Carl. Anything else we do relative to ham radio can be done without an FCC license.

Do you really think that DE <callsign> is as much exposure as paragraph after paragraph discussing that callsign? Or making up cute names for her using that callsign? You chose do do that, Dick, and you chose to give it exposure by posting it.

Is this another "she made me beat her" sort of thing?

I don't care where you learned it, Dick; you are giving advice to newcomers that is setting them up to fail in ham radio. I disagree with you; it is not best to try to use word association to pass the tests. It isn't even the easiest way.

The Extra exam was a snap for me but I did have to work relatively
hard to memorize all the word associations for my Conditional in
1952 when I was 14 years old. Memorizing the schematics was fairly
difficult for me because I didn't know what the components really did.

Ed,

I *think* we're probably "on the same page" but using different
semantics ...

Yes, I can design and build a rig without having a license. But,
why would I do so unless I intended to operate it? THAT, we
agree requires a license.

The point I was trying to make is that there is more to "operating"
just "geting on the air" ... and it DOES include the need to have
knowledge not just on rules/regs/practices, but ALSO how to
prevent, avoid, recognize, and correct technical problems that
could cause interference to other services or other forms of
non-compliance with the rules. That aspect REQUIRES more
than just the parts of the test (rules/regs/band limits, etc.) that
can only be memorized ... it requires understanding of the basic

technical principles of how/why radio works. THAT is why the
technical content in the written tests is legitimate and justified.

With this attempt at clarification, do we agree??

Subject: RE: Professionally Printed and
mailed eQSL's
Hi Rich:

Something does not sound right here. You are
saying that Dave is physically mailing out QSL
cards by the US postal system? This is news to
me.

If you are my QSL manager and I send you my
logs by e-mail, I am sending them direct from
point A to point B. Just as if I was sending them
to you by regular mail. This is OK. I remember
somewhere several years ago that some people
used to get their logs over the air on RTTY and
another digital mode (AMTOR I think). Not a
problem.

However, if as the result of a log being sent to
E-QSL, someone goes in and receives a card
electronically and uses it for DXCC, that
e-QSL cannot be accepted for DXCC credit
under rule 2. I spent a bit of time with a simple
shareware program to prove the unreliability of
that method.

However, if Dave, acting as QSL manager
with station logs completes a card (even
one from his printer) and sends it by mail to
you, this is an acceptable exchange and we
have see this often for several years now.
(assuming he phyiscally checks the log). Many
people use self-made cards from their printer.
Each one is evaluated on a case by case basis,
and many times under Section IV rule 4(b) we
have conducted an audit to insure the vaildity of
a card like this.

In cases like this it would be REAL nice if they
used a stamp or placed their initials or signature
on it, but this is not required by the rules.
However, this issue has been discussed and has
been given some consideration.

To clarify, if Dave is sending out cards
through the US Postal System as the result
of the log(s) he receives, this is OK. (This
would basically be operating as QSL
manager).

Regards,

Bill Moore NC1L
DXCC Manager

>
>Sure you know what is communicated, Len. The law requires that a
>summary of any Ex Parte communication be filed into the public record. Such
>summary is required to contain the essence of what was presented. Both the
>ARRL and NCI Ex Parte presentations were summarized in great detail.

One may argue the "summary" and "essence" but that is still a subjective viewpoint when there is no confirmation to the exact presentation from a third party.

Skeptics have justifiable fuel for suspicion from several areas. As an example, take the minutes of the IWG-6 concerning Agenda Items 1.7.1 through 1.7.3. The September 2001 minutes were not posted until FOUR MONTHS LATER. The January 24, 2002 meeting minutes were not posted until March 1, 2002. The "scribe" for IWG-6 is allied with the ARRL.

The first indication of the USA FCC preliminary position on Agenda Item 1.7.1, the most important one for amateur radio in that it has the basic changes to S25, has not been supplied to the public until 30 November 2001. That document is one of a series that contains a collection of different Informal Working Groups' recommendations as they have been (presumed) completed. That document was not referenced by either the ARRL nor NCI; an official of NCI made a vague reference to it. I supplied the exact reference and mentioned that the IARU "takes credit" for originating the removal of the morse code test as a requirement by adminstrations.

The public may view the USA-FCC Preliminary Views and Draft on 1.7.1 in a document released 21 February 2002 which may be accessed through the FCC IB WRC-2003 pages under "US Preliminary Views" link page. The titles of the document links specifically state the Agenda Item covered. The Agenda Items specifically for amateur radio at WRC-03 are 1.7.1, 1.7.2, 1.7.3.

The document concerning 1.7.1 gives a synopsis of the code test issue history beginning with WARC-1995 through all the World Radio Conferences, culminating with recommendation for WRC-03 and the Recommendations of ITU Working Group 8A. "Credit" for the formulation of it is again given to the IARU but there are some changes in this preliminary view relative to the one released on 30 November 2001. There is no publicly-released information on how those changes were enacted nor of the parties various actions in regards to those changes.

What appears in publicly accessible information is that each organization "is working hard and dilligently toward seeking the best solution for amateur radio" or words to that effect. Such phrasing is very, very ambiguous with rather obvious self-serving attributions (normally classified as "spin" or "propaganda" but such definitions cannot be used without invoking organization wrath). No specifics were given, only standard boilerplate assurances of honest, dilligence, and hard work.

An honest reply to public queries of organization staffers would have been to mention the specific document and sources of information. I'll give NCI executive director Carl Stevenson credit for being honest about not knowing the exact document title of my query but he did know the approximate date of release. The only other replies did not yield anything of value, only the usual offended psyches' psychological wailing of terrible wounds received in message wars.

Okay, now this member of the public has given other members of the public a rather specific clue on what the Preliminary USA-FCC views are concerning 1.7 et al. That seems to be far more specific than I've seen from any other organization (except NCI) concerning amateur radio. Why does it take an unlicensed-in-amateur-radio person to show where the exact information is located?

>That one was a bit too convoluted for me, Len. Of course ARRL tries to
>present
>its best side to amateur radio and the organizations it deals with. I see it
>up close and personal and I have never seen evidence of fabrication.

The ARRL constantly promotes itself in every media output it controls. It's "news" reports what the ARRL does with considerable selective editing to de-emphasize what other organizations are doing, sometimes in outright omission of such facts. Such selective editing is called "spin" or "propaganda."

Words such as "spin" or "propaganda" are common in definitions in political arenas, accepted as true descriptors by the public. Loyalty to an organization causes organization staffers to exhibit much outrage that spin or propaganda ever happens, followed by a vigorous denial. Denial of existance in light of obvious evidence is ludicrous.

>> The longest-lived one is RCA (the club,
>>not the corporation), founded in 1909, the first ever radio-
>>interest organization in the world and still in existance.
>>Does the ARRL acknowledge it exists today?
>
>Not that I know of. And that is whose fault? There are a number of
>organizations that ARRL has worked with over the time I have been there,
>ranging from the FCC to the Red Cross to the W5YI Group. If you are a member
>of RCA and feel that they should develop a cooperative relationship with
>ARRL, approach them, and suggest their prez' call ARRL's prez' and see what
>common ground can be found.

I am not a member of the Radio Club of America.

I raised that name as an example of "selective editing" and expected
some misdirection. Got it. There is NO issue, no issue raised, just
a mention of the first-ever radio interest club in the world. The RCA
has many radio amateurs as members, was active in early amateur
radio in the USA, and exhibits an interest in the entire field of radio,
not just amateurism.

As part of its own self-promotion, the ARRL selectively omits
mention of other radio organizations. That is a common tool
in spinning.

>I will let your fear of brainwashing speak for itself as to the validity of
>your views, Len. A good place to close...

Misdirection is a common tactic in messaging. I have no "fear of
brainwashing." I know the techniques, can recognize the tactics,
am quite used to spinners and propagandists outrage at being
"outed."

I have presented places to look and names of documents for others
to view. They may look for themselves and judge for themselves,
come to their own decisions, their own opinions. Is that "validation"
enough?

There is NO regulation or reference in Part 97, Title 47 CFR which defines the exact rate in words per minute for on-off keying telegraphy. None.

The ONLY rate reference is an ITU document that specifies the relative time duration for character lengths and spacings. Relative only to themselves. It does not have any rate in words per minute. It never did.

Actually, I think the FCC does "care", to a certain extent. They just don't want to get involved with directing the ARS via license requirements. That way, they bear no responsibility for what happens to the ARS.

For example, if don't use our VHF/UHF bands, or don't use them effectively, the FCC can self-justify reallocating some of them.

The basic point is that it's up to us hams. The FCC cares about the result.

The NTIA routinely monitors spectral occupancy and signal
content in urban areas, recording such for days at a time.
NTIA reports are forwarded to the FCC. Those reports are
publicly available and downloadable from the NTIA website.
Full details of the monitoring equipment and recordings are
included.

From: lenover21@aol.com (Len Over 21)

>One may argue the "summary" and "essence" but that is still a
>subjective viewpoint when there is no confirmation to the exact
>presentation from a third party.

Or one could actually look at the summaries of ARRL Ex Parte presentations and decide whether they are complete. Are you saying that the same FCC that mandates that an Ex Parte summary contain the content of that summary would be in on this collusion you have dreamed up?

>I supplied the exact
>reference and mentioned that the IARU "takes credit" for originating
>the removal of the morse code test as a requirement by
>adminstrations.

I agree; that was an IARU decision.

>An honest reply to public queries of organization staffers would
>have been to mention the specific document and sources of
>information.

Assuming, of course, that you made a public inquiry of a staffer that is involved in the S25 matters and is aware of what is available...

>Why does it take an unlicensed-in-
>amateur-radio person to show where the exact information is
>located?

Because you took the time to go looking for it. It was clearly available to the public, so you are just making a fuss.

>It's "news" reports what the ARRL does with considerable
>selective editing to de-emphasize what other organizations are
>doing, sometimes in outright omission of such facts.

Can you provide some examples of selective editing and outright omission of facts known to ARRL?

> Such selective
>editing is called "spin" or "propaganda."

Assuming it was selective editing in the first place, Len.

>Words such as "spin" or "propaganda" are common in definitions
>in political arenas, accepted as true descriptors by the public.

Some would say that the overuse of the term "spin" is spin in and of itself, too.

>I am not a member of the Radio Club of America. I raised that name as an example of "selective editing" and expected
>some misdirection. Got it

My suggesting that RCA could contact ARRL to work toward seeing if there is some common ground between the two organizations is "misdirection?" Quite a bit of spin there yourself, OM.

>As part of its own self-promotion, the ARRL selectively omits
>mention of other radio organizations.

A bit of Anderson spin not supported by the numerous organizations found in ARRL's publications and web page all the time.

>I have no "fear of
>brainwashing." I know the techniques, can recognize the tactics,
>am quite used to spinners and propagandists outrage at being
>"outed."

If you believe that ARRL can brainwash people by its news and publications, I expect that you do not quite understand the term. Or is the accusation of brainwashing a bit more Anderson spin, too? :-)

>I have presented places to look and names of documents for others
>to view. They may look for themselves and judge for themselves,
>come to their own decisions, their own opinions. Is that "validation"
>enough?

Works for me, Len. Thanks for the information.

I agree with both the above posters, I just recently took the test, and studied the material rather than just learning it, I aced it. At the same time, another person was there the same testing session, he tried to memorize the study tests he took online, and the practice tests in the back of "Now you're talking" and the tests, while the questions and answers were the same, the orders were mixed up i.e. a,b,c,d that he new was reversed or otherwise modified. He failed miserably. You need to know the material. I am currently preparing to take the test for my General, and am using the same technique, learn the material, the theory ect. My biggest problem is the code, I have heard different suggestions on it, and I am making progress, but not as fast as I would like. But then part of that might be due to the partial hearing loss (tone deaf) and the pitch I have problems with is the pitch the code programs send in.

>Full details of the monitoring equipment and recordings are
>included.

The FCC Spectrum Task Force did those surveys in the early 1970s and said reports proved to be totally useless absent content intercepts. Typical problems where electrical noise or intermods showing up as "occupancies", low-power or distant transmitters not triggering the sophisticated receiving equipment, and lots of "empty" air time on emergency channels (fire, rescue, etc) when there were no disasters to handle. In some cases the "regular" field office engineers had to go out to resolve "stuck carriers" which turned out to be electrical noise or overload at the receiving site.

So they conned the NTIA into doing it, eh?

Your taxpayers' dollars at work.....

No, I expect nothing from you. But lets see if your memory gets any better.
Did you go ahead and confirm those out of band contacts? I hope that you at
least printed the exact frequency and not just "6M" so they wouldn't have
the balls to submit them to the ARRL for credit. But hey, for a
greenstamp...

OH2BH "nonsense???" I guess you have no memory after all.

All I was saying was that if one wealthy ham like Marty can get the Axis of Evil/North Koreans to allow amateur radio, what could a group (like the ARRL) do to promote amateur radio there? You're the one who shanghai'd that theme and tried to convince us that the VP of Nokia lived in the low rent district. His income wasn't even the point, but you made it so, because you needed to put me down. Can't have anyone else on here commenting on DX. That's your exclusive domain.

As far as selling QSLs for fun and profit, Steve/KF2TI recently made statement about "charging for a contact." The reason that he made the mistake is because thats pretty much what it is. The brain has to be retrained so that the words that come out are in agreement with Part 97. Not always easy to do when it goes against common practice, and thus it comes out wrong.

Holy Cow! Is your QTH by itself or do you live in a subdivision?

I can't even hear the clear channel stations on AM sometimes because of all the buzzing noise. Besides its a restricted development (which ones aren't???). You need a minimum 5 acres "estate" around here to build a lone house. Anyway, I intend to get up in the attic tomorrow and see what's

there to work with.

Another indication that Dave expects us to seek him out for advice.

Perhaps if Dave were to list the subject matters that he believes himself to be an expert in, or merely very knowledgeable in, we could then direct our queries in his direction.

> sincerity.

WRONG! The public is free to believe whatever the public
wants. Absent any proofs of illegal, unethical or immoral
behavior, MOST people assume sincerity and honesty...there
are, however, and always will be...the black helicopter
element that sees a plot in everything.

> Those who are too personally involved with a group, an issue,

Welcome to the role of marketing ones ideas...nothing
new there.

> The ARRL is very good at this, having had a virtual monopoly
> in the amateur radio field for over a half century.

The ARRL has NO monopoly...your insistent reference
to monopoly misses the mark as to being able to "keep
a monopoloy" status. While ARRL may be one of the
only games in town, the ARRL has never exhibited monopoly
behavior to keep others out.

> They are
> self-sustaining in funding through specialty products sales,

Again, so? More to the point, for lacking the attributes
you claim, NCI seems to have managed quite well working
the "system" exactly as it is supposed to be done.

> >Government vs private organization. Government exists by

BUT lack of believeability doesn't seem to be a problem for the
membership of ARRL or NCI. Beyond their respective memberships,
what difference does it make?

> An organization needs membership backing of some kind
> or it loses credibility and influence power with a federal agency.

We know this Len :-)

>
> Yes, yes, "You have the strength of ten because your heart

> is pure." :-)

Purity of heart isn't needed. Common sense tells me that
any idea almost never will find favor with 100% of members.

> The ARRL was founded in 1914 largely on the efforts of Hiram

I don't see the mainstream being opposed to what ARRL (or NCI)
stands for. A political reality is that people who are content with
what is happening will rarely say anything. Those in opposition,
however, will become to pubic antagonists. Based on that, neither ARRL
nor NCI appear (IMHO) to have a credibility problem with
members, with the public and/or with the FCC.

> Above all you have to refrain from
> signs of knee-jerk responses from personal aggravation or
> holier-than-thou stances.

What holier than thou attitude?

> Adopting a holier-than-thou attitude may feel very good but
> it turns folks away, almost a guarantee to do so. Another
> organization has the lock on holier-than-thou-ness, having
> practiced it for a very long time.

???

> >Sorry, but that IS the only answer you'd get from me.
>
> "Pride goeth before a fall." Not a good answer to either
> skeptics or mainstreamers.

No other answer has been needed. By your own comment
above...this whole dialog has been nothing but a "strawman"
on your part. There appears to be NO issue of credibility
with membership, with the Public or with the FCC on the
part of ARRL or NCI.

> >Perceptions and about a $1 will get you a cup of coffee. If
> >ARRL, NCI and many other organizations had to worry about
> >everyone's "perceptions" we'd never get to focus on our
> >goals.
>
> That begs the question and suspicion about the real goals.
> If "focussing on goals" is so easily disturbed by either
> positive or negative criticsm then are the goals that worthy?
> Or is the goal something else, such as personal for the
> organizers, rather apart from the stated goals?

Let's see...no one in NCI gets paid anything...most people
in ARRL are volunteers with some paid staff. Just WHO
in either organziation might have a personal goal or hidden agenda.

> Lots of skeptical folks are suspicious of the ARRL's goals,

LOTS????

What goals are any of those LOTS suspicios of?

> something evident from in here as well as in other venues.

Not too evident to me...except for a HANDFUL of vocal
people. As I said, those that agree are generally quiet.

> The ARRL of these later years is a combination publishing
> house, goods reseller, and membership organization. There
> is a very blurry distinction between those activities. In most

> a virtual monopoly.

By many comments, ARRL certainly has nothing near even 50%
support of all hams. Is CQ magazine only less than 10%
of whatever you lump into the "ARRL virtual monopoly?"

> >... No monopoly exists, nor has it ever been so.
>
> Denial will not make it what you want.

Claiming it is so without anything of substance
doesn't make it what you want either. The burden of
proof is the role of the accuser.

> >So what? No one is guaranteed any success inife.
> >Have those new organizations been unfairly, illegally
> >or unethically undermined by actions of ARRL.
>
> Was anyone discussing philosophy of "success in life?"
> I don't think so. I made no charges as described in the

But what about that monopoloy you claim?

> <snip>
>
> >I repeat...neither ARRL or NCI owes YOU anything. You are not

> >a member of either organization.
>
> :-) Here we go again... :-)
>
> Ahem, I can't be a voting member of one of them

So what...should ARRL change its membership rules to
accomodate you.

> and the other
> never accepted my repeated applications. :-)

So you stated...and Carl has indicated we have no
idea as to why you encountered a problem.

> Just the same, each organization is engaged in lobbying and
> influence towards the FCC on matters directly affecting entry
> into amateur radio.

Is that illegal, immoral, unethical?

> It is not logical or reasonable to have an
> 88-year old organization of voting members already entered
> controlling, directing, or influencing entry.

PLEASE tell us HOW ARRL is able to hold such influence.
Are you saying ARRL is operating illegally?

> That is de facto
> exclusivity, an extension of the attitude of "we know what is
> best for amateurs."

YOU are free to participate in contrast to ARRL.

> If NCI takes the same position of exclusivity, that will only
> serve to deepen the chasm of differences already established
> between amateurs and the rest of the radio world.

Methinks you see a chasm where none exists.

> The expected knee-jerk response of others, non-thinkers, is the
> phrase "this is amateur radio, only amateur!" They don't realize
> that amateur radio must share EM spectrum and the same
> federal regulation agency with every other radio service.

Some may, most understand otherwise.

> >You don't like our word on it, then don't join.
>
> Taking the ball and going home doesn't end the game and
> disdain isn't a very good answer, is it?

Yet for some, that's the ONLY answer. You don't
like the rules, don't play.

Cheers,,
Bill K2UNK

Most hams have a chuckle at Kim's callsign, and then never give it a second thought. By continuing to show your disapproval, you're giving it more publicity than it would normally get by Kim posting it.

> Which one's, Kim?

Just for a start, because you'd have to read the whole Act to find
everything uncomfortable about it, how about the ability of the government
to now "scan" our discourses on the interent; listen in on phone
conversations; hold people in custody for much longer a period of time than
is even reasonable...

"Read the whole act"...?!? Being informed is a citizens responsibility,
Kim...An obligation, even. How can you ever expect to really participate in our
government if you only want the Reader's Digest version of it?

> Were you unable to vote today?
>
> Did anyone refuse to hire you because of your gender or
predisposition to
> an "alternative" lifestyle?
>

That happens every day to people. Nothing new about that at all.

Yes, it does, but it happens in ever-decreasing rate. We have worked
dilligently to make sure our society encompasses all citizens as equals. But
only in death will we ever be truly equals. The rest is, at best, a balancing
act.

> Did a police officer not inform you of your right to legal
representation
> after he (since we no longer allow women officers) arresetd you?

Women officers? They're all over Dallas. And, Miranda was suspended before
the WTC, so I don't think that could be included as a result of the

disaster.

"Miranda was suspended"...??? When? And the reference to "no women" was
a suggestion that your suggestions about artificial restrictions are
implausible.

> >- patriotism has become the new measure by which we accept each other

I *do* mean that. It's almost like if one does not have flag glued to their
vehicle in some manner, or hanging from their home, their patriotism comes
into question. That is beginning to die down a little here.

moment
> and are subject to change by vote or convention.
>

Well, I consider them freedoms. Your mileage may vary.

True "freedom" is anarchy. We will never, except in death, have true
"freedom". No society that has ever flourished on Earth has ever been a truly
"free" society. I am willing to wager there never will be. Even if we lived
our lives by "just" the Ten Commandments, someone would still whine about how
thier "freedoms" are being bound.

> Even more unfortunate is that had we been "riding herd" on some of

Hmmmm, we always seem to feel so safe and warm. For how long has the "Made in China" tag been around; Japan; etc. In my opinion, we've been "asleep at the wheel" while America's been taken over silently. Never a shot fired...

Yep. I agree. However it's not germane to the conversation. How do you equate commercial trade with terrorsim?

> You are right, Kim. The dust hasn't settled yet. The financial fallout
> will be years in settling. Families have been torn apart and billions of
> dollars wasted that could have been invested in our future and wellbeing.

Yeah, I love these companies who are suddenly doing so awful. There's those that are legitimate. There's also those that are playing this to the hilt and taking every opportunity they will.

I have no doubt of the abuses and "excuse" of 9/11 being the cause for financial failure of some companies. There will always be charlatans. Still not germane.

> Can you honestly say that all that was lost is worth it since, along the
> way, someone didn't get hassled by a federal investigator trying to make sure
> this could never happen?
>

I can't quite get that question, Steve...maybe I need a shot ;)

Do we allow more 9/11's to occur because we hamstring our intelligence services because they MIGHT infringe on someone's civil rights?

IF the civil rights of one...even 100 people had been intruded upon by various investigators over the years, would that have not been worth the lives of thousands of people? And even THOSE people would still be alive.

> Our "security" and our "rights" are fluid concepts. Only the Bible has
> rules in it that are supposedly unvioable, and those are the one's we seem to
> break most often. What makes anyone think anything written by the hand of man
> is so sacrosanct?

When there's a entity in power out there that begins making decisions on what I say--whether intended as a joke or perfectly serious--and is given leeway to begin scanning what I say, I get real nervous. I don't think any entity in power should have that latitude. Maybe if I'd always grown up and lived under dictatorial type governments the concept wouldn't bother me so much.

Then at what point do we allow surveillence? How? When? According to all media sources, the hijackers used regular Internet, just as we are, to coordinate thier activities. What if we had allowed the FBI to surveil these resources more finitely?

Your words and actions have been "scanned" all your life, Kim. First by your parents, then by educators. They actually have the least amount of "rules" on what they can or cannot do in regards to monitoring your comings and goings.

At least we DO have civil oversight over these organizations.

88

>> mention the vast difference in privileges granted.
>
>The point that I was trying to make is "times change" and that
>the mentality of the past is no longer suited to today's world
>in terms of promoting a healthy future for the ARS.

Which "mentality of the past"? The mentality that ham radio is G-rated
and suitable for every member of the family? The mentality that hams
are more than users of manufactured gear? The mentality of making
getting started easy, but reserving full privileges for those who have
gained some knowledge and proficiency?

See what I mean?
>
>"Complaining" about liberalizations in outdated technical
>restrictions vs. tests is not the answer.

I agree! I wasn't complaining - I was comparing.
>
>Recognizing that the ARS needs to modernize constantly
>to remain interesting to potential newcomers and to remain
>competitive technologically with other alternatives that
>compete for people's interest and discretionary time is

>that our numbers would likely have plummeted SERIOUSLY
>over the past 10 years.

That's only speculation. There are entire NGs devoted to alternative historic timelines, like "what if Hitler had focused on giving Doenitz all the U-boats he needed instead of wasting resources on debacles like the Bismarck and Turpitz?" Interesting but unprovable and a moot point.

Fact is, the FCC DID drop the code test from the Tech in 1991. They'd been pushing for a nocodetest license since 1975.
>
>* I have elaborated on my concerns with the power levels
>vs. demonstrated level of technical competence for the
>NCT license.

FCC doesn't see that as a problem. Have there been ANY cases of problems related to high power connected to lack of testing?
>
>* The main problem in terms of "an effective entry-level
>license" IMHO is that we are still stuck, for the relatively
>short-term, at least, with most of the newcomers being
>relegated to VHF/UHF because of the Morse test
>requirement for HF access.

You miss some important points:

- Passing the 5 wpm code test gets a Tech minimal HF privs. It takes 5 wpm and another written test to get more than a bit of 10 and tiny slices of 3 other bands.
- The 5 wpm CSCE is only good for a year.

Both these can be fixed. See below.
>
>* Once the Morse test is eliminated, it would seem to
>make sense to adjust the Tech test to cover HF principles
>and grant newcomers much broader HF privs ...

Why not do it now? The current license structure is a patched-up version of what was started in 1951 and last seriously revised on 1968. Talk about needing modernization!

> or maybe
>it would make sense to "merge" the tech and general
>classes ...

Without further testing?

> the only problem with such a merger would be
>that it might make the step from "unlicensed" to "licensed"

>unnecessarily large ...

The step is already too big. That's one of the problems, irrespective
of code testing.

>I'm certainly open to ideas on how

He was a guy who saw what he'd worked hard for being given away for
much less - and with NO reason being given.

Of course the way he did it was very counterproductive.
>
>That's why I mentioned him ... because I perceived him as
>a good example of EXACTLY THE WORST attitude that

>hams should show to newcomers.

How about the attitude that calls other hams names like "cranky old
fart" because of a disagreement? Is that what we want newcomers to see?

I was a newcomer in 1967, when "incentive licensing" was getting started. I
recall lots of hams being mad about losing "their" privileges. Most of them
thought that Generals had always had all amateur privs in the USA. Their
attitude was much like ol' Mike's.

>> But not with using the written tests to do the same thing. One

>
>I'm sure that there will be more discussion in that direction
>in the future, but right now, the focus of my limited time is
>on the elimination of the Morse test.

What remains to be done in the USA? Is it not perfectly clear
what the FCC wants to do?

Do you really think that S25.5 has any chance of lasting past WRC 2003,
or that there will be any code testing left soon after that? Many countries are
already moving to 5 wpm only - if they haven't already.

>Once that is accomplished,
>I will have more time to focus on how other aspects of licensing
>and testing can be improved ...

The time to consider a new license structure is now, so that a
consensus can be built. FCC will not want to do it piecemeal. If we wait,
they will table the whole mess for several years.

Doesn't it make sense to develop a plan for post-S25.5 licensing now, instead
of leaving it to the future and more patchwork?
>

>in the difficulty of the test(s) ... as Ed has pointed out, there's a
>hell of a difference between the 4 page study guide he used and
>the current one, which if I recall correctly runs about 250 pages!

200 - but that includes the entire Q&A pool, and detailed explanations of the theory behind them.

I can easily write 5-10 pages on Ohm's Law for DC circuits. The old LM devotes perhaps one small question to it. Yet Novices were expected to know it and how to use it.

>(Then another one of ?how_how_many_pages? to make the
>move from Tech to General???)

At least another 100.

>I simply can't understand, given the MUCH larger amount of
>material one has to cover, how anyone can claim that the
>tests are "easier" or have been "dumbed down."
>(Not saying that you are saying that ... but rather that quite
>a few make that complaint.)

It's the METHOD.

--

Here's a summary of the ideas Rich Plourde and I worked up.

Underlying concepts:

First, nobody should lose existing privileges
Second, FCC isn't going to accept lots of license classes, so we stick with 3 classes
Third, the privileges should match the tests taken.

For clarity, let's call the new classes First, Second and Third to avoid confusion with the existing 51-year-old names. (The names aren't critical).

Third Class is entry level. Easy to get - a Novice for the 21st century. Simplified written test, focusing on the basics, mostly rules, operating procedures and safety. Allowed power levels kept low to avoid needing lots of questions on RF exposure - say, 100-150 W on HF/MF and 25-50 W on VHF/UHF. Wide selections and modes and access to parts of all HF/MF bands - probably all of 160 and the WARC bands. Third Classers can't be VEs, club trustees, repeater control ops, etc - all to simplify the written. Callsigns are all six character (like
WA3IYC)

Second Class adds more power (400 W or so) and more subbands. Written test is more comprehensive - about half and half rules and theory. Also allowed to be VEs, trustees, etc. Callsigns are five or six characters (W6BXC, WA3IYC) One

years as Third Class required experience

First Class is full privileges. Test is mostly theory, with rules to match full privs.
Calls signs are four, five or six characters. One year as Second Class required experience.

Bands are divided into subbands by mode type - CW, digital, analog phone/image. Typical division 35/15/50% of a band

Existing Novices and Techs get Third Class, existing Generals and Advanceds get Second Class, and existing Extras get First. Existing hams do not lose high power privs as long as they retain old license documents.

This structure could be implemented now, even with the code test still in place.
Those who have passed the code test get HF, those who haven't get VHF/UHF.
If/when S25.5 goes away, those who haven't passed code test get HF/MF.

End result is a simplified system where the privs granted match the tests passed,
plus incentives to upgrade without the entry level being too limited to be attractive.

Sure, there are parts you don't like. There are parts I don't like, either. But

doesn't it make more sense than what we have now, or what we'll have if all that happens is dropping the code test?

Quite frankly? I don't think there's really any way to avoid things such as terrorist attacks. I really don't. I also don't think you'll find many of the proportion of the WTC. I truly, truly don't want to sound flippant here but, for the sake of debate, didn't Osama bin Laden himself say that the magnitude of destruction was more than they had realized would happen?

Terrorism is a way of life...like life in the big city. All we end up doing by striking out to erradicate it, is probably putting ourselves into more of a box. I don't particularly care to give in like that.

>Quite frankly? I don't think there's really any way to avoid things such as
>terrorist attacks. I really don't. I also don't think you'll find many of
>the proportion of the WTC.

Now THIS scares me...it's defeatism.

And you know where you don't find one's of the proportion of WTC..?!?!
Well, how about Isreal, for one. Although they still ahve to deal with bus bombers and other suicide idiots, I don't think we'll ever see airliners flying into buildings there.

Perhaps because the Moussad doesn't take no for an answer...And I don't think too many Isreali's are as concerned about their intelligence agencies limiting thier freedoms.

>I truly, truly don't want to sound flippant here
>but, for the sake of debate, didn't Osama bin Laden himself say that the
>magnitude of destruction was more than they had realized would happen?

And just because he didn't expect it to be that big means it's OK?

>Terrorism is a way of life...like life in the big city.

Then it's OK, huh?

Got a 13 year old daughter I can molest? Isn't molestation a way of life for some? Must be, if we accept your logic. Drugs...Let's pass 'em out at the lunch counter at school with hotdogs and cokes (ooops! Freudian slip!)

No...terrorism is NOT a way of life. It's an interruption of life.

>All we end up doing
>by striking out to erradicate it, is probably putting ourselves into more of
>a box. I don't particularly care to give in like that.

The Jews tried that...it was called apeasement. It didn't work for them, either.

>Truly? I'd rather ask those thousands of people. Myself? I'd be willing
>to put my life on the line to allow more liberty, freedom, whatever we want
>to call it. To do otherwise, in my opinion, is to let "them" win.

Then you can't have it both ways. We either decide that our way of life is righteous and worthy of defense, or we surrender. It's that simple.

>What if you and I "joke around" about something that raises suspicion? Next
>thing you know, we're arrested, or at least detained, for questioning.

I don't say "bomb" on an airliner and I don't stick my finger in my pocket
at the 7-11 and say "give me the money. Ergo I have nothing to fear of the
feds.

>Next
>thing you know, it's you and I that have to spend the bucks on attorneys to
>get us out of perfectly innocent talk, letter writing, phone conversation,
>emailing, chat room, take-your-pick.

It's ben going on since J.Edgar's day. Other than the technology being
different, what do you think is diffrent now?

>I don't think we have enough oversight any more. And, I think we'll have
>less and less as time goes on. I may be wrong. I hope I am.

Oversight is fine. But not when it lays our intelligence agencies and
Armed Forces open to such public scrutiny that they can't function.

Our "opponents" and even some of our Allies think it's really funny that we
actually make a big deal about security, then lay that information out for all
to see as if "the bad guys" are going to respect our privacy and not peek.

Time to take off the gloves. I am sorry that some innocent people may
come out of this with a bloody nose, but they will be able to bitch about it.

>Much of it already is gone, the rest is going fast.
>
> Again; Alas, poor Ham Radio, RIP. We hardly knew ye.

Dick:

I must agree. Ham radio seems to be fairly stable at the moment,
from a standpoint of numbers of licensees. However, after the
final chapter of dumbing-down is written, and the 5 WPM code test
goes away, the chaos on the HF phone bands will be so bad that
it won't be resolved by any amount of "refarming" of spectrum. At
that point, any remaining "old timers" will give up in disgust, and
the CW/Digital sub-bands will be given over to phone band
expansion out of sheer demand -- or rather outcry from the whiners
who can't get a word in edgewise on HF and want the ARRL/FCC
to do something about it. Ultimately, the FCC will tire of managing
this mess, and either totally deregulate the amateur HF allocations,
or merely pull the rug out from under our feet, sell everything above
500 MHz to the highest bidder, and leave us with deregulated, CB-like
chaos on HF and fill-in-the-application-blank licensed repeater
monkeys. OH, right -- there will be all those eager new CW users
who were "sold" on the value of that mode. Right.

>IS THE antidote to dumbing down (and Morse proficency or lack thereof
>has nothing to with "being dumbed down.")
>
>Carl - wa6vse

Carl:

The way I see it, there are two parts to being a ham. One is basic,
useful operating skill, and the other is the technical knowledge that
permits one to "operate" in the first place. I don't separate one from
the other, therefore a lack of knowledge of one of our simplest,
most durable, and most effective operating modes does, indeed,
cause a general "dumbing down" of radio amateurs.

You are absolutely correct that technical knowledge does not depend
on Morse code skill -- but being a completely capable amateur
communicator does. The plain truth is that those who haven't been
bothered to gain useful Morse proficiency simply don't understand
where the PCTA is coming from. Therefore, IMHO, they are not
qualified to judge the value of code testing as a licensing requirement.
Those code-proficient hams who also possess high technical skill
yet claim that code testing isn't necessary to keep the mode alive
are merely electing to stay out of a political shooting match.

>Kind of like you do with CW.
>
>Kim W5TIT

Kim:

How, pray tell, do you think I *should* judge non-patriotic Americans?
This is one of the few countries in the world where freedom, liberty,
and equality of opportunity are guaranteed to each and every citizen.
It is one of a very small handful where true ethnic and cultural diversity
are the norm -- not the exception. It is the only country with the generosity
of spirit to export our concepts of freedom and liberty to other nations
who suffer under the oppressive rule of tyrannical dictators. We sacrifice
the lives of our soldiers, sailors, airmen, and Marines to give others a
chance to live as we do, and get little thanks and hardly no appreciation
for our trouble. Other nations would rather foment hatred of us for our
wealth and lifestyle, rather than foster the freedom which could bring it into
their own lives. Yes, Kim -- I DO use patriotism as a yardstick to
"judge" other people. If you're an American, and enjoy the way of life
that being an American brings to you -- then you'd damn well better
be patriotic as all heck -- or you will have a problem with me!

Military veterans like myself have sacrificed the best and most
productive part of our lives to ensure that the rest of our countrymen
can continue to enjoy the benefits of life as Americans. Hundreds
of thousands of U.S. veterans have given their very lives to this
cause. I appreciate this sacrifice, I honor those who made it, and I
value the patriotic fervor that inspired it. There is a perfection of
liberty enjoyed by Americans that exists in few other places on the
face of this planet -- made possible by patriotic American military
personnel and all of the hard-working, courageous, self-sacrificing
citizens who have supported them through the years. We have
defeated the oppression of Nazism, Fascism, and Communism
in Europe and Japan, and will defeat the threat of terrorism anywhere

it is found -- but only if all Americans stand together and freely express their patriotic fervor without fear, compromise, or apology.

I have no doubt that if our country were attacked again in a manner which put us back in a global war, you would gladly go to a wartime defense factory, pick up your rivet gun, and work just as hard to help defeat our potential oppressors as Rosie the Riveter did during WWII. So please think twice before you criticize people who "judge" others on the basis of patriotism. Here in the USA, that's the best yardstick to use!

Well, Google can't find any message posted by an author called "Radio
Ham" before 1998.

I suggest you're not being entirely truthful.

Usenet allows one to maintain a certain amount of anonymity. It's quite
possible that he has been posting since 1994, but not necessarliy under the
pseudonym of "Radio Ham" all that time.

True. However, it still somewhat invalidates his claim that "merely
looking at my postings will satisfy your meaningless challenge" when
he doesn't tell you who he *was*, doesn't it?

(I'll drop this now, what with me being a brain-dead CB'er and all.)

Drop a line to WA8JOC and make inquiry. I did not make out QSLs for
QSOs. My cards may have indicated an actual frequency since QSL labels
were printed from my logs. The implication from your "greenstamp"
comment is that we were somehow raking in the dough on QSLing. I went
out of pocket some $1000 on QSLing.

So, to be sure that I understand you, the fact that I got on the air
made me guilty of luring folks outside their band segments? Wowser,
that is some power I have.

> Holy Cow! Is your QTH by itself or do you live in a subdivision?

Subdivision? The nearest would be about 25 miles away. We have a plot
of land up on a ridge. I have a couple of neighbors, one at the foot of
my drive and one across the road. They're each about a hundred yards
away. The rest of the area is woods and pasture land.

> I can't even hear the clear channel stations on AM sometimes because of all
> the buzzing noise.

I did find some noise interfering with reception on MW and on 80m. It
turned out to be fluorescent lighting in my barn. Bypass caps and a
brute force line filter fixed that. I also found that a smaller, indoor
loop didn't work well since it largely heard the noise from my
computers.

> Besides its a restricted development (which ones

That is one of the sad things about modern life. You are prevented from
doing things you'd like because of the lack of alternatives to the CC&R
nonsense which swept the nation.

Yup, it is another "she made me beat her" sort of thing.

In your holy crusade to protect everyone's morals, Larry, you are doing some
pretty unholy things.

>Dick and I aren't going to show
>tacit approval of her deliberate attempt to undermine the good opinion
>the public has of the ARS through her ill-conceived call sign.

By calling more of the public's attention to it. That is a pretty illogical
approach to take, Larry.

>My only question is -- why do YOU?

I have not approved or disapproved of her callsign, Larry. I do not feel that I
should be given the power to enforce unwritten laws by bullying other people
into either changing what they are doing or going away.

I don't have time for that, Brian. If you're really on a quest for
knowledge, perhaps I can suggest some good books or steer you to someone
with the knowledge and the inclination of devote large hunks of his time
to your quest.

No, I cede the point that if one does a Google search, one can find a post in
which you do not refer to Kim's callsign.

Of course, most people use Google to find something that WAS said, not an
example of what was not said.

Granted, Len that you can't be a voting member of ARRL because
you're not a licensed ham (unless they've changed that rule, which
I doubt) ... if you have a beef with that, take it to the ARRL, 'cause
those are THEIR rules.

As far as NCI goes, I can't fathom why you would have had a
problem in joining if you've really tried to do so ... the process
is simply a matter of filling in the necessary information in an
HTML form on the NCI website and clicking a button ...
thousands of people have done it without problems, so I don't
understand why you and you alone haven't been successful.

The data from the HTML form is processed by a database
front-end script and goes DIRECTLY into the membership
database. I get an automated e-mail for each and every new
member signup ... I don't recall every getting such an e-mail
regarding your completion of the form (and I'd recognize your
name ...) and there is NO entry in the database for you.

Again, literally thousands of people have succesfully
completed this process with no apparent difficulty and new
members continue to sign up at what I would characterize as
a brisk pace for an organization of our size.

While I'm not questioning your veracity, I frankly and honestly
don't recall any of your previously referenced communications
with me regarding your inability to join (which you've somehow
twisted into "rejection.") I have assured you that you were
NEVER deliberately, consciously "rejected" as a member
of NCI.

If you wish to become a member of NCI, I would state without
reservation that I can think of no reason that you should not
be able to do so ... there is no "conspiracy" to "keep Len out
of NCI."

Simply fill in the form (completely, and please use proper
capitalization) and click the correct button at the bottom.
Just to see if there IS some strange, unknown software
issue, send me an e-mail at my main e-mail address
wa6vse@fast.net letting me know when you've sucessfully
completed and submitted the form and I'll both watch for the
automated notification e-mail that I should receive and also
check the database for a new entry. You should also receive
an automated e-mail acknowledging receipt of your information
and stating that you will be contacted with further information
shortly. (If any or all of these things don't happen, there must
be a VERY obscure bug in one of the database scripts and
I'll certainly look into it. Any feedback you send me, such as
copies of any error messages you receive, would be appreciated
and will help me to resolve the problem if one exists.)

Steve,

Unnecessary cheap shot ... and inappropriate considering that
there *could* be kids reading this stuff.

(You know what they cay "converts are the most zealous") ... since
Ed and a few others gave me the good advice to "tone it down,"
I'm a convert ... it's not my business if you like Len or not, but let's
at least keep the vendetta free of sexual inuendo and insults, OK?

Thanks for listening and 73,
Carl - wa6vse

Larry,

Three cheers...I agree with EVERY word you have said in
the post above. I will only add the following...

In addition to Larry's comment, where else are those that
oppose American ideals and principles allowed a totally
open forum to express their anti-American hatrid. Indeed,
the same dedicated American military have defended the right
of the naysayers to express their opposing comments and/or
their anti-American tripe.

Cheers,
Bill K2UNK

Ask Radio Ham what name he used to post under in the time frame he
mentioned. I bet you won't get an answer.

In the small number of his messages posted in 1995, all replies to
other postings were either bottom-posted or had his answers
interleaved with the remarks he was addressing. Interesting, what?

WHO has the "ownership" of making sure notes are published? That woiuld
seem to be the FCC. If YOU have a complaint as to timliness of
meeting minutes, perhaps you need to direct that complaint to the proper
entity responsible.

> The first indication of the USA FCC preliminary position on Agenda

Those are the current buzzwords used whenever someone disagrees
with the position taken. On Madison Avenue its called marketing.
Should Ford offer its competitors equivalent "reporting" when
Ford advertises what it is doing in development?

> Words such as "spin" or "propaganda" are common in definitions
> in political arenas, accepted as true descriptors by the public.

The opposing side always plays the "spin" or "propaganda"
card in reaction to what it doesn't like to hear. Playing those cards
is "spin" itself.

> Loyalty to an organization causes organization staffers to exhibit
> much outrage that spin or propaganda ever happens, followed by
> a vigorous denial. Denial of existance in light of obvious evidence
> is ludicrous.

I won't denie "spin" at all. More that it is the organization's
right to report things as it sees fit to best foster the position
of the organization.

> >> The longest-lived one is RCA (the club,

> a mention of the first-ever radio interest club in the world. The RCA
> has many radio amateurs as members, was active in early amateur
> radio in the USA, and exhibits an interest in the entire field of radio,
> not just amateurism.

Who cares, so what. It isn't the role or responsibility of ARRL
to promote or report on the history of every club that exists
or existed.

> As part of its own self-promotion, the ARRL selectively omits
> mention of other radio organizations. That is a common tool
> in spinning.

As part of the car club I belong to, we do NOT mention other
clubs that might compete for our members. WHY should we?

> >I will let your fear of brainwashing speak for itself as to the validity
of

No outrage at all. Indeed, for you to EXPECT every public
report by any organization to not be positioned in the best light
for that organization is pretty simplistic.

> I have presented places to look and names of documents for others
> to view. They may look for themselves and judge for themselves,

I await the responses.

Cheers,
Bill K2UNK

283. Compenstaion for amatuer radio operators

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-03 14:57:12 UTC
From: Steve Adell - KF2TI <kf2ti@arrl.net>
Message-ID: <a5tdl1$m3a$1@nntp9.atl.mindspring.net>
Source record: 36276

Per Riley Hollingsworth,

If I were a volunteer during an emergency/disaster (flood, hurricane, snow, etc) and I was given food and shelter during the event..THAT IS PERFECTLY ACCEPTABLE and does not violate Part 97.113 (b)

If I am providing communications for the NYC Marathon and I am given a shirt/jacket/hat, etc. used to identify me as part of the staff or for public identification purposes and if I am provided with food during the duties of providing communications...THAT IS PERFECTLY ACCEPTABLE and does not violate Part 97.113 (b)

If I am allowed reimbursement of direct expenses during the course of providing communications for such activities, provided it is not above or beyond the actual expenditures, including mileage for charitable work, in accordance with IRS regulations, ...THAT IS PERFECTLY ACCEPTABLE and does not violate Part 97.113 (b)

If I run a repeater and solicit donations from users to help maintain said equipment...THAT IS PERFECTLY ACCEPTABLE and does not violate Part 97.113 (b)

If it is a club repeater, requiring the paying of dues, in part to maintain the repeater but also to run the organization sponsoring the repeater...THAT IS PERFECTLY ACCEPTABLE and does not violate Part 97.113 (b)

If I voluntarily include additional funds when sending a QSL card to another party...THAT IS PERFECTLY ACCEPTABLE and does not violate Part 97.113 (b)

HOWEVER....

If I were a volunteer during an emergency/disaster and charged a daily fee for providing communications service...THAT IS IN DIRECT VIOLATION OF Part 97.113(b)and is subject to loss of license and /or criminal proceedings.

If I am providing communications at the NYC Marathon and require a monetary fee for every piece of traffic I handle...THAT IS IN DIRECT VIOLATION OF Part 97.113(b)and is subject to loss of license and /or criminal proceedings.

If I insist that in order to provide communications for such events, I insist on a per diem...THAT IS IN DIRECT VIOLATION OF Part 97.113(b)and is subject to loss of license and /or criminal proceedings.

If, in order to make the DX contact, I insist on a monetary exchange before hand...THAT IS IN DIRECT VIOLATION OF Part 97.113(b)and is subject to loss of license and /or criminal proceedings.

If, after the contact, in order to receive a QSL card, I insist that a monetary exchange be done or the card won't be sent..THAT IS IN DIRECT VIOLATION OF Part 97.113(b)and is subject to loss of license and /or criminal proceedings, as long as it involves US amateur only making the demands.

If I run a repeater and insist that a monetary exchange be done before access is allowed...THAT IS IN DIRECT VIOLATION OF Part 97.113(b)and is subject to loss of license and /or criminal proceedings.

If I run a special event station sending NTS messages and require a fee to do so...THAT IS IN DIRECT VIOLATION OF Part 97.113(b)and is subject to loss of license and /or criminal proceedings.

Note that sending a couple of $$$ or IRC's with a qsl card (voluntarily) is perfectly legal under the rules.

If doubts or questions still remain, it is suggested that the person(s) involve contact Riley Hollingsworth himself

In the part 5 years, the FCC has prosecuted 2 people for direct violations of this rule. None had anything to do with DX, QSL cards, Emergency communications or repeater operations. In both instances, it was people charging for sending NTS messages.

Just an FYI

That depends on the person. For many people, it's easier to learn the concepts, but for others it's easier to simply memorize enough of the Q-A pair to recognize the right answer without really understanding it.

Fun facts: The pre-restructuring Tech has been passed by at least one preschooler. The pre-restructuring Extra has been passed by some preteens - one as young as 8. In most cases they passed on the first try - code and theory!

Hurricane Floyd, 1999.

Go to google, look up the first post in the thread "Hurricanes and Emergencies"
posted on 10/10/99 by KT4ST. His county was evacuated in that storm. He was
there, see what he wrote.

If you are really interested and not just blowing smoke, that is.

>I'll even make
>it easy for you, does the Hurricane Net use CW communication for
>anything--other than H&W?

Why doesn't H&W count?

>I have always heard of CW being this great tool

Look up the post, above.

>I *know* that
>there is a CW traffic net; but most traffic these days is contrived for the
>benefit of having a net (net messages back and forth, etc.).

There is a whole network of NTS CW traffic nets, from section to region to
area.
A reasonable person would not say that most of that traffic is "contrived"
unless
they had actually monitored the various nets and messages passed.

NTS nets are all over 80 CW in the evenings.

True - because the potential danger to others from walkers and cyclists
is pretty low. Sidewalks are provided for walkers, too.

>This just shows were some hams
>are technologically, and where they're likely to stay.

What's wrong with walking and bike riding? They conserve natural
resources, reduce pollution, and are healthy exercise. If there's
anything wrong with those modes of transportation, it's that too
few Americans use them. Lack of exercise is directly linked to
many of the top causes of death in the USA.

Carl, considering the way you've described Morse/CW on this NG
and elsewhere, I doubt very much that anyone asking about the
mode would get an objective presentation.

For a description of the use of Morse in a recent emergency situation,
go to google and dig up the first post in the thread "Hurricanes and
Emergencies". Posted 10/10/99 by KT4ST.
>
>The entire argument that "Morse is essential to emergency
>communications" is SO bogus that it's ridiculous, thus it

>doesn't hold water as "justification" for continued Morse testing.

I would describe it this way:

"What is the probability that a ham will be in an emergency situation where Morse/CW is the ONLY available mode that will work? Is that probability high enough to justify mandatory testing of ALL hams as a precondition for a license?"

Those are the pertinent questions.

A guy was stopped for not signaling a lane change. He was on his way to
pay $5000 cash for a motorcycle. The cops took his $5000 and wouldn't
give it back. We all have something to fear from the RICO laws.

What could be the issue? If your club has
a web site that anyone can access, then publishing
(i.e. telling others about it) is neither illegal nor
unethical? If anyone thinks otherwise, I'm
open to listen.

Ryan, I'd rather not see the name "ARRL" on any newsgroup not initiated and moderated by the ARRL. There's already enough ARRL bashing out there. And I believe that there are some SIG reflectors on the members only side of the ARRL.org site. The ARRL also has a number of weekly reports and newsletters that are available via e-mail.

As far as 6M goes, there are already 6M reflectors out there. I subscribe to a daily summary for one of them. If you search AC6V.com for reflectors you'll find them.

Larry, attention.

This is obviously a troll, saying exactly the right things to get you going.
How gullible you are.

As I said before the rule making, "What I fear most about restructuring is a
lack of enforcement, and what I fear most about maintaining the status quo
is a lack of enforcement." Code never has been a barrier to poor ham
behavior, at least it hasn't worked in your case.

Meanwhile, we are supposed to have enforcement once again in the name of Riley Hollingsworth.

As you were.

Brian

> Which "mentality of the past"?

I'll take them one at a time, then add one or two of
my own ...

>The mentality that ham radio is G-rated
> and suitable for every member of the family?

No issue here ... I agree completely.

>The mentality that hams
> are more than users of manufactured gear?

No issue here ... I agree completely.

> The mentality of making getting started easy, but
> reserving full privileges for those who have
> gained some knowledge and proficiency?

Here I have some issues ...

I don't think that the mentality of many, many OTs
is one of "making getting started easy" ... my experience
in discussing the issue, reports/complaints from newcomers,
etc. is that many, many OTs ("long time hams") actually
```

want to make it hard(er) for newcomers. It's as Ed and
others have observed ... they seem to remember the "tests
that they took" as being much more rigorous than they
actually were, view any changes as "dumbing down," and
resent that newcomers are not subject to the same set of
limitations and restrictions that they faced as newcomers.
(In short, they can't/won't accept that times change and ham
radio needs to change with it in order to remain attractive
in the face of all of the other things competing for people's
interest and discretionary time.)

I'm NOT saying that rank beginners should have FULL
privileges ... just that they should have enough, with
sensible, justifiable limits based on their demonstrated
level of technical knowledge, that the ARS is, in fact,
interesting and they don't feel like they are being treated
as 2nd class citizens who are reviled and looked down on
by "their superiors." You claim not to have seen much of
the latter, but I have seen it personally (even experienced
it from folks like Dick and Larry, but I'm thick-skinned and
I don't pay attention to their insults) ... I'm much more concerned
about the degree to which this happens to others as they
enter our ranks as newbies ...

> See what I mean?
> >
> >"Complaining" about liberalizations in outdated technical
> >restrictions vs. tests is not the answer.
>
> I agree! I wasn't complaining - I was comparing.

OK ... if I was overly sensitive, I'm sorry ... but at first
read it certainly appeared that you were bemoaning
the fact that newcomers today get more liberal privs
than "back in the good old days when the Novice was
75W input, rock-bound, 1 year to upgrade or you're out.

(Remember, I missed a LOT of your discussion with
Richard P. where you indicate you spent a lot of time
discussing what would constitute an attractive set of
requirements and privs for a more "meaningful" entry
level license ....)

> >Recognizing that the ARS needs to modernize constantly

>
> That all depends on what you mean by "modernize". Is
> there no room for both the old and the new?

Nobody is trying to "ban Morse useage" ... I think you know
that.

There is "room for the old" in terms of what people
choose to use ...

There is NOT room for the old in terms of: "It's always been
this way, we've always used ____ and we don't want no
stinking ____ taking up space in the bands;"
"We have to make it really hard to get a license so that people
'prove their dedication and worth' and to make sure that we
are not 'over-run by the dreaded CBers';"
etc.

I think if one looks at where the growth in licensees came from
and the huge sucess of the NCT, it's a very plausible supposition.
Yes, one could argue "what if" 'till the cows come home, but I
believe that my scenario is the most likely outcome, had the FCC
not instituted the NCT when they did ...

> >* The main problem in terms of "an effective entry-level

IMHO, the 5 wpm code test is a bigger barrier than the
additional written elements to get to General (at least
more distasteful to many, and doing something you don't
find interesting, don't like, and don't really want to do is
almost always more diffficult that doing something that you
find interesting and you want to do ...)

> Both these can be fixed. See below.
> >
> >* Once the Morse test is eliminated, it would seem to

1968.
> Talk about needing modernization!

Without the 5 wpm code, Techs can't operate below 30 MHz
without putting the US in violation of the ITU Radio Regs ... the
FCC won't do that ... also, since it was structured as a VHF/UHF
only license class, the tech written doesn't cover HF principles
adequately, if at all.

> > or maybe
> >it would make sense to "merge" the tech and general
> >classes ...
>
> Without further testing?

NO ... NCI and the NCVECs both agreed that there should
be no "freebie" upgrades where required test elements were
waived. I still feel the same way ...

However, the tech test (sans code) could be "fixed" to
cover the basics of HF and in a post-WRC regulatory
environment techs could be given much more meaningful
HF privs to make it more attractive, get them "socialized"
on the air with some interaction with more experienced
HF hams, and not make them feel like they are 2nd class
citizens, relegated to "the ghetto" ... of course we'll have
to incorporate a "How to ignore the jerks who will tell you
you're not a 'real ham'." section in the study guide :-(

> > the only problem with such a merger would be
> >that it might make the step from "unlicensed" to "licensed"
> >unnecessarily large ...
>
> The step is already too big. That's one of the problems,

irrespective
> of code testing.

Wow ... I hope you have your asbestos suit handy ... I'm
sure that the idea of making it easier for anyone to get
a ham license with HF privs will result in a lot of railing
about how YOU want to "dumb down ham radio and
turn it into CB."

So, he was a guy with a "dog in the manger" chip on his
shoulder (as I suspected).

Do you REALLY believe that ANY reason would have
satisfied him and made him behave more civily to
newbies? (I doubt it ... I just think he didn't WANT any
newbies coming in to "clutter up 'his' bands.") There's
still a lot of that today, despite your assertion that YOU
don't see much of it ...

> Of course the way he did it was very counterproductive.

see?

Sorry ... I can't think of a more adequately, accurately descriptive
term for folks with the sort of anti-newbie attitudes that that guy
(and quite a few here) and others I've seen/heard in action over
the years exude ... if you can suggest alternative terminology that
is adequately, accurately descriptive, I'll consider adopting it ...
:-)

Besides, the newcomers RAPIDLY recognize the cranky olde fartz
and view them as same ... without any need for "coaching" from me
or other long-time hams who are willing to accept them into the fold.

> I was a newcomer in 1967, when "incentive licensing" was getting
started. I

Yes, the FCC got a couple of petitions last year, asking that
old "Class A" and Generals be "restored their God-given rights"
by getting a freebie Extra ... both were denied as "old news".

> >higher frequencies ...

>
> But the FCC disagrees, and has disagreed for decades. Odd, isn't it?

The Tech test used to be (and was when I took it) the SAME written
test as General (I'm sure you know this). When they changed things
to where the Tech was a lesser written test, they should have changed
power limits, IMHO ... however, there is a question of "How do you
enforce that?" My answer would be that posession of a rig or amp
capable of producing more than the legal output for the
class/frequency
would be prima facia evidence of a violation. The power limit should
be high enough to cover most common "barefoot" rigs, but well below
1500W ...

>
> Sure - but that does not mean the old stuff has to go, or that the
bases
> and purposes of the service are any different.

The only old things that I'm suggesting "have to go" are BAD
ATTITUDES.
Don't make a red herring about "old stuff (CW, as an example) having
to go" ... that's NOT what I'm saying and I think you know that.

Again, what needs to go are narrow-minded, elitist, bad attitudes,
which discriminate against newcomers unreasonable (and revile
them publicly both here and often on the air), which reject and
fight irrationally against technical innovation, etc.

> What remains to be done in the USA? Is it not perfectly clear
> what the FCC wants to do?

I think that the FCC wants to promote a healthy, progressive
ARS that will meet is educational, public service, and emergency

disaster communications objectives into the future.

> Do you really think that S25.5 has any chance of lasting past WRC
2003,

Nope ...

> or that there will be any code testing left soon after that?

Once the requirement is removed from the ITU Radio Regs,
I think that MOST countries will rapidly (at least in terms of
"government speed") eliminate Morse testing from their
national regulations.

> Many countries are
> already moving to 5 wpm only - if they haven't already.

True .. and it is generally being viewed as "an interim measure"
pending the ability to completely eliminate Morse testing after
WRC-03.

> >Once that is accomplished,
> >I will have more time to focus on how other aspects of licensing
> >and testing can be improved ...
>
> The time to consider a new license structure is now, so that a
> consensus can be built. FCC will not want to do it piecemeal.

The FCC will prefere to deal with the elimination of Morse testing
and "consequential changes to other parts of its rules" in a
consolidated proceeding ... I would agree with that. However,
absent a clear "consensus" on "other issues" (that makes sense
to the FCC), I believe that they would entertain a "standalone"
Petition for Rulemaking on just the issue of eliminating the Morse
element, since that's a pretty simple matter administratively and
the "other issues" could well be more complicated and time-consuming.

> If we wait, they will table the whole mess for several years.

There is no guarantee that the FCC will be prepared to devote
the resources to a(nother) major revamp of Part 97 license
classes and test requirements, period. They may find that
merely eliminating the Morse requirement (and maybe giving
some HF privs to Techs) is all that they're prepared to tackle,
since they spent 2 years on "restructuring" just a couple of years
ago ... actually, they might do something like this ...
(pure speculation, of course) ... give Tech current General HF
band privs, with a slight revision to the Tech test, expand General
band privs to current Advanced, and leave Extra as it is (of course.)

Whether the tech has/is qualified for 1500W could be open to
debate ...

> >OK ... good point ... one doesn't HAVE to do it all at one sitting.
> >However, the number of questions isn't, IMHO, the defining factor
> >in the difficulty of the test(s) ... as Ed has pointed out, there's
a

> >the current one, which if I recall correctly runs about 250 pages!
>
> 200 - but that includes the entire Q&A pool, and detailed
explanations of
> the theory behind them.

It's still a lot more material to study ... at least in terms of
"intimidation
factor," compared to a 4 page study guide.

> I can easily write 5-10 pages on Ohm's Law for DC circuits. The old
LM devotes
> perhaps one small question to it. Yet Novices were expected to know
it and how
> to use it.

Yet, Ed and Cecil indicate that it basically "got them through"
to a license back in those days. (even if it didn't cover all of
the material in as much detail as todays' sutdy guides ...)

> >(Then another one of ?how_how_many_pages? to make the
> >move from Tech to General???)
>
> At least another 100.
>
> >I simply can't understand, given the MUCH larger amount of

> >tests are "easier" or have been "dumbed down."
> >(Not saying that you are saying that ... but rather that quite
> >a few make that complaint.)
>
> It's the METHOD.

That is, IMHO, a religious argument ... and the FCC
has set up the VE program, which gives MANY, MANY,
more testing opportunities, which is a GOOD thing,
and has given us the freedom to modernize and define
the tests by submitting questions to the VEC-QPC ...

> Here's a summary of the ideas Rich Plourde and I worked up.
>
> Underlying concepts:
>
> First, nobody should lose existing privileges

I would agree with this with the possible exception of
1500W for current techs, absent a better techical test.
(yes, many will disagree with me on this, but I believe

my arguments, while they may be politically unpopular
with some, are technically sound)

> Second, FCC isn't going to accept lots of license classes, so we
> stick with 3 classes

Agreed ... in fact, most countries have only 2 classes ...
at this time, from what I've seen, they're more or less
as follows:

something that's more or less equal to Novice/Tech/Tech+
level, with restrictions on power and/or frequency

something that's like General+Extra in our new system
(in other words full privs)

Do we really *need* 3 classes in a post-Morse-test
era? I'm not yet convinced that we do ... and I'm open
to hearing pro/con arguments for both 2 and 3 class
systems ...

> Third, the privileges should match the tests taken.

AGREED!!!

> For clarity, let's call the new classes First, Second and Third to
avoid
> confusion with the existing 51-year-old names. (The names aren't
> critical).
>
> Third Class is entry level. Easy to get - a Novice for the 21st
century.
> Simplified written test, focusing on the basics, mostly rules,
operating
> procedures and safety. Allowed power levels kept low to avoid
needing lots of
> questions on RF exposure - say, 100-150 W on HF/MF and 25-50 W on
VHF/UHF. Wide

probably all of
> 160 and the WARC bands. Third Classers can't be VEs, club trustees,
repeater
> control ops, etc - all to simplify the written. Callsigns are all
six character
> (like WA3IYC)

Wait a minute ... I don't think I want to change my callsign ... I've
had it for so long it's like a 2nd name ... :-)
>
> Second Class adds more power (400 W or so) and more subbands.
Written test is
> more comprehensive - about half and half rules and theory. Also
allowed to be

> VEs, trustees, etc. Callsigns are five or six characters (W6BXC,
WA3IYC) One
> years as Third Class required experience

Now YOU're advocating power limits ... :-) I have no problem with
that.
However, I *DO* have a problem with the "1 year experience as 3rd
class" thing ... if someone passes the test, they are qualified for a
license
of whatever class that test is for ... I don't care if they've never
been on
the air once ... if they pass the test, they deserve the license. I
also
believe that the FCC would have problems with this in legal terms as
a form of discriimination against otherwise qualified individuals.
>
> First Class is full privileges. Test is mostly theory, with rules to
match full
> privs.
> Calls signs are four, five or six characters. One year as Second
Class required
> experience.

Again, I *DO* have a problem with the "1 year experience as 2nd
class" thing ... if someone passes the test, they are qualified for a
license
of whatever class that test is for ... I don't care if they've never
been on
the air once ... if they pass the test, they deserve the license. I
also
believe that the FCC would have problems with this in legal terms as
a form of discriimination against otherwise qualified individuals.

PLEASE NOTE that as an Extra, "I've got mine" and would "map"
to what you call First Class ... so I have nothing personally to gain
by objecting to this "time in grade, have to wait a year before you
can upgrade" thing ... I find it objectionable because it is another
artificial barrier to progression by qualified individuals and will
tend to discourage the most capable newcomers.

> Bands are divided into subbands by mode type - CW, digital, analog
phone/image.
> Typical division 35/15/50% of a band

Wait a minute ... now you're trying to carve out a 35% set-aside for
"CW ONLY" ???? And only allowing 15% for digital???? I DON'T THINK
SO!!! That is TOTALLY unreasonable and inconsistent with the
realities
and the needs for the future. Since CW requires ~0.1 the bandwidth of
SSB, your proposed "split" would indicate approximately (35*10)=350
CW users for every 50 SSB users ... that is TOTALLY ridiculous and
unreasonable.

I would say "CW is still allowed EVERYWHERE it is allowed today, but
it certainly doesn't deserve an INCREASED status over what it has now,
either." The lower parts of the bands (now
CW/narrowband_digital_modes)
could remain that way.

The "phone bands" should NOT be expanded, but should allow the
use of wider bandwidth digital techniques (digital voice, imaging, and
higher speed data, for example) in addition to SSB/SSTV.

> Existing Novices and Techs get Third Class, existing Generals and
Advanceds get
> Second Class, and existing Extras get First. Existing hams do not
lose high
> power privs as long as they retain old license documents.

The mapping from the existing classes to the proposed ones is OK
with me .... it seems perfectly reasonable ...

I guess, with time, the power issue would "sort itself out" through
attrition to the point where it would be OK ... and while they're
allowed, I doubt that many existing Techs actually run 1500W ...

There is ONE "fly" in the ointment ... many Tech/Tech+ may be
repeater control ops/trustees ... I know I was as a Tech+ ... now
you're talking about taking something away from some folks.
Cover it in the test and allow it ... it's not "rocket science."

```

> where the PCTA is coming from.

You mean that they are looking to the future, instead of the
past? Maybe that's why they "... don't understand where the
PCTA is coming from ..." ???

> Therefore, IMHO, they are not qualified to judge the value of
> code testing as a licensing requirement.

Right, the fox ALWAYS wants to be in charge of guarding
the henhouse ... sorry, I'm not buying it (and, at one time, I was
FAR more Morse proficient than I could manage today, so I
DO have practical experience from which to make a judgement.)

> Those code-proficient hams who also possess high technical skill
> yet claim that code testing isn't necessary to keep the mode alive
> are merely electing to stay out of a political shooting match.

I don't buy that at all ... just as one example, I firmly believe that
Ed firmly believes that Morse will survive without Morse testing
welfare state support. I also believe that.

However, I ALSO agree with Ed that you and Dick and other PCTAs
who rail about how Morse can't stand on its own merits without the
coercion of a mandatory pass/fail, can't get an HF license without it
Morse test, and how those who aren't interested in learning and
using Morse are "dumbed down" ARE YOUR OWN WORST ENEMIES.

Dave, I think it was Hans who said that Marty was the VP Nokia. If you did make a correction, fine. It wasn't the point, but only makes the point I made stronger. Allow me to restate: "If a non-wealthy ham can have such an influence..."

Meanwhile, did you ever have a comment about how a large, influential organizations such as the ARRL, RSGB, or any other national organization might be able to influence some of these countries to open up to amateur radio?

That was the thrust of my comment prior to you and/or Steve misdirecting it.

> have no idea of what common practice in QSLing is.

True. I'd rather use the buro than take people's money. Except for the countries w/o buro's, of course. I've even bypassed the ARRL outgoing buro and mailed piles of cards directly to Box 88 to speed up the process for the former USSR.

> > Holy Cow! Is your QTH by itself or do you live in a subdivision?

Sounds fantastic. I'm tempted to turn in my life insurance for cash value and purchase a plot of land in south eastern Ohio to spend my weekends. A 60 foot tower is my little dream. That's one solution. Another is to go mobile to public parks and state forests and do "field day" on big contest weekends. I've got a nice deep cycle battery. Paper logs aren't a problem for "hunt and pounce" that I'd be using.

> > I can't even hear the clear channel stations on AM sometimes because of

> computers.

Last night was relatively quiet. I listend to the AM broadcast band for an hour before turning in.

I've put two of the the mfj split ferrite kits on one of the computers and I still get racket on my portable shortwave. That's six of them. My work laptop is quiet except when booting up, but I won't use it except for work. Perhaps I need to trade off my old 300mhz machine for an older laptop.

I've spotted an MFJ or AEA Loop at the other end of the division. I suspect that no one else knows what it is. I'm tempted to put up something small like the MFJ 1796 bushytail antenna on my deck and see what happens.

> nonsense which swept the nation.

Yeah, they slap the CCR's on befor the first dozer cut is made.

My first priority was to get my children in the Pickerington school district, one of only three school districts in central Ohio to meet federal guidelines. Then I bought one of the least expensive houses for sale here, which is 1/3 again what my home was in Illinois, minus one bedroom and 400 square feet. And my mortgage is only 1% higher. Thank God I only took a $5K cut in pay to boost the economy.

And there is no danger posed to Morse-proficient hams (or
the public in general) by non-Morse-proficient hams ... except
perhaps the "danger" that Morse enthusiasts will have to pro-
actively recruit new Morse enthusiasts instead of relying on the
"Morse welfare state" of mandatory Morse proficiency testing ...

> What's wrong with walking and bike riding? They conserve natural
> resources, reduce pollution, and are healthy exercise. If there's
> anything wrong with those modes of transportation, it's that too
> few Americans use them. Lack of exercise is directly linked to
> many of the top causes of death in the USA.

There's nothing wrong with walking or bike riding ... but they
are not required elements of a drivers' license test ... neither
is there anything wrong with Morse usage (by choice), but
likewise, Morse proficiency no longer has a place as a required
element of amateur tests (except for the legal requirement of
S25.5, for now)

And how is lack of Morse proficency related in any way to
any of the top causes of death? (or any other significant
```

negative factor for either the public at large, or even the
much smaller subset thereof that the ham community
represents, for that matter?)

I'm merely stating the facts, based on years of dealing with
emergency management folks through ARES/RACES ...
They DON'T want Morse radiograms ... they want/need what
I've said ... tactical voice and data communications.

> For a description of the use of Morse in a recent emergency
situation,
> go to google and dig up the first post in the thread "Hurricanes and

> Emergencies". Posted 10/10/99 by KT4ST.

First, if the most recent you can come up with dates to 1999,
that in itself is evidence that Morse usage in emergencies is
rare indeed.

Secondly, while I don't have the time to dig through google
archives of ancient history, I would strongly suspect that,
as is virtually always the case, any use of Morse was a matter
of operator choice, rather than operational necessity. If it was,
in fact, "the only mode available," that indicates a lack of good
planning and preparation.

> >The entire argument that "Morse is essential to emergency

>
> I would describe it this way:
>
> "What is the probability that a ham will be in an emergency
situation where
> Morse/CW is the ONLY available mode that will work?

With reasonable planning and preparation, "VANISHINGLY SMALL."

> Is that probability high enough to justify mandatory testing of ALL
> hams as a precondition for a license?"

Certainly not!!!!!

> Those are the pertinent questions.

I agree ... and I've provided sound, rational answers to both.

> code and theory!

First, let's admit that they are the exceptions, not the rule.

Second, let's admit that there are a certain number of true
child prodigies in the population who COULD actually learn
the fundamentals at those ages ... alternatively, there are
always what are sometimes referred to as "idiot savants,"
who have incredible memorization/association skills, but
are otherwise no more intelligent (often less so) than "normal"
people. Both of these categories are such miniscule portions
of the population that the can reasonably be ignored in terms
of judging whether a testing system has reasonable integrity
or not.

Finally, let's also recognize the fact that virtually all (completely
all?) of these (precocious in one way or another) youngsters
are the offspring of licensed hams who have coached and
coddled them all along the way ...
(however, they are STILL a VERY small abberation from the
norm)

Outside of rrap, I have seen relatively little of it. We had a bit of that sort of thing show up on one of the QRP lists, but the other old timers spoke up and it stopped.

When I was first licensed, I knew I was a rank beginner, but I didn't run into any 2nd-class citizen treatment. To the contrary, the old timers forgave my faux pas and helped me along. We still have a lot of that today. I am sure there were hams who would have taken out their resentment against me because the Novice license was so dumbed down, but without the internet, I managed never to run across them.

>Not bad for over 22 years of hamming. But if you can't affor it you might
>want to find a different hobby.

I have been a Ham for 30 years this October, BP...I can't afford to drop a grand on QSL's...Does that mean I have to find a new hobby too? Most of the other Hams I have known for a "long time" can't drop a grand on QSL's, either.

What does one's longevity in Amateur Radio have to do with one's ability to afford QSL cards? Does the local bank have some sort of "QSL Account", kinda like Christmas accounts? Musta missed THAT one!

>> So, to be sure that I understand you, the fact that I got on the air

>If anyone's in the market for something illegal, its not hard to find out
>who the bootlegger or dealer is.

It's called "cross band", Putz. Was very popular when the Brits had 70mHz privileges but no 50...They'd listen for us on 50, we'd listen for them on 70. Both statons are "legal".

>That was the thrust of my comment prior to you and/or Steve misdirecting it.

You misdirect yourself, Brian, with outrageous rants and infammatory accusations. You don't need anyone's help.

>True. I'd rather use the buro than take people's money. Except for the
>countries w/o buro's, of course. I've even bypassed the ARRL outgoing buro
>and mailed piles of cards directly to Box 88 to speed up the process for the
>former USSR.

In most cases, a single "greenback" is acutally a savings for them...especially some of the European countries where the dollar trades high.

German postage, for example, is almost 2 1/2 times higher than what it is in the United States.

"contrived"
> unless they had actually monitored the various nets and messages
passed.

I would assert (YMMV :-) that I am a reasonable person.

I *have* not only monitored NTS traffic nets, but have *participated*.

I *did* find a large preponderance of the messages passed to be
contrived as a means of "keeping the net going" ... in other words,
"the net" has taken on a life of its own and become a passtime for
those who participate, and they "do what it takes" to perpetuate its
existence so they'll "have something to do."

> NTS nets are all over 80 CW in the evenings.

So? HF voice and even VHF versions of the NTS nets
exist as well ... and the vast majority of the messages there
are contrived as well.

PLEASE NOTE: I am NOT objecting to people participating
in this activity "if it rocks their boat" ... I am NOT saying "it
should be stopped."

ALL that I'm saying is that it is NOT an "essential element of
emergency preparedness," as the very nature of the NTS and
the "radiogram" message format on which it is based are simply
NOT what the emergency management folks (who are, in effect,
our "clients") want/need in today's world.

>open to listen.

I think he was asking if posting information about a club web site would be unwelcome SPAM on this newsgroup.

It would probably be more suitable a post for rec.radio.amateur.misc, but that forum really has degraded into an insult fest. I haven't been there in quite some time. However, unless there is a policy twist to the club web site, .policy is probably not the place for such announcements.

Keep in mind that rrax is a worldwide newsgroup. If the club web page contains only information of interest to local hams, it really doesn't need worldwide exposure. If it has information that many hams can use, irrespective of where they live, I think a post about it on rram would be quite appropriate to the charter of the newsgroup.

Do note that some webmasters post information about their sites on a regular basis. For the most part, doing so does not endear them to the people they are trying to reach. I personally make a point not to make any use of sites whose webmasters post to all of the amateur newsgroups every couple of weeks.

I forget which site (yahoo?), but there is an ARRL email reflector. I
subscribed to it, but haven't seen any traffic for weeks.

Besides, if ARRL is going to be discussed, bashing or no, squirreling that
discussion away into its own newsgroup or discussion forum is probably not the
best approach to take.

I'm really close to giving up on you again, Brian. You bring up a tale of an FR6 you used to QSO. I told you that I didn't recall that. It was of little significance to me then. It is of little significance to me now. It isn't as if it'll show up as a Jeopardy clue.

Yeah, like many DXers whose QSO totals are numbered in the tens of thousands for each operation, I had nothing to do with QSLing other than sending logs to WA8JOC. Notify the QSLing police.

> > I did not make out QSLs for

That was for operation from Guinea-Bissau. I was active there from Feb. 1988 through early Sept. 1989. It was one illustration of just how wealthy I became from QSLing proceeds. How about this one? I didn't have to QSL anyone at all. I just didn't think there was much purpose to getting on the air from a rare spot, making all of QSOs and then not confirming the contacts.

Those who QSL'd direct with stamps, IRCs or a buck got a card direct. Many from the eastern bloc didn't have IRCs but included mint stamps from their country. They also got direct cards. Others, including U.S. ops who sent a card direct but without an SASE, got a bureau reply.

I wasn't out of band nor did I have any knowledge that they were. Do
you know the permitted 6m band allocation is in each country? Do you go
through your logs, looking for actual frequency and compare logs to a
country's 6m frequency allocation. If you do, you'd be called
obsessive-compulsive by medical folks.

> influence..."

Other non-wealthy hams have traveled to North Korea and have obtained
permission to operate. There are still no North Koreans hams. There
are still no radio amateurs other than foreigners in many countries.

>
> Meanwhile, did you ever have a comment about how a large, influential
> organizations such as the ARRL, RSGB, or any other national organization
> might be able to influence some of these countries to open up to amateur
> radio?

There's only so much that such an organization can do. If a country's
government if opposed to or is not warmly receptive to amateur radio
licensing, what could the ARRL do about that even with massive amounts
of money? If a country has amateur licensing but still has few or none
of its nationals licensed (Guinea-Bissau - 0, Botswana -several,
Tanzania - 0), what can the ARRL do to change the situation. The IARU
sent a good deal of study material, some handbooks and some basic 20m
transceiver kits to the Botswana Amateur Radio Society. The society
held licensing classes and had a functional club station with good
antennas. No locals ever became hams. No local ever even completed the

widely advertised (broadcast radio, newspaper, bulletin boards)
classes.
The governments of some countries are totally phobic of 2-way radio.
They associate it with lack of control or with spying. North Korea has
long been one of those places.

> That was the thrust of my comment prior to you and/or Steve misdirecting it.

Is that because you didn't have your facts straight and you went on a
tangent arguing those facts? If so, you've given us much power over
you. I guess we have the power to cloud men's minds.

> > If you believe what you've just written, allow me to suggest that you

> and mailed piles of cards directly to Box 88 to speed up the process for the
> former USSR.

The way to get a QSL card from some rare stations is to follow the
directions given by the op. I had numbers those who worked me QSL
directly to my home call. They only received QSLs because I had my
permanent address in those days changed to that of my QSL manager.
Bureau QSLing is slow. Not everyone wants to wait for up to several
years to confirm a QSO. As you pointed out, not all countries have
bureaus. In Botswana, we sorted incoming cards every month or two.
Cards were not forwarded to ops since we had no budget for that. They
had to pick up QSLs from BARS. There are times that we received large
numbers of QSLs for ops who had left the country and provided no
forwarding address. Can you guess where these cards ended up?

>

> 60 foot tower is my little dream. That's one solution.

That's the BIG dream for many folks. It is a good idea. I'm sure you
can find a spot high enough to give you nose bleed for not much loot.
My VHF enthusiast friends in Hinton, West Virginia had a little wooden
shack on top of a mountain across the New River. It was equipped with a
generator and a kerosene heater. They spent many weekends there since
there was no way to work anyone except locals in town.

> Another is to go

> for "hunt and pounce" that I'd be using.

The antennas won't be as good though. I bought an old Grid 386, a pile
of batteries and an AC supply for peanuts at a hamfest some years back.
It is perfect for Field Day activity. Log-EQF doesn't know it is
operating on an old, slow computer.

> Perhaps I need to trade off my old 300mhz machine for an older laptop.

I found that most of the crud emanating from my computer here in the
shack came from the monitor. A monitor extension cable and ferrites at
both the monitor and the computer helped greatly. It is a pain but
there are tempesting sprays available. You can take your monitor out of
the case and spray the interior of the case with the stuff. There'll
still be some residual noise because of the large glass area. It isn't
much fun to read through copper screen.

We're about two hours east of you SE of Wheeling. The houses are much cheaper, the property tax is unbelievably low and so is the cost of living. Of course there aren't many jobs but that isn't what I was looking for. I live out in the county where there is no zoning. There are more dairy and beef cattle out here than people.

From: n2ey@aol.com (N2EY):

>>I estimate about 20% of hams have useable proficiency in Morse code.

>I would say it's much higher.

I was including all licensed hams in my WAG. This includes no-code techs (and their equivalents in other countries), inactive hams who haven't touched their rig in years (and are renewing for whatever reason), no-code techs, etc.

All things considered, I think that 20% might be a bit high. The Japanese no-code hams skew that number way down.

I believe that Cecil and Dick are retired ... Jim, N2EY, I'm not sure of.

I think Len may be retired, or working as a consultant perhaps ... I'm
not sure.

AFAIK, everyone else "has a day job" ...

I have a "day and night job" myself ... with my day often running from
0600-1800 EST as I juggle issues between colleagues in Europe,
here, and on the US west coast ... Monday I have a 2+ hour conf.
call with Hong Kong at starting at 1900 EST ...

Then I have responsibiities in IEEE and NCI ...

I just don't see how I can raise my standing in the rankings
with the workload I presently have :-)

>those who participate, and they "do what it takes" to perpetuate its
>existence so they'll "have something to do."

And a good thing that is, because unless there is something to do, that net will not be available when needed or would be staffed by people who had little practice handling formal traffic.

>ALL that I'm saying is that it is NOT an "essential element of
>emergency preparedness," as the very nature of the NTS and
>the "radiogram" message format on which it is based are simply
>NOT what the emergency management folks (who are, in effect,
>our "clients") want/need in today's world.

The NTS is very much part of emergency preparedness. On a local basis, tactical communication is what is generally needed, but much of the emergency communications in and out of disaster areas consists of formal message handling. The health and welfare traffic is almost all handled through the NTS.

> I've said ... tactical voice and data communications.

No, you're merely *ignoring* the facts. It's already been stated that CW was used for traffic to and from FEMA, GEMA, and SOC during Hurricne Floyd. You need to disprove this before your off-the-cuff assertion would have any weight.

> First, if the most recent you can come up with dates to 1999,
> that in itself is evidence that Morse usage in emergencies is
> rare indeed.

Major hurricanes are relatively rare occurences. At least, "rare" according to your defining of something that last happened two years ago as "rare". What I don't understand is why you are now dictating what modes should and should not be used in emergencies. I thought NCI didn't favor or disfavor one mode over another.

Again, your agenda is showing.

Cecil tells us that he memorized the study guides and passed the exams in 1951.

There have always been people who can memorize; most hams today could not get by on rote memorization alone.

Very few people become hams because they don't want to learn anything. The fear is, IMHO, unfounded.

Then WHY, Carl, do all the "big guys" keep signing on to ARRL's MoU's for
providing the service? ARC, FEMA, DoS, DoD, Salvation Army, ...etc etc etc...?

Would the world fall apart if tomorrow they threw a disaster and Amateur
Radio didn't come? Of course not...but it WOULD significantly increase the
workload of incident managers and recovery workers without them.

would
> have any weight.

I've not disputed that Morse is occasionally used ... what I
have pointed out, however, is that it is virtually always a
matter of operator choice and not "necessity." That is a
subtle, but important, distinction in terms of the "Morse is
necessary" argument.

> > First, if the most recent you can come up with dates to 1999,
> > that in itself is evidence that Morse usage in emergencies is
> > rare indeed.
>
> Major hurricanes are relatively rare occurences. At least, "rare"
> according to your defining of something that last happened two years
ago

Last time I checked, 2002-1999 = three ... but that's a minor
point.

Again, I would assert that, if the most recent you can come up
with dates to 1999, that in itself is evidence that Morse usage
in emergencies is rare indeed.

> as "rare". What I don't understand is why you are now dictating what

> modes should and should not be used in emergencies. I thought NCI
didn't
> favor or disfavor one mode over another.

I am not "dictating what modes should and should not be used in
emergencies" ... however, I do have many years of experience
with what types of communications services our "clients" the
emergency management types, Red Cross, Salvation Army, etc.
want and need and I can categorically state again that Morse
radiograms are NOT something that they have use for to any
extent at all.

> Again, your agenda is showing.

No, I'm simply stating facts based on direct, extensive experience.

> > Secondly, while I don't have the time to dig through google

^^^^^^^^^^^^^^^^
What a pile of crap! Again, if Morse was, in fact, "the only mode
available," that indicates a lack of good planning and preparation.
(and that has nothing to do with your assinine comment about
"special ionosphere-charging satellite(s)" ...)

code test
> have not been opposed to the use of digital modes in ham bands.

I've personally seen, and know a lot of others who have also seen,
a lot of it ...

And what of Jim's proposal to set aside 35% of the HF bands
for "CW ONLY," 15% for digital, and 50% for SSB ?????

Sorry, but that pig has no wings ...

1st CW can go virtually anywhere now.
2nd, CW usage (considering relative bandwidths) doesn't
need or justify such a setaside.
And finally, that would be a major, crippling loss for the
digital modes ... perhaps something that some CW
enthusiasts would like, but NOT a good thing for the
future.

As I said, leaving CW/narrowband_data as they are
would be FAR preferable (and more realistic) than
Jim's 35/15/50 proposal.

While I don't support restricting CW usage, I would
NEVER support such a setaside, either.

If other hams choose to use a different mode, can they get the
same job done? In other words, is there anything that CW can
normally do during an emergency that other modes cannot do?

The argument sometimes reminds me of the guy who looked for his
lost keys under the street light (instead of where he lost them)
because the light was better.

If you think that, Steve, I feel sorry for your individual rights.
In the name of drug enforcement, the feds can seize the assets of
an innocent citizen. In the name of fighting terrorism, the feds
can seize the assets of an innocent citizen. "Law and Order" got
in a dig the other night. "Anyone willing to trade freedom for
security is likely to lose both." I know, it's an old saying, but
it was comforting to hear it on a brand new episode of "Law and
Order".

If an innocent Middle Eastern man is found carrying $10k in cash,
guess what would happen? Of course, you don't have to worry, because
you don't look Middle Eastern. But your time may be coming.

No, Carl, we're talking about what emergency agencies *want*. That's what you were discussing. Don't change the subject just because you were wrong.

Again, CW was used in traffic between emergency agencies, including FEMA, GEMA, and SOC. Obviously, they want it, else they'd never have used it. Capiche?

Hurricane Floyd impacted the US from September 14th through September 18th, 1999. I won't insult you by doing the math for you (unlike your petulant snipe towards me), but that works out to be closer to two years than three.

> Again, I would assert that, if the most recent you can come up

Frankly, I'd personally learn more about propagation and signal to noise
ratios before I started shoveling "crap" assertions towards anyone.

If you look at KF4ST's post on the use of CW during Hurricane Floyd,
he stated that conditions required the use of CW.

If, due to operator preference (or lack of preparedness to
use other modes) CW was all they were offered, of course
they'd "take it" even if it wasn't their first preference ...

You're right, of course on the timing ... I realized after I'd hit
the "send" button that Floyd would have been a fall storm.

Not at all ... what I'm suggesting is that hams should be prepared
to be able to offer the most useful services in ALL emergency
situations ... and that "the most useful services" are what the
agencies served would prefer/find most useful ... in my experience
of many years tactical voice (VHF/UHF for local and HF SSB for
long ranges, along with computer to computer transfer of moderately
large data sets, such as lists of supplies needed, damage/casualty
reports, etc. which can be sent FAR more rapidly, efficently, and
accurately than via Morse radiograms ...)

Frankly, as one who has designed HF voice and data networks
for the governments of entire countries, as well as for the US
military, I can confidently state that I have a rather thorough
understanding of the topic.

How many years of direct engineering experience do YOU
have in such areas???

Lots of statements are made on this newsgroup. Some are true and some
are false. Exactly what conditions required the use of CW? Minimum
equipment? Minimum power consumption? S/N ratio? Was CW transmission
done using a keyboard? If I, personally, had to transfer a lot of
data in a short period of time to a fast CW operator on the other
end, there would be no question - I would use a keyboard and double
my throughput.

I never said that there's anything wrong with bicycling or walking, but if
you have a one hour commute to work every day, which mode of transportation
would you want to use?

Absolutely YES. Whether that means EVERY ham MUST be tested on its use as
a condition of licensing is a completely different question.

Yup. The folks who insist on using an inefficient mode (voice) for jobs
where more efficient modes (PSK31, PACTOR, CW, to name just a few)
exist and could be used are like that guy.

I think Cecil is trying to snare me here ... to see if I am
consistent ...

A couple of years ago, I made a statement that I could
support a "CW Preserve" (CW ONLY) in the lower 25 kHz
of the HF bands as a compromise with the PCTA folks.
(Without removing/restricting CW usage from what's allowed
now ... which is virtually everywhere ...)

This was intended as a reassurance that neither I nor
NCI was seeking to eliminate Morse *usage*, just Morse
testing.

As I recall, the offer never met with any acceptance from
the PCTA group.

I personally could STILL support a LIMITED CW only area
like the bottom 25 kHz of the major bands, but NOT the
35% of the bands "CW ONLY", 15% digital, 50% phone
that Jim, N2EY proposed ...

While I am firm in my committment to not seek to restrict CW
usage (which is virtually all frequencies), I also will not allow
such an outrageous spectrum grab for CW at the expense of
digital modes which now SHARE the lower parts of the bands
on an equal regulatory basis with CW to go unchallenged.

That idea must have escaped while I was looking the other way!

35 percent of a band devoted to CW is pretty outrageous. Considering that CW has a smaller BW requirement, it is like setting aside *most* of the band for CW.

I don't think it accounts for the increasing popularity of the digital modes like psk31 either.

What exactly is the rationale for such a chunk of a band being set aside for this.

I don't think Cecil was trying to snare you at all, Carl. I think he was trying to find out if you feel the same way you did when you said that a couple of years ago -- if he remembers it at all.

If my memory serves, a couple of years before that, I had asked the same question and at that time, your response was a very firm "no."

My views have evolved since our first fight, Carl; I am sure yours have, too. Maybe even because of some of the disagreements we have had. :-)

I know...I saw...I saw Carl try to explain, very effectively I might add,
how those early "applications" failed, yet the problem was fixed.

It was then in Lennie's court to simply re-apply and be done with it, but
rather than take advantage of the fix (or express gratitude for the effort and
explanation) he went into his usual Lennierant about failure.

Seems to me that MOST of Lennie's posts are, when considered on thier
merits, about failure.

Carl, perhaps in 2027 when I retire...

You sound like you have a too full schedule. You need to delegate.

Brian

I think experience is part of the qualification. Just my opinion.

> I *also*
>believe that the FCC would have problems with this in legal terms as
>a form of discriimination against otherwise qualified individuals.

Why? How is it discriminatory to require some experience?

The main problem I see is that it requires newer hams to keep going back to
VE sessions. More work for them and the VEs and the FCC. Probably a dead duck
on that account alone.

>> First Class is full privileges. Test is mostly theory, with rules to

I've been an Extra for 32 years, Carl.

>I find it objectionable because it is another
>artificial barrier to progression by qualified individuals and will
>tend to discourage the most capable newcomers.

I say experience is part of the qualications.
>
>> Bands are divided into subbands by mode type - CW, digital, analog

>phone/image.
>> Typical division 35/15/50% of a band
>
>Wait a minute ... now you're trying to carve out a 35% set-aside for
>"CW ONLY" ????

Sure - why not?

>And only allowing 15% for digital????

Yep. Why not?

The PSK31 folks say that mode is only 50 Hz wide. Cecil drools over PACTOR II, saying it's about as wide as CW but much faster. Plus dynamic allocation of frequencies and all that.

Plus HF digital isn't all that common on the ham bands compared to CW or SSB.

>I DON'T THINK
>SO!!! That is TOTALLY unreasonable and inconsistent with the
>realities
>and the needs for the future.

Ah, I see."Nobody wants to ban CW", huh? Just take away the usable spectrum for the mode a little at a time until the CW folks have nowhere to go.

>Since CW requires ~0.1 the bandwidth of
>SSB, your proposed "split" would indicate approximately (35*10)=350
>CW users for every 50 SSB users ... that is TOTALLY ridiculous and
>unreasonable.

Why? Should we reward the users of wider modes by giving them more spectrum?
>
>I would say "CW is still allowed EVERYWHERE it is allowed today, but
>it certainly doesn't deserve an INCREASED status over what it has now,
>either." The lower parts of the bands (now
>CW/narrowband_digital_modes)
>could remain that way.

I'm looking to the future. Those rules are from when there were only a few digital modes, and when all hams could be expected to understand CW. That won't be the case in the future. Gotta accept change, Carl.
>
>The "phone bands" should NOT be expanded, but should allow the
>use of wider bandwidth digital techniques (digital voice, imaging, and
>higher speed data, for example) in addition to SSB/SSTV.

Why? That would only add to the QRM. Let the digital segment be where all that stuff resides. Digital modes are robust and spectrum efficient, are they not?

If 15% isn't enough, then go for 1/3 CW, 1/6 digital, 1/2 phone/image.

I see a double standard. On the one hand you don't want any "setasides" for CW, but at the same time you don't want to widen the 'phone bands. Makes no sense to me.

I say give each mode type its own backyard. If it's OK to fence in the phone/image folks, then it's OK to fence in the digital folks too.

>> Existing Novices and Techs get Third Class, existing Generals and

Exactly.
>
>There is ONE "fly" in the ointment ... many Tech/Tech+ may be
>repeater control ops/trustees ... I know I was as a Tech+ ... now
>you're talking about taking something away from some folks.

No - their old license documents would allow them to remain control ops. Just like an old CSCE allows a "Tech with HF" to stay on HF, even though the license says "Technician".

>Cover it in the test and allow it ... it's not "rocket science."

Not to you or me, but to a newcomer it's another thing to learn. The whole point of Third Class is a simple test.

btw, their isn't much "science" to rockets. They are mostly engineering. Wehrner Von Braun and many of his crew detested the term "rocket scientist". I recall he was quoted as saying:

"Scientists dream of doing great things. Engineers do them".

Some hams think such stuff is "old-fashioned". Look at
some of the vanity calls folks request. Or some of the
conversations on the 'phone bands.
>
>>The mentality that hams
>> are more than users of manufactured gear?
>
>No issue here ... I agree completely.

Yet how many hams, even those with lots of
"technical proficiency", build their own gear? Even from
a kit?

I would venture to say that the percentage of hams using CW/Morse on
the air is far greater than the percentage using homebrew equipment on
the air. Yet I read arguments that the technical stuff is justified because
hams
MAY build something, but the Morse test isn't. Seems like a double standard.

Since we don't actually have the old tests, it's impossible to tell
how tough they really were.

The issue of "dumbing down" is not about what it takes for newcomers to
get started, but what it takes for more/full privileges. The requirements for
full privileges used to be more rigorous than they are now - and I'm not just
talking about the code tests.

>(In short, they can't/won't accept that times change and ham

I think you are projecting your own like and dislikes on others. If the
written test is so easy, why are there any Tech Pluses left on the database
at all? It's been almost two years.

And my point is still valid - I think we would attract far more new hams if
a simple written and 5 wpm gave more privs than the current Tech-with-HF.

>> Both these can be fixed. See below.

>adequately, if at all.

You misunderstand. Redo the entry level written to focus on the basics.
Those who pass it get VHF/UHF. those who pass it and 5 wpm get
HF too. If/when S25.5 goes away, all of them get HF.
>
>> > or maybe

>turn it into CB."

I've posted this idea many times and nobody has gotten nasty about it. Note
that I am not talking about full privs. I'm talking about limited but
meaningful
and useful access to about half of what current Generals get on HF. That's a
LOT more than a Tech Plus or Novice gets today, but a lot less than a
General.

I have no idea what "dog in the manger" means.

However, he sounds a lot like those who say

"NO ......there should be no "freebie" upgrades where
required test elements were waived."

>Do you REALLY believe that ANY reason would have
>satisfied him and made him behave more civily to
>newbies? (I doubt it ... I just think he didn't WANT any
>newbies coming in to "clutter up 'his' bands.")

I didn't know him, and neither did you. Fact is, he saw the requirements
for full privileges dramatically lowered by the FCC for no given reason.

How would YOU react if the FCC said tomorrow that they were giving ALL
privileges
to Generals, Advanceds, Extras and pre-Mar 21 1987 Tech Pluses? And upgrading
all Novices to Tech-with-HF? No need to take any tests or even attend a VE
session,
just go to it. Only benefit of those higher class licenses would be vanity
calls. Would
you be happy and content if the FCC did that?

>There's
>still a lot of that today, despite your assertion that YOU
>don't see much of it ...

I only know what I see. When the boss of the local multiclub FD effort is a
Tech, and
everybody from newcomers to 50-year-Extras has NO problem working with him, I'd
say we have a pretty decent bunch.
>
>> Of course the way he did it was very counterproductive.

>:-)

Simple. How about "guy who can't accept change"? Or "the kind of guy who
is mad because you got a better deal than he did".

>> I was a newcomer in 1967, when "incentive licensing" was getting
>started. I
>> recall lots of hams being mad about losing "their" privileges. Most

>
>Yes, the FCC got a couple of petitions last year, asking that
>old "Class A" and Generals be "restored their God-given rights"
>by getting a freebie Extra ... both were denied as "old news".

So we have the same sort of attitude on both sides of the fence. Mike was mad because the FCC did a giveaway and the other folks were mad because the FCC did a take-back.

Me, I just went and got the Extra in 1970.

From 1951 until March 21, 1987.

>When they changed things
>to where the Tech was a lesser written test, they should have changed
>power limits, IMHO ...

Why? did they take out anything that was power-related? What they took out was mostly the HF stuff related to the General ticket.

> however, there is a question of "How do you
>enforce that?" My answer would be that posession of a rig or amp

>capable of producing more than the legal output for the
>class/frequency
>would be prima facia evidence of a violation.

How do you enforce that? There is no ban on nonhams owning ham rigs. The FCC can't even enforce the rules on 27 MHz - you think they're going to enforce something
like not allowing some hams to own amplifiers? No way!

> The power limit should
>be high enough to cover most common "barefoot" rigs, but well below
>1500W ...

For entry level, sure - because doing so does two things:
- simplifies the written test
- gives an incentive to upgrade

>> >> > That's

I agree! Including attitudes that call other hams names....

>Don't make a red herring about "old stuff (CW, as an example) having
>to go" ... that's NOT what I'm saying and I think you know that.

I've read almost all of your posts here since late 1997, Carl. It will take more than a few simple denials to convince me.
>
>Again, what needs to go are narrow-minded, elitist, bad attitudes,

I agree!

Also, what needs to go are narrow-minded, elitist, bad attitudes,
which discriminate against old timers unreasonably (and revile
them publicly both here and often on the air), which reject and
fight irrationally against reasonable requirements.

>> What remains to be done in the USA? Is it not perfectly clear
>> what the FCC wants to do?
>
>I think that the FCC wants to promote a healthy, progressive
>ARS that will meet is educational, public service, and emergency
>disaster communications objectives into the future.

Doesn't answer the question. What remains to be done to end code testing
in the USA? It should be clear to anyone willing to read the R&O to 98-143
that the FCC wants code testing to go away. The ONLY thing keeping the
5 wpm test is S25.5. FCC's actions for over a decade show they aren't
going to change their mind. There is absolutely NOTHING in the R&O to
indicate the FCC won't just dump Element 1 as soon as they can.
>
>> Do you really think that S25.5 has any chance of lasting past WRC
>2003,
>
>Nope ...
>
>> or that there will be any code testing left soon after that?
>
>Once the requirement is removed from the ITU Radio Regs,

>"government speed") eliminate Morse testing from their
>national regulations.

Exactly. The only delay will be the usual processing stuff. I would not
be at all surprised if the FCC simply did an "executive order" or some
such thing waiving Element 1 as soon as S25.5 goes.
>
>> Many countries are
>> already moving to 5 wpm only - if they haven't already.

>the "other issues" could well be more complicated and time-consuming.

Which simply wastes time. WRC 2003 is over a year away, and ratification
of whatever happens even further off.

Imagine if the FCC were presented a joint proposal that would fix a lot of
problems at once AND had widespread ARS community support.

>> If we wait, they will table the whole mess for several years.

That's the main point - reduce that intimidation factor. Imagine being able to hand a newcomer a ~50 page book that got them started, instead of a 200 page tome. Might get a lot more kids and family members involved.
>

>> It's the METHOD.
>
>That is, IMHO, a religious argument ...

Nope. Which test would you rather take for the SAME MATERIAL - one where all the possible Q&A were accessible for you to study, or one where they were a secret?

How about a test where you were not allowed to retest for a month vs. being able to retest right away?

>and the FCC
>has set up the VE program, which gives MANY, MANY,

>more testing opportunities, which is a GOOD thing,
>and has given us the freedom to modernize and define
>the tests by submitting questions to the VEC-QPC ...

The VE program exists to save money and FCC effort, nothing
less. Why pay FCC personnel to do what the VEs and QPC
folks do for free?

Back in the '70s the FCC would send out examiners if you could
guarantee them 10 people wanting tests.

>> First, nobody should lose existing privileges

>something that's like General+Extra in our new system
>(in other words full privs)

>Do we really *need* 3 classes in a post-Morse-test
>era? I'm not yet convinced that we do ... and I'm open
>to hearing pro/con arguments for both 2 and 3 class
>systems ...

3 classes lets us have an easy entry class and a truly meaningful
full privs class without having a huge step between entry and full privs.

Other countries do not allow nearly so much power as the USA.

>> Third, the privileges should match the tests taken.

>AGREED!!!

So there's the basics. More to come in a following post.

Some CW enthusiasts seem to think that they outnumber
all of the users of all other modes ...

> I don't think it accounts for the increasing popularity of the digital
> modes like psk31 either.

It certainly doesn't ... that's why I would oppose it vigorously.
(I would also oppose phone band expansion for the same
reason ...)

> What exactly is the rationale for such a chunk of a band being set
> aside for this.

I guess it's wishful thinking on Jim's part ... as I said, I could still
personally go along with a very small chunk of CW ONLY (like the
bottom 25 kHz of the major bands as I had originally proposed
and Cecil mentioned), but NO WAY would I EVER go along with
setting aside 35% of the band ... that's ABSURD.

You may get more exposure simply submitting its URL to the search engines.
People who want to find you will, and people who don't care probably don't read
these newsgroups either.

I honestly don't recall ever flatly refusing the bottom 25 kHz ... I
am
sure that a couple of years ago I did offer such a "Morse only
preserve"
as a gesture of compromise (again, not limiting Morse any more than
it is now, which is essentially not limited, but "adding" a Morse only
segment).

> My views have evolved since our first fight, Carl; I am sure yours
have, too.
> Maybe even because of some of the disagreements we have had. :-)

What to you think of Jim's suggestion that 35% of the bands be set
aside for Morse, 15% for digital, and 50% for phone?

As I've said, I think it's an outrageously ridiculous apportionment.

What do you think? Would YOU be willing to strangle the future
that much???

Makes sense to me. Assuming hams would be effective at providing
message services in emergencies when they've had little practice at
doing so in non-emergency situations would be like assuming hams would
be effective at using IEEE 802.11 devices to provide Internet connectivity
or other data connectivity services in an emergency when they've had
little or no experience at doing this in non-emergency situations.
Unfortunately Part 97 rules make it hard to even "contrive" connectivity
that would simulate the real thing in the latter case, so hams might be
better off yielding to those who've been getting real-life experience
under Part 15 when the emergency happens.

>>ALL that I'm saying is that it is NOT an "essential element of
>>emergency preparedness," as the very nature of the NTS and
>>the "radiogram" message format on which it is based are simply
>>NOT what the emergency management folks (who are, in effect,
>>our "clients") want/need in today's world.

But it is something hams can get practice at, unlike the provision
of high-speed wireless data access to wired networks which hams are
precluded from providing outside of emergency situations in any usefully
realistic fashion under their rules. At least there are guys who know how
to deliver formal messages.

On a barely related topic, anyone want to bet on the outcome of RM-10371?
It seems to me that the ARRL argument that WECA hasn't justified the need
for more 5 GHz spectrum, while accurate in the narrow sense that WECA
presented no hard data of their own to justify it, is a bit weak when WECA
does have a market for 2.4 GHz devices which doubled to $1.2 billion in
2001, a year that was universally bad for sales of almost all other data
equipment, plus a European study which successfully justified allocation
of the same spectrum there they are asking for here. The other argument
is, of course, the potential for interference with the licensed services by
the Part 15 devices, but while the ARRL refers to "aggregate interference"

at 2.4 GHz to support this claim it has very little to work with since there is very little documented evidence that this has actually bothered many amateur operators (i.e. "aggregate interference" can't be much of a problem for amateurs since the complaints are mostly theoretical) but substantially more evidence that it is a problem for Part 15 users (i.e. they need more spectrum so they can spread out).

In my opinion the ARRL is facing the prospect of defending Amateur spectrum which Amateurs don't use much from Part 15 users who demonstrably use lots of it, based mostly on the assertion that the Part 15 devices would interfere with Part 97 users in the purely hypothetical event that Part 97 users actually used the spectrum. The public interest would better align with ARS interests if amateurs actually made extensive use of these bands, but they don't.

Of course the best use for these bands is probably the high speed data applications that the Part 15 devices support, but Part 97 and Metcalfe's Law conspire to make any amateur use of the technology really boring (as demonstrated by the fact that even amateurs doing community-service- and hobby-type stuff prefer to use the bands under Part 15). I hence still think these bands are of little use to amateurs under Part 97 with its current constraints on encryption of content and that, without changes to Part 97, the public interest is probably best served by allowing the use of the bands for applications which don't have these constraints.

I find this particularly unfortunate since I find a lot of the commercial outdoor use of Part 15 equipment to provide for-pay service in these bands a bit offensive but without an active base of non-commercial users with priority on those frequencies, like hams could be without the constraints, the guys who get paid for their service have no incentive to pay for their spectrum and will instead end up "owning" a lot of the free spectrum by default.

Larry's too stupid to understand that a huge waste of time is spent trying to make me feel in some way bad about my callsign. I like it. I have no bad feelings at all about it and laugh at people like him who do. So, if Larry wishes to waste so much time, that is his doing...

Sheesh, check out the Presidential Records Act. I was listening to a report
on that on NPR today.

> In article <3c824edc_2@news7.fast.net>, "Carl R. Stevenson"
>
> I think experience is part of the qualification. Just my opinion.

We disagree ... I believe that demonstrating technical
competence by passing the test is sufficient and artificial
waiting periods are nothing more than an elitist pile of
crap that discriminates against qualified newcomers.
You're trying to "make up for" the loss of the Morse
test by adding another unnecessary barrier, plain and
simple.

I think the FCC will agree with me ...

> > I *also*
> >believe that the FCC would have problems with this in legal terms
as
> >a form of discriimination against otherwise qualified individuals.
>
> Why? How is it discriminatory to require some experience?

Because it treats equally competent/qualified individuals
differently on the basis of an arbitrary requirement.
I think the FCC will agree with me ...

> >PLEASE NOTE that as an Extra, "I've got mine" and would "map"
> >to what you call First Class ... so I have nothing personally to
gain
> >by objecting to this "time in grade, have to wait a year before you
> >can upgrade" thing ...
>
> I've been an Extra for 32 years, Carl.

I've been an RF engineer for 32+ years ... don't expect
me to bow down to your "superiority."

> >> Bands are divided into subbands by mode type - CW, digital,
analog
> >phone/image.
> >> Typical division 35/15/50% of a band
> >
> >Wait a minute ... now you're trying to carve out a 35% set-aside

for
> >"CW ONLY" ????
>
> Sure - why not?

Because it's an outrageous proposal ... CW and other narrowband
modes have shared the lower parts of the HF bands for many, many
years. Now you want 35% EXCLUSIVELY for CW ... I DON'T THINK
SO!!!!!!!
I think the FCC will agree with me ...

>
> >And only allowing 15% for digital????
>
> Yep. Why not?

Because it's totally inadequate and you damned well know it.
You just want to stifle the growth of digital modes because you
know deep in your heart that Morse ultimately won't be as
attractive and you want to "lock down" enough turf "all for yourself."
I DON'T THINK SO!!!!!
I think the FCC will agree with me ...

> The PSK31 folks say that mode is only 50 Hz wide. Cecil drools over
PACTOR II,
> saying it's about as wide as CW but much faster. Plus dynamic
allocation of
> frequencies and all that.
>
> Plus HF digital isn't all that common on the ham bands compared to
CW or SSB.

It's growing a LOT faster than you'd like to admit ... you're AFRAID
that
Morse can't cut the mustard, that's all.

> >I DON'T THINK
> >SO!!! That is TOTALLY unreasonable and inconsistent with the
> >realities
> >and the needs for the future.
>
> Ah, I see."Nobody wants to ban CW", huh? Just take away the usable
spectrum
> for the mode a little at a time until the CW folks have nowhere to
go.

NOBODY is "taking ANYTHING away from" Morse ... I stated before
that I would not support ANY reduction in the amount of spectrum
where Morse is permitted in the HF bands. NONE, ZIP, NADA ...
now you want to take 35% EXCLUSIVELY for Morse????
I DON'T THINK SO!!!!!!

> >Since CW requires ~0.1 the bandwidth of
> >SSB, your proposed "split" would indicate approximately (35*10)=350
> >CW users for every 50 SSB users ... that is TOTALLY ridiculous and
> >unreasonable.
>
> Why? Should we reward the users of wider modes by giving them more
spectrum?

The way things are, Morse users have access to ALL of the HF spectrum
Phone users have access to only about 50% ... since there are
arguably
more phone users than Morse users, the situation would ALREADY be
WAY inbalanced in preferential treatment for Morse ... now you want
MORE???
I DON'T THINK SO!!!!!!
I think the FCC will agree with me ...

> >I would say "CW is still allowed EVERYWHERE it is allowed today,
but
> >it certainly doesn't deserve an INCREASED status over what it has
now,
> >either." The lower parts of the bands (now
> >CW/narrowband_digital_modes)
> >could remain that way.
>
> I'm looking to the future. Those rules are from when there were only
a few
> digital modes, and when all hams could be expected to understand CW.
That
> won't be the case in the future. Gotta accept change, Carl.

I am ... you aren't ... you must be smoking something funny if you
think that Morse deserves 35% EXCLUSIVE use of the HF bands.

> >The "phone bands" should NOT be expanded, but should allow the
> >use of wider bandwidth digital techniques (digital voice, imaging,
and

efficient, are
> they not?
>
> If 15% isn't enough, then go for 1/3 CW, 1/6 digital, 1/2
phone/image.

You've apparently lost you mind ...

> I see a double standard. On the one hand you don't want any
"setasides" for
> CW, but at the same time you don't want to widen the 'phone bands.

> Makes no sense to me.

Makes perfect sense ... it's called "dynamic frequency allocation."
You want to use Morse, listen for a clear frequency and have at it.
You want to operate digital, your modem does the same thing.
(In the digital world, it's called CSMA-CA.)

> I say give each mode type its own backyard. If it's OK to fence in
the
> phone/image folks, then it's OK to fence in the digital folks too.

I can see how you'd like that, seeing as how your proposal would
grant Morse a HUGE, undeserved, unnecessary windfall at the
expense of everyone else. The more I think about it, the crazier
I think you must be to even have the cajones to even suggest such
a thing.

> >> Existing Novices and Techs get Third Class, existing Generals and
> >Advanceds get
> >> Second Class, and existing Extras get First. Existing hams do not
> >lose high
> >> power privs as long as they retain old license documents.
> >
> >The mapping from the existing classes to the proposed ones is OK
> >with me .... it seems perfectly reasonable ...
>
> Nobody loses.

Except that everyone but Morse enthusiasts gets royally screwed
under your absurd Morse setaside idea ...

You've apparently lost it man ... totally lost it ...

I agree 100%, although I only have just recently recieved my technicians license, I am going forward with trying to get the code down, and go for my general. Too many are relying much to heavilly on the modern communications, i.e. cell phones, internet ect. Well NYC found out on 09-11 that cell phones aren't all that dependable, with all ythat happened the cells were jammed. Similar thing happened in WV during the flooding there last summer, due to the terrain, many areas cell phones simply did not work.

Thats why these nets exist, and the ones participating need to keep their skills sharpened. You can't expect a sniper to hit at 1000 yards if he only fires his gun when it is a matter of life or death, to keep his skills sharp he needs to fire often. Why do football players and baseball players go to training camps before the season starts? To get themselves in condition.

In the disasters I have traveled to, good communications was the key, it either made the releif operation run smoothly, or the lack of good communications made things a real mess.

I don't recall the old saying about blind pigs. I do recall a saying about
a one-legged man in an ass kicking contest, but I'm not sure how it went.

So you didn't have a point?

> I'm really close to giving up on you again, Brian. You bring up a tale

Dave, I don't know why it upset you so. Only you can answer that. If you
can't recall why it prompted you to say that I didn't know much about DX,
then we'll never know.

> Yeah, like many DXers whose QSO totals are numbered in the tens of
> thousands for each operation, I had nothing to do with QSLing other than

Now Dave, you know that's not true. Our French ham on here told us what the
French 6M authorization was. You simply chose to ignore it.

> Do
> you know the permitted 6m band allocation is in each country?

A good DXer knows what the 160M authorizations are. Why is it different for
6M? Are you aware that there's a different 6M calling freq in the Pacific?
There's a lot to know if you want to be a DXer.

> Do you go
> through your logs, looking for actual frequency and compare logs to a

Yes, I've noticed that only DXpeditions activate some populated countries,
where they could have their own people on the air. Yet they don't.

I've got a deep cycle battery and a kerosene heater. Now I need to find
that hilltop.
I was looking in the paper today. Some of the "hunting/recreational"
property starts at about $2k/acre. Most is more.

> > Another is to go

That's a popular logger. My friend bundles it with his computer interface
kit. And I haven't heard of Grid since using the weather UTC, "Quick
Reaction Communications Terminal" The Grid interfaced with a Transworld
briefcase HF and a piece of comsec. The laptop is the least of my concerns
though. I need to get beyond mobile type antennas.

> > I've put two of the the mfj split ferrite kits on one of the computers

There goes another scout project.

I'm certain that an attic dipole will interfere with everything else in the
house as well. So what. I don't watch TV or talk on the telephone much.
;))

With small children that's not really a practical plan for us. I need a job
with some health care, and decent schools. Later on, perhaps.

Brian/N0iMD

> how tough they really were.

I took the full general 25 years ago at the FCC field office
in Long Beach, CA ... the writtens up through general today
are, IMHO (as an RF engineer and long-time holder of a
commerical license) not any easier than the "old" test.

> The issue of "dumbing down" is not about what it takes for newcomers
to

requirements for
> full privileges used to be more rigorous than they are now - and I'm
not just
> talking about the code tests.

Other than the "pig without wings" idea of "time in grade"
requirements (which the FCC abandoned years ago),
there are lots of people who disagree ... people who took
the old tests. I don't believe that the old tests through extra
were any more difficult than a commercial license test. I
passed that with flying colors 25 years ago ...

> >I'm NOT saying that rank beginners should have FULL

```

> How is it demonstrated?

By passing the tests prescribed by the FCC ... NOT by
"proving one's self" to "one's superiors" by "paying one's
dues" with stupid, arbitrary "time in grade" requirements.

> >Nobody is trying to "ban Morse useage" ... I think you know
> >that.
>
> From what I have read on this NG the past several years, I am

mode
> itself.

Like who??? Name some names ... call 'em out ...
it's certainly not me, nor NCI ... exactly WHO wants
to "end Morse/CW use???" And even if there were
one or two, or even a dozen, that fanatical about it,
do you REALLY believe they could muster enough
influence with the FCC to pull it off???

I guarantee you that "they" couldn't, even if "they"
existed ... are you seeing black helicopters, too???

> >There is "room for the old" in terms of what people

Based on your proposal for 35% Morse only setaside,
apparently you agree with the part in quotes, not the
whole sentence that rebukes the part in quotes.

> >"We have to make it really hard to get a license so that people
> >'prove their dedication and worth' and to make sure that we
> >are not 'over-run by the dreaded CBers';"
> >etc.
>
> We do have to be careful that what happened on 27 MHz does not
> happen to the ARS. Some would say it has already happened.

Oh, God ... now YOU're seriously raising "the spectre of CB" ????

Sorry, Jim ... I give up on you ... up until today, even though
we disagreed on some things, I thought you had some sense
and I had a measure of respect for you ... but you posts today
are just TOO FAR over the edge ...

I'm not going to waste any more time debating with someone
who's wacky enough to suggest a 35% exclusive setaside
for Morse, wants arbitrary "time in grade" barriers, and now is
seriously agreeing with the "we'll be over-run by CBers" stuff ...

Bye ...

Snap to, yourself, and find the part where I say, "In his own poor attempt at a troll..." There you go. I knew you could do it.

>As I said before the rule making, "What I fear most about restructuring is a
>lack of enforcement, and what I fear most about maintaining the status quo
>is a lack of enforcement." Code never has been a barrier to poor ham
>behavior, at least it hasn't worked in your case.

Don't look now, but I've said the same thing many times over. I've never claimed the code was an infallable "Lid filter," but it does have that secondary effect. Lids are usually activated by microphones, as opposed to being de-activated by CW keys. Trust me, there are an increasing number of Lids on the CW bands these days.

>Meanwhile, we are supposed to have enforcement once again in the name of
>Riley Hollingsworth.

Actually, we DO have enforcement again, in the person of Riley Hollingsworth. Do you doubt that he exists?

Cecil:

Maybe so, but I have, many times, stated that this "dumbing down"
is relative to previous, more stringent licensing requirements. Therefore,
your question is nothing more than one of your typical trolls.

Carl:

Well, my friend, this is America, and you're entitled to believe what
you believe, and so am I. However, I don't recall ever calling you
"your own worst enemy" just for believing the way you do. I have
no axe to grind when it comes to ham radio. I've lived without it
before, and I do believe I'll end up having to live without it again in the
future. I think it probably has a few good years left in it, and I plan
on exploiting them. But in the absence of what I consider to be
reasonable licensing requirements, including code testing to useful
proficiency levels, I don't think the ARS will remain viable for very
long. I hope we can agree to disagree, for it would seem as though
you have no choice.

I've said it before, and I'll say it again...I would dearly love to be proved
wrong, but I don't have that kind of luck!

I didn't state that it upset me. It would be hard to know that it would
be something I'd need to remember. It mustn't have seemed important to
me then and it doesn't seem important now. The fact that you've gone on
and on about would indicate that it occupies an important place in your
life.

>

> eQSL supposedly has the answer.

Not for me. I'll not be having non-cards printed and mailed. There
aren't many I need and my QSLing will decrease dramatically after
finishing up work on 6m and 160m DXCCs.

> > > When the word spreads that you'll work them out of band, then follow it

> French 6M authorization was. You simply chose to ignore it.

What's not true--that I was not out of band? I don't care if a French
ham breaks a French law. I only need concern myself with the radio regs
in the country where I operate.

> > Do
> > you know the permitted 6m band allocation is in each country?
>
> A good DXer knows what the 160M authorizations are.

I haven't memorized the 160m allocations in each country. I do give a
nod to the JA's once in a while. Otherwise I scan the band.

> Why is it different for
> 6M? Are you aware that there's a different 6M calling freq in the Pacific?

I don't memorize every other countries 6m authorization either. As to
the Pacific calling frequency, I'm not in the Pacific calling other
Pacific stations. The V7 station I worked on 6m was at 50.080 CW. The
numerous Pacific area stations I worked from Tanzania were around
50.110. Would you like me to supply a list of prefixes so you can check
to see if any of those stations operated outside their assigned band
segments?

> There's a lot to know if you want to be a DXer.

Well, good luck.

Kandid Karl isn't knowledgable enough on emergencies to understand that by the

time the Emergency Management people show up the emergency is
over, and what they will "manage" is the aftermath.

FCC cared what happened to the ARS when it instigated Incentive Licensing, and what
it got for its trouble was a number of people who upgraded their knowledge and skills, but
as well as a whole lot of harsh criticism. I think that has a bearing on how they view the
ARS today. Why should they make a serious attempt to coddle the selfcentered whiners
when they can hand it all off to the
QPC and VE's and just let nature takes course? I think history will show what
happens when there is no longer any challenge involved in an activity which
thrives on it.

You tell them it is easier to memorize the answers than to learn the material.
Do you really want to give an incentive to memorize the answers instead of
learning the material?

But how does meeting the present requirements dumb a ham down
compared to meeting the past requirements? Why is an Electrical
Engineer, for instance, dumber today than an Electrical Engineer
was a decade ago?

I'll guarantee, that if I get to Tech Plus, I'll take and pass the General
test.
The present General theory test looks easier than it was 25 years ago.
And I took the test for commercial radiotelephone back then, and did hold a
Second Class Radiotelephone (which was converted to General RT.).
And that was one tough test.
Actually, the tech test used to be the same as the general, aside from the
code.

377. Re: ARS Licensing in the USA Since WW2

A very interesting summary, and well written.
Having been interested in Ham radio when I was in high school, I do recall reading about novices having phone privileges on 2 meters way back, but did not know just when that was taken away.
Would I had found a mentor back then, but alone, I never got far enough along till in the mid 70's, when I did take and pass the novice test.
And only recently did my interest come back.
I passed the tech test last weekend, with an 84% average.
Next for tech plus or general.

What can you really expect from some of these twits?
He said that he liked to use 'fowl' language, and that might translate to
chicken band.
He might not even have any class of license, as it is possible that he was
unable in fact to even pass the present tech...

I think I may stick with 6 or up for the time, even once I get the tech
plus or general.
Actually, if I get the tech plus, the present general should be a snap if I
study a couple of weeks.
BTW, I moved to California from Rochester.
Possible we may even have met at one time or another.

Wayne K?6??? (waiting for the word on the FFC web site).

>under Part 15 when the emergency happens.

Why do you believe that Part 97 does not permit connectivity using IEEE 802.11b
devices? The only possible limitation I see is that some of the internet
content would not be permitted under Part 97.

>I hence still
>think these bands are of little use to amateurs under Part 97 with its
>current constraints on encryption of content and that, without changes
>to Part 97, the public interest is probably best served by allowing the
>use of the bands for applications which don't have these constraints.

The IEEE 802.11b devices can run un-encrypted.

>> Maybe even because of some of the disagreements we have had. :-)
>
>What to you think of Jim's suggestion that 35% of the bands be set
>aside for Morse, 15% for digital, and 50% for phone?

I don't see that it is necessary, at least not for the time being. Most of the QRM I have had on CW is from other CW operators. For the most part, the band seems to shake itself out pretty well. During the CW contests and operating events, the CW operation extends well into the "digital" part of the band, but on the RTTY contest weekend, the converse is true.

As to the figure, I would agree that a 35% CW only enclave is more than is needed for CW.

Of course, I think it is all moot anyway, because I don't think there is a change in hades that the FCC will consider any major mode apportionments ever again. I think if they were starting Amateur Radio from scratch, they would say "1500 watts; these are your band edges; stay within them."

So.... morse code is only good over long distances eh? Or is it only to be used in disasters, or other situations where voice won't go through, that MUST be a distance away?

There have been circumstances even locally where even on our fire dept. we could not communicate with Central Dispatch, because our radio's weren't able to hit the repeater, and we needed help, and maybe if there was an alternate method of being able to communicate, we could have gotten help faster. (particular case was we needed law enforcement assistance)

I can't beleive I am actually endorsing Morse code.... Dick ought love that!

True... but as it was stated somewhere before, a key thing that could have
been done was to come up with a PSA that commercial broadcasters are
required to air for free, a certain amount of their daily broadcast
schedule could have been done after the WTC incidents. How about working
with PBS? Pushing more interviews and shows on NPR are another couple of
good sources. Only cost is the initial studio/production times and I am
sure that there is grant money available for the cost of the tapes for the
broadcasters. (Anyone know if print media is required to do free PSA
related material?)

either.

I am not saying I do not like them. Not even close. I can learn alot from
them. I choose to stay away from the bitter ones though. I would be nice to
have someone to speak with on a local level that was in my own general age
group though. With any topic whatsoever outside of ham radio, it is hard to
"relate" to someone who is considerable older, as well as I am sure that the
older ones would have a hard time relating in the same way.

>

True... some people are better at teaching and giving presentations than other. I am not saying that professional teachers are necessary, but a someone who truly knows their "stuff" will display that confidence and knowledge very apparently. And that will rub off on a receptive individual. I have asked, begged, and have even offered to pay for a tutor to help get me over the morse code in the past, but do you think I recieved any help? Hell no.

>
>I am ... you aren't ...

Then why are you so reluctant to even discuss change in a calm,
rational fashion? You're defending the status quo.

> you must be smoking something funny if you
>think that Morse deserves 35% EXCLUSIVE use of the HF bands.

Nope.

Ever hear of "brainstorming", Carl? Where people just toss out ideas and
they get kicked around and maybe something useful pops out? One of the
key rules is that ALL ideas, no matter how weird, are discussed calmly. Most

brainstorm ideas are found to be impractical, of course, but the 'stormers are
not
attacked for coming up with weird ideas.

When I see "elitist pile of crap" and "wacky" and "smoking something funny",
it kinda makes me wonder...
>
>> >The "phone bands" should NOT be expanded, but should allow the

>
>You've apparently lost it man ... totally lost it ...
>
Not me, Carl. I'm calm, cool and collected. Just talking about ideas for the
future.
Maybe some of them are good ideas.

But for simply suggesting these ideas, you call me "wacky", "smoking something
funny", "crazy", "apparently lost your mind". The ideas are dismissed as "an
elitist pile of crap", "undeserved", "absurd", "discriminatory" and a host of
other
pejoratives.

All because you disagree.

Interesting.

Is this the example you want to set for newcomers?

But you didn't pass it. The "full general" included the 13 wpm code test.

> the writtens up through general today
>are, IMHO (as an RF engineer and long-time holder of a
>commerical license) not any easier than the "old" test.

It's the method. If a person knows the stuff, they're not much different.

I took the full Advanced in the summer of 1968 and passed first try - code
and written. That was when I was 14. The old pre-restructuring Extra has been
passed by at least one third-grader.
>
>> The issue of "dumbing down" is not about what it takes for newcomers

>the band for CW.

So we should penalize the narrow modes by allowing them less space?

If 35% is too much, what would be a reasonable number?
>
> I don't think it accounts for the increasing popularity of the digital
>modes like psk31 either.

They get their own space, as described in the idea. PSK31 is perhaps 50 Hz
wide - how much band does it need?
>
> What exactly is the rationale for such a chunk of a band being set
>aside for this.

Simple.

- Without a code test, there will be lots of hams on the air who don't know
the code and can't tell that they are interfering with a Morse/CW station

- Just as narrow and wide modes don't mix well, automated and manual modes
don't mix well.

>And what of Jim's proposal to set aside 35% of the HF bands
>for "CW ONLY," 15% for digital, and 50% for SSB ?????

That is incorrect. You have misquoted me.

The 50% is for analog voice and image. Includes SSB, SSTV, AM, NFM, etc. Not
just SSB.
>
>Sorry, but that pig has no wings ...

I have no idea what that is supposed to mean.
>
>1st CW can go virtually anywhere now.

Sure - but does it? How much routine CW is there in the 'phone bands? Virtually
none.
The 'phone bands are effectively off-limits to CW except for very special
cases, such as the
SSB QSO that fades and the ops continue on CW to finish up, or to coordinate
QSY to a
more useful QRG.

>2nd, CW usage (considering relative bandwidths) doesn't
>need or justify such a setaside.

So how much would be justified? I tossed out those numbers as a talking point. They're not
carved in stone anywhere.

>And finally, that would be a major, crippling loss for the
>digital modes ...

How? What's the current use of digital modes on HF by hams? What would be a reasonable
amount?

>perhaps something that some CW

Furthermore, there was EXTENSIVE use of 802.11b devices
at "ground zero" in the aftermath of Sept. 11th ... not by hams,
of course, but lots of use ...

As has been pointed out repeatedly, there is no legitimate
reason why hams CAN'T make good use of such existing
technologies.

> Why?

Because there's absolutely NO need for such a setaside and
it would be a very inefficent use of spectrum (when frequencies
were not being used by CW users, they would be forced to lie
fallow)

> If 35% is too much, what would be a reasonable number?

I've suggested that I could support making the bottom 25 kHz
"CW ONLY" ... but certainly no more than that. I don't think a
"setaside" is necessary at all, but this was suggested in a
sprit of compromise ... now you want to take 35% of the bands
for "CW ONLY" ??? No way!

> > What exactly is the rationale for such a chunk of a band being set
> >aside for this.
>
> Simple.
>
> - Without a code test, there will be lots of hams on the air who
don't know
> the code and can't tell that they are interfering with a Morse/CW
station

That is absurd ... one doesn't need to know how to decode Morse
in their head to recognize that it's there and avoid transmitting on
that frequency ... you're grasping a straws now.

> - Just as narrow and wide modes don't mix well, automated and manual
modes

> don't mix well.

On what basis do you make that assertion? In both cases there is
some "intelligence" involved in making the decision to transmit on
a given frequency or not ... in fact, in the case of the digital
modes,
there are two levels ... first, the operator can listen/watch the
spectrum
display to determine if a frequency is occupied, second, the machine
can listen before transmit and make a further determination ...

That some operators (either CW or digital) choose to ignore
the fact that a channel is occupied is a matter of poor operating
practice, which may be a matter for enforcement ... it does NOT
justify chopping the bands up into all sorts of mode-specific
enclaves with the result that otherwise usable frequencies go
unused.

The FCC already rejected this when the ARRL asked that
bandplans effectively be codified ... they also rejected it
when the CSVHFS asked for more "protection" for weak
signal modes ...

Once again, this pig has no wings ...

I don't recall ever disputing the fact that OOK Morse has a
relatively low occupied bandwidth ... there is more to "virtues"
than simply that ...

> >> it is like setting aside *most* of the band for CW.

Just an observation of how things tend to be slanted by Morse
enthusiasts in the direction that "they are the only thing of
importance or that counts."

No ... I've stated publicly that I would NOT support an expansion
of SSB sub-bands.

> >> I don't think it accounts for the increasing popularity of the
digital
> >> modes like psk31 either.
```

> >
> >It certainly doesn't ... that's why I would oppose it vigorously.
> >(I would also oppose phone band expansion for the same

Good spectrum managment (like good public policy) is NOT
based on a "popularity contest amongst the current incumbents."

> >> What exactly is the rationale for such a chunk of a band being
set
> >> aside for this.
> >
> >I guess it's wishful thinking on Jim's part ...

> >bottom 25 kHz of the major bands as I had originally proposed
> >and Cecil mentioned),
>
> Then you agree in principle - it's just the amount that's the issue.

I said "I could go along with it." That was an attempt at showing
a spirit of compromise and to convince the CW folks that there
is NOT an "agenda" to eliminate Morse USE.

I don't think it's necessary, nor is it really good spectrum
management,
but I could compromise for a SMALL slice like that.

> > but NO WAY would I EVER go along with
> >setting aside 35% of the band ... that's ABSURD.
> >
> Why all the shouting, Carl? You're sure getting worked up over an
> idea - a suggestion - a talking point. Why all the fuss?

Because it appears that YOU have an agenda to make a rather
large "spectrum grab" for CW ONLY use ... and I oppose that
idea VEHMENTLY because, as I said, it's bad spectrum management
and bad public policy.

Are you just trolling, knowing that such an outrageous proposal
would meet with stiff resistance from me?

> That is incorrect. You have misquoted me.
>
> The 50% is for analog voice and image. Includes SSB, SSTV, AM, NFM,
etc. Not
> just SSB.

Excuse me ... I believe (but may be recalling incorrectly) that
your text said "35% CW/15% digital/50% phone" ... it is correct
that the other "wider band" modes are also permitted in the
upper parts of (most of) the HF bands ... that wasn't really the
issue ... the issue was your proposal to set aside 35% of the
bands for CW ONLY.

> >Sorry, but that pig has no wings ...
>
> I have no idea what that is supposed to mean.

To explain ... the idea is a pig, an having no wings, it won't fly ..

> >1st CW can go virtually anywhere now.
>

> >need or justify such a setaside.
>
> So how much would be justified? I tossed out those numbers as a

talking point.
> They're not carved in stone anywhere.

No CW ONLY setaside is justified (or necessary).
(remember, I'm NOT suggesting taking anything AWAY from CW
users ... just objecting to your bad idea)

> >And finally, that would be a major, crippling loss for the
> >digital modes ...
>
> How? What's the current use of digital modes on HF by hams?
> What would be a reasonable amount?

Current use is not the only issue ... future use is also a
consideration.
A reasonable amount would be "as it is now." The current situation
provides the flexibility for usage patterns to adapt to conditions of
the moment, and also allows for long-term changes in usage patterns
without having to go back through the time-consuming process of
getting the FCC rules changed.

> >perhaps something that some CW
> >enthusiasts would like, but NOT a good thing for the
> >future.
>
> Not at all.

I agree ... it's not at all a good thing for the future.

> >As I said, leaving CW/narrowband_data as they are
> >would be FAR preferable (and more realistic) than
> >Jim's 35/15/50 proposal.
>
> I disagree.

Have fun trying to convince the FCC, since they've rejected
the idea of codifying sub-band by mode usage several times
recently.

> >While I don't support restricting CW usage, I would
> >NEVER support such a setaside, either.
>
> None at all?

Again, I said I would "go along with" the lower 25 kHz of the
major HF bands ... as a compromise, not because it's necessary,
despite the fact that it's actually not good spectrum management.

That is ABSOLUTELY as far as I would be willing to stretch in
terms of any sort of CW ONLY setaside.

I stand corrected ... when I refer to the written tests, I intend
that their entire content be included ... sometimes I tend to
refer to that simply as "technical competence" ... perhaps
a mistake on my part.

>
> >and artificial
> >waiting periods are nothing more than an elitist pile of

>
> Why all the name calling over an IDEA?

Because its such a BAD idea that it can't help but
evoke an emotional response ... note, however, that
the names were directed at the IDEA, not at individuals.

you
> getting so worked up over a simple idea?

Because I hate to see such bad ideas even tossed around
because they will give prospective hams who may read them
the (perhaps correct) idea that some hams would just as soon
erect barriers to keep them out (or at least keep them down,
below their level of ability/interest for as long as possible.)

> >> >PLEASE NOTE that as an Extra, "I've got mine" and would "map"

> >
> >I've been an RF engineer for 32+ years ...
>
> You were an RF engineer when you were 19?

Actually yes ... but the "+" was an error ... I think of
myself in round numbers as 52, but won't have my
birthday until later this year ... I skipped grades in
school and entered the job market several years
earlier than most ...

> >don't expect me to bow down to your "superiority."
>
> I don't - I was simply pointing out that I already "had mine", too.

OK ... I already knew that ...

> Don't expect me to "bow down" to your "superiority" either.

That was not the intention of my retort ...

> >CW and other narrowband
> >modes have shared the lower parts of the HF bands for many, many
> >years.
>
> "we've always done it this way", you mean.

I mean it's worked and there is no reason to assume
that it won't continue to do so ... besides, flexible usage
of the spectrum = good spectrum management.
> >You just want to stifle the growth of digital modes because you
> >know deep in your heart that Morse ultimately won't be as
> >attractive and you want to "lock down" enough turf "all for
yourself."
>
> Nope. I just want some room, that's all.

You have room NOW ... you have access to ALL of the HF
bands ... no need for a "Morse only setaside."

> > you're AFRAID
> >that
> >Morse can't cut the mustard, that's all.
>
> So all modes must compete as if in a battle? Why not simply allow
all
> modes everywhere?

Why characterize it as a "battle?" Cecil has used the term
"free market" ... as far as allowing all modes everywhere,
that is actually the way MOST of the world does it ... and it
really doesn't seem to have created any real problems.
However, given the history here in the US it's probably not
a politically practical option ... though it could result in better
spectrum utilization from a technical/analytical standpoint.
(Don't get excited ... I'm not proposing it ... I already said I
would not support phone band expansion.)

> >> Ah, I see."Nobody wants to ban CW", huh? Just take away the

> >I DON'T THINK SO!!!!!!
>
> The phone bands are effectively off-limits to routine Morse.

While that is a matter of practice, it is not "the law" ... besides,
the lower parts of the band are NOT so "full" with CW that the
CW folks NEED to expand into the upper part of the bands.

> So are the places where digital foks congregate.

How so? It may bea matter of practice, but it is not "the law".
Those frequencies are available for CW use, should you
actually NEED them, as long as there is not already an ongoing
QSO there ...

> Then why are you so reluctant to even discuss change in a calm,
> rational fashion? You're defending the status quo.

It's not so much that I'm "defending the status quo" but
that I'm incensed by your outrageous proposal to set
aside 35% of the HF bands for CW ONLY.

> Ever hear of "brainstorming", Carl? Where people just toss out ideas
and

There's a BIG difference between "wierd ideas" and "just plain BAD
ideas."

> When I see "elitist pile of crap" and "wacky" and "smoking something
funny",
> it kinda makes me wonder...

Sorry ... you really pushed a button ... but then, I guess you knew
you would ... maybe it was just a troll to see how hard I'd bite ...

> >> >The "phone bands" should NOT be expanded, but should allow the

I think that that is a rather rash, unfounded assumption.

> >> I see a double standard. On the one hand you don't want any

> >Makes perfect sense ... it's called "dynamic frequency allocation."
>
> Not for the SSB/AM/SSTV folks.

As I said, in purely technical terms, applying dynamic frequency
selection might well be the best solution (it's the norm in the rest
of the world and hasn't caused problems), but I recognize that,
based on US history, it would be a politically unacceptable
solution, at least for the foreseeable future.

attacks.

If I tossed out an absurd idea, I would expect to get flamed a bit
for it ... (heck, I get flamed for good ideas :-)

> But for simply suggesting these ideas, you call me "wacky", "smoking
something
> funny", "crazy", "apparently lost your mind". The ideas are

I admitted that you pushed my button ... I believe I said "I'm sorry"
above ... if not, I'm saying it here ... congrats for a "gotcha."

I would HOPE, however, that even newcomers would be able
to recognize grossly bad ideas and object to them ...

bands.

Maybe a very few individuals, but I don't see ANY evidence
of any sort of organized effort in that direction ... plus, do
you REALLY think the FCC would ban Morse (after all, there's
no good reason to do so ...)??? I certainly don't believe they
would even consider it.

> >I guarantee you that "they" couldn't, even if "they"
> >existed ... are you seeing black helicopters, too???

Sure does when you're talking 35% at the expense of the future
and that it's completely unnecessary ...

Mr. Thomas D. Batista
10124 45 Avenue
Corona, NY 11368

Mr. Gerardo Arias
278 Sharpe Avenue
Staten Island, NY 10302

RE: Amateur Radio licenses KC2DDD, N2IFU--Repeater Operation

Dear Messrs Batista and Arias:

It has come to our attention that you are operating an uncoordinated repeater with an output on 147.020 MHz and input on 143.020 MHz. The frequency 143.020 MHz is not allocated to the Amateur Radio Service. Our information also indicates that you use this repeater as a reverse auto-patch, that it is not being identified, and that it is causing interference to coordinated repeaters

Section 97.205 of the Commission's rules states that where there is interference between a coordinated and an uncoordinated repeater, "the licensee of the uncoordinated repeater has primary responsibility to resolve the interference." Operation on 143.020 MHz unlicensed is a violation of Section 312 of the Communications Act of 1934, as amended, and will result in fine or imprisonment.

Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), gives the Commission the authority to request information from a licensee regarding the operation of a radio station. Accordingly, you are requested to respond to this letter within 20 days from the above date, furnishing: 1) full details about the operation of the repeater; 2) the identity of control operators, if any; 3) the call signs of the users; 4) names and addresses of any unlicensed users; and 5) the location of the repeater. If the repeater is located on property that you do not own or rent, state the name and address of the landlord or site manager.

Address your response to 1270 Fairfield Road at the above letterhead address, and please be advised that Congress has made punishable a willfully false or misleading reply to a letter of this type. See Title 18, Section 1001 of the United States Code.

>responsibility to publish the notes/,eetings, etc.

Nobody said so. :-) But you damn well know that every
involved organization is going to take credit for it all later. :-)

>As before, take you gripe to the feds.

Wah, wah, wah. Yes, I have. :-)

>> No specifics were given, only standard boilerplate
>> assurances of honest, dilligence, and hard work.
>
>Which, you are free to belive or not.

Well, thankyew most kindly, but I think I've been able to do that
for a very long time already. :-)

>Your problem, again, seems to be more with the federal
>process than anything else.

Thankyew again for instant divination of my thinking-motivation-
whatever processes but those aren't correct. :-)

Let's see...I was talking about the WAC documentation at the
FCC International Bureau website, mentioned the "scribe" of
IWG-6, and stated who got "credit" for a complete change of
preliminary views of S25.1 through S25.6, the IARU.

Yes, indeedy, a FEDERAL agency! Also a couple of
organizations which do not get to vote at any world radio
conference. Did I mention NCI at all? No.

>Maybe no one else cared enough to want to see it.

That is indeed a possibility, absolutely, total agreement.

Are you saying that all else are "sheep" or too lazy to go
look? Are they sluffing off such tasks and letting the Big
Brothers do all they work for them? That doesn't look good
for their supposed "committment" to the ARS "community,"
does it?

>Those are the current buzzwords used whenever someone disagrees
>with the position taken. On Madison Avenue its called marketing.
>Should Ford offer its competitors equivalent "reporting" when
>Ford advertises what it is doing in development?

I've walked along Madison Avenue in NYC and driven a few Ford
vehicles elsewhere in the country. :-)

Let's summarize a large membership organization (having about
the same membership as the Academy of Model Aeronautics
and the same services...but underwrites far more insurance).

The ARRL is a private membership organization having a special
interest in amateur radio. The ARRL must sustain itself as an
organization with some means of funding to pay permanent staff,
its overhead (facilities, equipment, utilities, etc.), legal co$ts

(billings from a legal firm in DC). Judging from a prodigious amount of goods on sale, that is obtained largely from publication sales and resale of goods (mostly publications).

The membership magazine should be, and seems, self-sustaining through advertising sales so this is not a major source of ARRL operating revenue. Note: As a membership periodical it can claim a definite demographic group as proof of readership; newsstand or store sales are stated as less than 8 percent. Membership dues pay for the brunt of "fulfillment" costs, mailings to "subscribers." All other periodicals cost extra.

While ARRL publications and products may be ordered direct from Newington, there is always a "shipping and handling" charge in addition to the product cost. The product cost is the same as in-store price but an in-store purchase has no "shipping and handling" charge. The Ham Radio Outlet chain offers a large number of ARRL periodicals and one has to assume that HRO is in business to make a profit. If HRO can make a profit without charging "shipping and handling" to a customer, then one can safely assume that the break-even cost to the ARRL on any product or publication is lower than the stated cost to any direct purchaser. But ARRL ups the direct cost by the "shipping and handling" charge. That's definitely a profit on goods situation.

A better evidence of altruism would be to absorb shipping and handling costs if the direct sales prices are the same as over-the-counter prices. There is no "service to the membership" if they demand more money than stores to sell the same goods.

The above was an example. It is not a complaint. It is an illustration that the ARRL's so-often stated claims of altruism and "service to amateur radio" is a teeny bit towards the hypocritical. It is NOT altruistic in EVERY "service" it provides the radio amateur...yet the statements of the ARRL in all its publications and periodicals is that it DOES provide a "service." Is the "service" one of taking MORE money from its members or prospective members?

Somewhere, somehow the ARRL *MUST* sustain itself. It calls itself a "non-profit organization" but that is for legal purposes, taxation and so forth. Obviously, it DOES make a profit on publishing and resale of goods. It shouldn't pretend to be in the fabric business by trying to pull wool over others' eyes.

Ed Hare likes to bring up all the Directors and their unpaid "service" such as attending meetings in different US cities. What is always (conveniently?) left out of the mention is costs of travel, lodging, meals, rental of the meeting place, and other incidentals. None of those are free and nobody has pointed out their staying at a Motel 6 or eating at a MacDonalds for meals. One has to assume that VIAs (Very Important Amateurs) travel and stay "comfortably."

Someone or some organization pays for that. :-)

The ARRL assures everyone that these traveling Directors "give of their free time." That's believable. If that "free" stuff includes their paying for travel, lodging, meals, etc. out of their own pocket, then that becomes suspect. Altruism is a noble attribute, but continued claims of near-total altruism just isn't believable.

There are several areas where the ARRL is not consistent between claiming all that altruism and being a not-for-profit corporation which is obviously making a profit as a publisher and reseller. That's like saying a professional legal firm is working ENTIRELY pro bono (for no fee to client) all these years in DC. :-)

>Who cares, so what. It isn't the role or responsibility of ARRL
>to promote or report on the history of every club that exists
>or existed.

No one is asking that. I simply pointed out that the ARRL just doesn't acknowledge that an older radio club (the first one in the world) even exists. :-)

>As part of the car club I belong to, we do NOT mention other
>clubs that might compete for our members. WHY should we?

1. To show your club is "better," to bring car afficionados to your club instead of another one.

2. If you maintain a car museum, have a legal representative in Washington lobbying for auto laws, publish books about cars, and have a have a lot of "car services," and then say you are ten kinds of good people about auto afficionado-ing, it would seem right by example. :-)

>No outrage at all. Indeed, for you to EXPECT every public
>report by any organization to not be positioned in the best light
>for that organization is pretty simplistic.

The only "expectation" I have is for the ARRL to quit its schizophrenia of being an altruistic goods dealer with overtones of religious fanaticsm in being Big Brother.

One place to start is to reword article Two of The Amateur's Code...or reorganize as a religious order.

Another place to begin is for them to quit "talking down" to everyone in regards to everything from radio technical knowledge and the constant implications of it knowing what is best for the hobby. The rest of the radio world is NOT composed of impressionable teen-agers who have little exposure to radio.

ARRL membership seems to remain static at 170 K, less than a quarter of all licensed US radio amateurs. That

membership seems to be largely a core of long-timers, of Believers, of those content to let Big Brother do all the detail work. That isn't a good image and continual evangelism in the same manner is not winning new converts.

>I await the responses.

That is doubtful. Few bother to get involved, preferring to sit back, don't-bother-me-disdain spouted while they play in contests, or remain in the twilight zone of some fantasy world of their imagination and nostalgia of long ago. Some even come into this chat room to demonstrate how good and noble they are from a lifetime of devotion to Morseodism. :-)

A very few get their horns honked by others and cannot stand the noise. They honk back in irritation as if their horn is the only horn with any quality, are upset that so few recognize an unquestionable atrribute of theirs. QRM and QRN. :-)

Beep, beep

Phil, there was no "conning" evidence that I see. What I DO see is another in series of "I was there" thirty years ago, "we did all the dirty work, etc.". Let's review some history -

The NTIA wasn't created until 1978. In that creation the Office of Telecommunications Policy (OTP) became a part of the new NTIA. The OTP itself was created in 1970.

In 1995 and 1996 the NTIA sent its RSMS (Radio Survey Measurement System) truck to L.A., San Francisco, Denver, San Diego, and Atlanta. Except for Atlanta, each site was surveyed for a two-week period, 24 hours a day. In Atlanta the area was monitored before, during, and after the Summer Olympics, a period longer than two weeks. The truck and its equipment is perhaps best described in the Los Angeles survey report, NTIA 97-336. That report includes pictures and drawings of the truck and the software description for measurement and logging. The L.A. spectrum was surveyed from 108 MHz to 22 GHz. Feel free to put on your PE hat and review the report. Caution, some of the survey instrumentation did not exist in the 1970s.

Anyone may access a number of different reports I quoted, download them all for free by going to the home page www.ntia.doc.gov and

clicking on the left button "Publications." From there one can go to the Internet-accessible documents or the full list from 1978 onwards. For those not accessible through the Internet, NTIS can be contacted for an at-cost copy.

> Your taxpayers' dollars at work.....

I think it is well worth the taxpayer dollars. Radio waves do not owe any allegiance to any particular radio service. All radio services have to share EM spectrum. ONE agency to survey one locality detecting ALL users in a broad spectrum seems reasonable and logical. In putting on my "engineer's hat" and reviewing the NTIA RSMS description, I found no fault in the system parked up on Oat Mountain in Los Angeles for two weeks 7 years ago.

The alternative seems to be some hit-or-miss gobbling from long-timers well away from an area (much, much farther away than line-of-sight) who have no calibrated equipment or recording apparatus. I'm sure your mileage varies.

1970 was 32 years ago. 1995 was 7 years ago. The NTIA didn't exist until 1978, 24 years ago. Get the picture or do you want to "roar" some more?

On several reports, even in the 1993 Fed Standards on ALE and RF Modems, Fed Std 1045A and 1052, respectively, the report makers cite up front the advancing nature of radio technology and that new technology will come to pass to make some of the report conclusions obsolete...at which time they will update standards and reports to reflect changes. Which is better, doing a survey at a given date, establishing a standard at a given date, or grousing about older times, ways, and "we did it then" without specifics?

Times change. Eleven years ago the number of US households with Internet access was ZERO. In 2001 fully HALF of all US households have some form of Internet access. That varies from about 15% of households with aggregate reported income of $5K or less annually to about 85% with reported income over $70K. The Internet is growing worldwide as fast as cellular telephony, giving ALL a link to the rest of the world never before possible.

The subject is AMATEUR RADIO OPERATORS, not engineers. If an engineer
who holds an Extra Lite doesn't know morse code to 20wpm, he holds a
dumbed down
license. Is that to deep for you?

You consider Kim to be "ham radio"??? Poor fella.

Ryan, my belief has always been that hams should WANT to learn the most basic mode
of radiocommunications. Why wouldn't they, if they were serious about their avocation?
If you look into it you'll find that many hightech people who are hams DO know and
use it, and not just for novelty. The EME weaksignal work is a current use outside the
box. Who knows when it might come in very useful? Those who say "never" are
missing the point. Many earlier technologies are useful today.

>of radiocommunications. Why wouldn't they, if they were serious about their
avocation?

Oh, my! By that "logic" Carroll should expect "serious" hobbyists to know the
basic
radio technology, the FIRST ever in radio! Spark transmitters! Galena
crystal
detectors and "coherers!"

>If you look into it you'll find that many hightech people who are hams DO know
and
>use it, and not just for novelty. The EME weaksignal work is a current use
outside the
>box.

...and far MORE of the "hightech people" just disregard morse modes without
giving
it a second thought.

Moonbounce was first done in 1946. FIRST "eme" Dickie. It did NOT use morse.

"Shannon's Law" was written and published in 1947. It's examples were about
TELEGRAPHY! It established the basic relationship between bandwidth, signal-
to-noise ratio, and communications information rate.

Dickie DID NOT KNOW OF THIS back in 1998! Shame! Shame!

>Who knows when it might come in very useful?

Yes, always wear a J-38 in case one gets in an accident....

>Those who say "never" are missing the point.

Yes, our heads are normal, not pointy...

>Many earlier technologies are useful today.

Absolutely! Even today, the most modern, efficient, and reliable stagecoaches
ever made are found in Los Angeles, CA, and Old Tucson, AZ! Some are
true marvels of ingenuity, able to break apart on direct command! Why its
just a damn shame that none of them are ever used in public transport, isn't
it? Just think of the obvious advantages of traveling at a speedy 10 MPH
without generating any terrible pollutants such as steam or hydrocarbons

(except for a lot of horse manure randomly scattered). They might even be used in emergencies, replacing ambulances!!!

Beep, beep

I still don't completely understand, Dick. Let's take an Electrical
Engineer who is contemplating obtaining a ham license. As long as
he avoids becoming a ham, he is not dumbed-down? But just as soon
as he expends the necessary energy to study and become a ham, he
gets dumbed-down in that process? Dick, exactly how can learning
something new dumb a person down while avoiding learning something
new keeps him from being dumbed-down?

Dick, you mistake your impression of me. I have no "technial" background in radio--at least didn't. I certainly have some now. However, I do have a technical background in computers and the computing environment. I am A+ Certified, ITIL Foundation Certified, and have worked in the hardware and software environment with a focus on SQL based applications in the training environment (as trainer), and project/process management side of IT for quite a few years. I train the trainers.

It is for that very reason that I use ham radio mostly for the "distraction" and *don't* care to get involved in the technical end. I do too much of that at work. I am lucky in that my work is also an avocation.

I have absolutely no doubt at all that I have quite the capability to learn technical aspects of the ham radio hobby...however, I don't care to spend the time in ham radio when I do this stuff all day at work.

OK, no problem. But I think that the regs, safety and operating procedure stuff
are
actually more essential than the theory/technical. A ham who has no idea how
his rig
works can still use it safely, legally and effectively if he/she knows the regs
and other
stuff.

>the names were directed at the IDEA, not at individuals.

Not true.

The words and phrases "wacky", "smoking something funny",
"crazy", "apparently lost your mind" and others were aimed
squarely at an individual, not the ideas expressed by that
individual.

>> >You're trying to "make up for" the loss of the Morse

Sounds like you think the newcomers need to be patronized and
protected. I think they're smarter than that.

But let me see if I get this straight.

The person expressing the ideas shouldn't express them, because
newcomers might be turned off by them.

But it's OK for you to call the ideas "an elitist pile of crap",
"undeserved", "absurd", "discriminatory", and to call the person
expressing them "wacky", "smoking something funny", "crazy", and
"apparently lost your mind". That sort of thing won't have any
effect on newcomers' opinions.

Sorry, I disagree.

>that it won't continue to do so ...

Maybe so, maybe not. I'm simply tossing the idea out there.

> besides, flexible usage
>of the spectrum = good spectrum management.

Sure. But at the same time, both of us and K3LT (!) oppose
widening the 'phone bands. Don't you see the contradiction
between saying that it's OK to have a setaside for narrowband
modes but not OK to have a setaside for CW? Or the contradiction
that you want the users of the most popular HF/MF mode (for hams)
to get only about half the band, and their crowding enforced by law,
but scream and cuss because I only proposed 15% for digital?

>> >You just want to stifle the growth of digital modes because you

>yourself."
>>
>> Nope. I just want some room, that's all.
>
>You have room NOW ...

Sure.

>you have access to ALL of the HF
>bands ...

I've had all amateur privileges since the fall of 1970.

>no need for a "Morse only setaside."

Using Morse for routine operating in the 'phone bands is poor
operating, so right away at least half of HF is off limits. Operating near
digital folks may be construed as QRM, so it's poor operating to get too
close - and they may not be able to tell me I'm too close. With the
end of code testing it may get worse.

You have already said 25 kHz CW only would be OK. 25 kHz is 5% of
80 meters and 8.375% of 40 meters. 35% of 80 meters is 175 kHz
35% of 40 meters is 105 kHz. Somewhere in the middle a workable compromise
may exist.

Making the lower 25 kHz of 80/40/20/15 CW-only would mean that for a ham to
operate in the only CW-only HF subbands they'd need an Extra. Looks like
somebody wants to steer the newbies away from CW, maybe?

>> > you're AFRAID
>> >that
>> >Morse can't cut the mustard, that's all.
>>

"Your Honor..."

>but then, I guess you knew
>you would ... maybe it was just a troll to see how hard I'd bite ...

Nope. It was just an idea. A compromise to give everybody something.
That's how consensus is built.

Remember that what Mr. Plourde and I were trying to do was come up
with a license structure that would have broad-based support. That means
everybody gets something but nobody gets everything.

Imagine if a proposal could go to the FCC with truly broad-based
support from the ARS community. It'd be a shoo-in.

Maybe a CW-only section is a workable idea, maybe not. Maybe a different
percentage or a fixed number of kHz is a better way. Maybe there's no real need

for it.

>> >> >The "phone bands" should NOT be expanded, but should allow the

So the phone subbands aren't crowded either?

Maybe the solution is to characterize the subbands as "narrow" and "wide"
instead of "CW/digital" and "phone".

Not meant to be a "gotcha". Just an idea. You previously agreed to the 25 kHz thing, so the problem is really just a matter of degree.

>I would HOPE, however, that even newcomers would be able
>to recognize grossly bad ideas and object to them ...

If, indeed, they are bad ideas. But saying the newcomers shouldn't see them is a much worse idea.

Ahh, not so much of a problem- an idea for discussion. I heard it being discussed, and wasn't sure if it was just an idea or something that was going to become law of the land!

> > 35 percent of a band devoted to CW is pretty outrageous.

>
> If 35% is too much, what would be a reasonable number?

I think that the slice of band should be appropriate to the mode and the number of users. CW has less bandwidth need and judging by what I hear, I can tune across the CW sections and hear traffic, but no jams except once in a while.

This is in contrast to PSK 31, where I often have to wait or change bands, because there often isn't enough space to fit another signal.

I don't do much ssb except in contests, so I wouldn't be much of a judge of that.

> > I don't think it accounts for the increasing popularity of the digital

As described above, it gets crowded enough that you can't find a space to put out a signal.

> don't mix well.

I can understand that, but I don't know how often that could happen.
For PSK31, simply agreeing on one more frequency on each band to use
would double the capacity of the mode, if you know what I mean.

>regs and other stuff.

Define "other stuff." Each and every licensee is REQUIRED to
operate his or her transmitter according to rather definite technical
requirements. Those that have "no idea how his rig works" cannot
possibly operate it "safely" and avoid interference with others in
the same band or radiate spurious signals outside of allocated
bands. That would be ILLEGAL.

>The words and phrases "wacky", "smoking something funny",
>"crazy", "apparently lost your mind" and others were aimed
>squarely at an individual, not the ideas expressed by that
>individual.

How about the continued use of the pejorative "putz?"

...squarely aimed at an individual.

Apparently there is a great big hypocritical "standard" N2EY
is using in here. His "newsgroup cop" vision is quite narrow.

>Sounds like you think the newcomers need to be patronized and
>protected. I think they're smarter than that.

The ARRL does that quite often in their public statements.

>The person expressing the ideas shouldn't express them, because
>newcomers might be turned off by them.

Some in this chat room have very definite attempts at "turning
off" others, including attempts to bar them from expressing
opinions and ideas to the FCC.

Does N2EY wish to ignore them because they are such
wonderful representatives of the US ARS?

>Sure sounded like it. I don't bow down to anybody. Against my religion.

It sure sounds like N2EY wants everyone to bow down to him.

Is that the "personal religion?"

>Maybe so, maybe not. I'm simply tossing the idea out there.

No, those "tossing ideas" are only partially-disguised diatribes
against all who won't bow down to your demands for protected
spectrum space to enjoy your own personal mode preference.

US radio amateurs ALREADY have two EXCLUSIVE spaces
for code in the ham bands.

>Bruce Perens used that very word.

Is Bruce Perens in this particular thread?

>"they've always done it that way".

...therefore the status quo must be kept?!? That's NO
justification.

>MOST of the world doesn't have anywhere near the ham population
>that the USA does.

The rest of the world does not need to bow down to a minority
of US radio amateurs. Everyone should work together, but some
Ugly Americans wish to put their own personal preferences ahead
of everyone's.

>It's a matter of good operating practice. "The law" would side
>with the bandplan.

If the law is not "good," then attempt to change it. Between
alleged "good operating practice" and the law, the law will win.

>Take a listen when things are jumping...

Keep listening when there is no "jumping."

The law does not make special, reserved room in spectrum just
for contesters.

>The bands are not so full of digital....

...YET.

>Seems to me they are only "BAD" when you don't like them. Why not just
>calmly state WHY they aren't the best solution?

Seems to me that some are highly selective in becoming upset
over alleged "bad behavior." Does the chat room co...er newsgroup
cop not look at other inhabitants of this little enclave of licensed
egos?

>Maybe a CW-only section is a workable idea, maybe not. Maybe a different
>percentage or a fixed number of kHz is a better way. Maybe there's no real

>need for it.

Does N2EY advocate removal of the two CW-only bands in US
amateur allocations?

>You ever see me "flame" anybody for an idea?

Absolutely! By sheer volume of single replies! Been happening
from radio station N2EY for at least three years.

>If, indeed, they are bad ideas. But saying the newcomers shouldn't see
>them is a much worse idea.

Some one-by-twos will NOT ALLOW anyone "under" them to talk back,
or even contact their governments in using their citizenship rights.

Some one-by-twos insist on the eitist preservation of their "turf" as they
believe they "own" spectrum space by just license tenure.

Some one-by-twos read a past QST article on a tool or technique and
claim they have MASTERED it.

Some one-by-twos claiming "electronics design experience" cannot
recognize a common transistor family widely-used in all of electronics
for all of the time they have been licensed.

Some one-by-twos are skillful in morse code, think that it is the
defining ultimate mastership in amateur radio and look down on
others who do not share their highnesses' personal tastes.

Some one-by-twos need a two-by-four harshly applied to them...

>Why do you believe that Part 97 does not permit connectivity using IEEE 802.11b
>devices? The only possible limitation I see is that some of the internet
>content would not be permitted under Part 97.

There's a long answer to the question, but the short answer is that while
Part 97 permits connectivity it constrains the kinds of bits that can make
use of the connectivity, even though the communications channel technology
couldn't care less what the bits are. This means you need to control the
users who are generating those bits, which pragmatically means that you
can't provide service to arbitrary users in ordinary circumstances the way,
say, the Part 15 freenet guys do. This has two problems. First, providing
a communications service which has few or no users is boring, which is
probably why even hams do this particular thing under Part 15 instead.
Second, the service you'd likely be asked to provide in an emergency is
exactly the service to users you aren't allowed to provide in a fashion useful
to anyone in non-emergencies, that is to keep a reliable service operating
for those users under somewhat anarchistic, ad hoc circumstances. Assuming
the latter requires no skills beyond the ability to establish connectivity
is like assuming that the ability to erect a dipole makes one a skilled
HF operator.

Also, while I agree you might be able to run your own Internet access
circuit under Part 97, I think you are grossly underestimating how
constrained you would be to do this entirely legally due to the
increasingly pervasive use of transport- and application-level encryption.
For example, are you even aware when your browser loads an encrypted web
page? I only ever find out on the occasions when I try to follow a
link to a non-encrypted page and the browser gives me a warning after
the fact. There's a good chance your mail reader uses SSL as well,
and a lot of the password-protected text-based logins I have assume
that I'll be protecting the entire session running ssh. Avoiding
accesses to www.hotbabes.com is the least of the problems with Part 97,

you probably can't spend 3 minutes playing with your browser without sending or receiving traffic that would violate the Part 97 encryption constraints. Life is way too short to worry about this, which is probably why Part 15 looks so good for this stuff even to hams.

>>I hence still
>>think these bands are of little use to amateurs under Part 97 with its
>>current constraints on encryption of content and that, without changes
>>to Part 97, the public interest is probably best served by allowing the
>>use of the bands for applications which don't have these constraints.
>
>The IEEE 802.11b devices can run un-encrypted.

Turning off link-level encryption doesn't make the application-level encryption go away, so by itself this won't save you from Part 97 for use for Internet connectivity. But providing service to real users doing real user things, which is probably what community service with this technology amounts to, really makes you want to leave the link level encryption on both to protect the users and to protect others from seeing whatever it is that real people do. I'd personally prefer to spend my time worrying about how to provide a communications service then to spend it trying to figure out how to make people behave. YMMV

The last bit does encapsulate the dilemma well, however. You can run the link under Part 97 and spend your time worrying about what the bits are that the service is carrying, or you can run the link under Part 15 and worry solely about providing a decent communications service to move those bits. This is, unfortunately for Part 97, not a hard choice, as is demonstrated by how just about everyone playing with the technology, ham or not, has voted with their feet.

The ironic thing about this is that the community-service argument which amateurs have traditionally relied on as their first line spectrum defense is exactly the argument that WECA, by fixating on freenet use of the technology under Part 15 (even though most of the outside infrastructure that exists is actually supporting paid-for commercial connectivity), makes in support of allowing high-power Part 15 use of yet another 100 MHz or so of amateur 5 GHz spectrum (which will also likely end up mostly supporting paid-for outdoor services). Active use of the frequencies under Part 97 would be the surest defense of them but, given what the most interesting use of this spectrum seems to be, Part 97 is a millstone to be worked around and provides no advantages which come close to compensating as far as I can tell.

Carl R. Stevenson <wa6vse-shack@fast.net> wrote:
>Furthermore, there was EXTENSIVE use of 802.11b devices
>at "ground zero" in the aftermath of Sept. 11th ... not by hams,
>of course, but lots of use ...

"Not by hams", or more accurately, "not by hams under Part 97",
is the point. If Part 97 presents an obstacle to the uses
these devices are put to in normal times then it won't be
Part 97 operators supporting those same uses in emergencies.

>As has been pointed out repeatedly, there is no legitimate
>reason why hams CAN'T make good use of such existing
>technologies.

Hams DO make good use of the existing technology, just not
under Part 97. The fact that this happens is not a failure
of the hams, or the technology, which leaves only one thing
in the previous sentence. If you want to spend your time
supporting a communications service rather than being a censor
you'll do it under Part 15 rules instead.

The irony is that that it is WECA who now gets to take the
community service moral high ground when discussing future
use of additional amateur frequencies, and there's a pool of
hobbiests interested in RF communications out there (according
to WECA) who use amateur frequencies to play in but find no
advantage in becoming hams themselves. Given that they can't
do what they do under Part 97, and that their sole contacts
with the ARRL has the ARRL arguing to limit what they can do
under Part 15 as well in defense of bands that hams don't
really use (as hams), I'm sure their view of amateur radio
will be more positive in future.

Do you think there might be something wrong here?

That wasn't used by Jim toward Carl. That was used by Steve toward you.
I think he may be on to something.

> ...squarely aimed at an individual.

Yep, he seems to have nailed the target. Jim, on the other hand, isn't
responsible for Steve's use of the term and he has not used it himself.
Why does that have you all puffed up?

THAT is what you got from the ideas? I liked it better when you were
cuddling up to the ham radio newcomer and telling him about what a happy
old man you are. It was a kind of "feel good" moment, Len.

> US radio amateurs ALREADY have two EXCLUSIVE spaces

I can see you have worked yourself up into a lather.

> Some one-by-twos insist on the eitist preservation of their "turf" as they
> believe they "own" spectrum space by just license tenure.

...and they won't let you play until you get permission? It's okay,
Len, you can't still watch the others play.

> Some one-by-twos read a past QST article on a tool or technique and
> claim they have MASTERED it.

Time now for a dig at someone who won't bow to your superiority in the
use of the Smith Chart?

> Some one-by-twos claiming "electronics design experience" cannot
> recognize a common transistor family widely-used in all of electronics
> for all of the time they have been licensed.

Keep it up, Len. I think you have them right where you want them.
Maybe you can push the Feds to include memorizing transistor numbers and
characteristics in the exams.

> Some one-by-twos are skillful in morse code, think that it is the
> defining ultimate mastership in amateur radio and look down on
> others who do not share their highnesses' personal tastes.

Why would that bother you? You aren't a ham.

> Some one-by-twos need a two-by-four harshly applied to them...

...and you're just the guy to give it to 'em, huh? You're a lonely old
Git who just can't get no respect. It was probably good for you to get
it out of your system.

Krell, don't believe that "killfile" stuff. Dick opens and reads every single post--most especially those from people with whom he seeths in disagreement. The way he gets around responding to those posts directly is to hope that someone else does--then he can respond to "their" post. LOL A couple of weeks back he made a couple of mistakes and responded directly to at least one of my posts, and I think it was two.

> No, but I would consider your saying that I was giving them advice to be
>trolling.

That is not trolling, Dick; it is a difference of opinion. I note that you believe that everyone who disagrees with you is "trolling."

I believe that the choice of words you use saying that prospective hams want to get their licenses the easiest way so they are using word association to memorize 300 questions 3 times is giving them advice that the easiest way to get their ham license is to use word association to memorize 300 questions 3 times.

What does it mean to you when you say that the easiest way for prospective hams to get their licenses is to use word association to memorize 300 questions 3 times?

I believe that some prospective hams who read your words will see them as advice on what is the easiest way to pass the test. What do you think they will think of your telling them what you believe to be the easiest way to pass the test?

I believe that your advice is wrong. You believe that to be "trolling."

Have I summed it up accurately?

THIS IS PRICELESS. The man, term loosely defined and used in this instance, is just glorious in his obsession, not the fragrance BTW

Come on old man, put up or shut up! Better yet put up, shut and then drop dead.

Show everyone here your more than a cowardly little lion hiding behind some flat screen, typing on a flat keyboard with thoughts coming from a flat head.

Post your proof or get off my case asshole! I noticed your last diatribe about having proof went over like a lead Zeppelin, not the album, the German equivalent of Leonard H...a giant Nazi gasbag hi hi. I got literally 0's of people e-mailing me with copies. Seems you sent out none as no one believes you. HHmmm wonder why that is. After all you were in military unintelligence passing gas...errr millions of pieces of radio traffic all by yourself. And you did say "I" Len, not we as in team. Sorry, no back pedaling points here.

So let's see something here Leno. Try to avoid some of the standard Internet cop pitfalls by relying on newsgroup readers. In fact, post some DNS numbers, prove I am what you say I am. I doubt you'll even try because accusations are your life and when push comes to shove and proof is actually required, you'd rather run away screaming into the night.

Just as a starter, seeing that you only have one clue...according to an advanced google search, between 1999-2001 there were 27 posters using MicroPlanet Gravity as their newsreader of choice. So according to you, I must be ALL them!!!????!!

Better yet, having perused some threads, why not produce some of the "stalker" information you supposedly supplied the LAPD last year about

"me". Maybe a couple of taped phones calls? Coime on Lennie, this is better than Carl's smoking gun story.

Meet with Bill Sohl this past weekend at a hamfest. Pretty much had several laughs AT you Len. We both felt you cheese has fallen off your cracker...that you're several sandwiches short of a picnic although picnic-wise you are as annoying as gnats, that you are not only a few cards short of a full deck, you haven't any deck. There were lots more, but why bother boring the group with excessive verbiage. You seem to have that semi-retired job all looked up.

BTW,m for the group, I did find out that Len is in the advanced stages of Creutzfeldt-Jakob disease, the human equivalent of Mad Cow's Disease. Symptoms range from dementia to feelings of inadequacy and persecution and paranoia. Essentially the brain is reduced to a mass of jello, so have some compassion for the old geezer, he's has CFJ for all his life and his body is just now realizing it. Pretty soon, Len will be a mass of drooling, farting, pissing, shitting.....wait, he;s already there. Oh my gosh....next step...the big sleep...the never ending dream..the permanent eyelid for light check

Get a clue Anderson, I DARE YOU..I DOUBLE DOG DARE YOU. On a positive note, I've taken you out of my Bozo Bin so that I won't miss a single word of your multi-word replies. So fire away Len. Take your best shot cause I hear you only fire blanks.

As Bill would say...no cheers for you :-(

The one, the only Steve-KF2TI

Why must someone be a radio amateur to comment and have opinion on amateur radio, Dave? That doesn't make sense at all. Must one be in the medical insurance industry before an opinion can be made that medical insurance fails most people miserably and has made a mockery of the true nature of being a doctor? Must one be a teacher to realize they are underpaid?

You have a really weird reaction to people you don't like, but you also throw logic and reasoning out the window simply because you just can't say: I don't like what you just said and I disagree with it.

Len may be totally off-base. I don't know. I am surprised you spend time reading his posts; they all say the same thing. However, that he is not a licensed amateur radio operator has nothing to do with it.

>Because its such a BAD idea that it can't help but
>evoke an emotional response ... note, however, that
>the names were directed at the IDEA, not at individuals.

Many years ago, one had to be a General for a year or two before becoming an Extra. The premise was, IMHO, that there is learning that comes from being an active ham that is not necessarily going to show up in a written exam. That premise is valid, but the difficulty of having a VE system keep track of it makes it an unworkable good idea. It is probably also an unnecessary good idea. I don't see any major problems in the Amateur Radio Service that would be solved by a waiting period to upgrade. Minor problems, perhaps, because new hams tend to make mistakes that annoy old timers, but that is not sufficient cause, IMHO, to try to install such a system.

73,
Ed Hare, W1RFI

For the most part, but calling an idea elitist does imply that you feel the person posing that idea is elitist. It would have been more effective to simply call it a bad idea and explain why you felt it was not necessary. The "own worst enemy" syndrome can strike at any time! :-)

> Ahh, not so much of a problem- an idea for discussion.

That's what it is - and that's ALL it is at this point.

Although usually called "CW bands" or "CW subbands", the non-phone
parts of the HF amateur bands are all open to both CW and digital modes.
The ONLY "CW-only" subbands in US amateur allocations are, oddly
enough, 50.0-50.1 and 144.0-144.1

> I heard it being
>discussed, and wasn't sure if it was just an idea or something that was

>> If 35% is too much, what would be a reasonable number?
>
> I think that the slice of band should be appropriate to the mode and
>the number of users.

OK - but by that logic most of the subbands should be 'phone. Both Carl and I
and others think the 'phone subbands should not be widened any time soon.

>CW has less bandwidth need and judging by what I
>hear, I can tune across the CW sections and hear traffic, but no jams
>except once in a while.

OK - but that depends on the band and the time you listen.

>This is in contrast to PSK 31, where I often have to wait or change
>bands, because there often isn't enough space to fit another signal.

?? On what band(s)? PSK31 is not limited by law to just a few frequencies.

Let's suppose just for a second that my idea was actually adopted. 15% of
80 meters is 75 kHz. Is that enough PSK31 space? If not, how much would
be adequate?

>I don't do much ssb except in contests, so I wouldn't be much of a judge
>of that.
>
>> > I don't think it accounts for the increasing popularity of the
>digital
>> >modes like psk31 either.

>> wide - how much band does it need?
>
> As described above, it gets crowded enough that you can't find a space
>to put out a signal.

That may be an artifact of the use of the Small Wonder rigs that only cover a
few kHz. It's not part of the regs or bandplan that PSK31 cannot be used
anywhere
else except those few kHz.

> > What exactly is the rationale for such a chunk of a band being set

>>
>> - Just as narrow and wide modes don't mix well, automated and manual modes
>> don't mix well.
>
> I can understand that, but I don't know how often that could happen.

It happens today. With the end of code testing it can only increase. See
example below about 3579. Of course nobody is guaranteed freedom from
interference on the ham bands.

>For PSK31, simply agreeing on one more frequency on each band to use
>would double the capacity of the mode, if you know what I mean.

Sure - but there's no reason the existing frequencies can't be expanded as needed right now.

Take 80 meters - lots of PSK31 around the colorburst freq. If there's a clear spot a kHz or so up or down, it's perfectly legal to use it for PSK31 if the colorburst freq is busy.

BTW, the 3579 frequency has a tale to tell. This will probably draw all sorts of flames, but it's a true story.

3579 was the "glowbug" CW frequency for a long time. ("Glowbug" being an affectionate term for vacuum tube equipment, particularly simple homebrew transmitters). The reason was obvious - old colorburst xtals were common junkbox items. I have a couple in HC-6/U holders, salvaged from old color TV sets.

Then some ingenious folks designed a neat little PSK31 rig that used 3579 colorburst xtals as the front-end filter. So 3579 became a popular PSK31 frequency.

What was once a quiet haven for the use of simple rigs became full of PSK31 signals. The glowbug folks moved because out of consideration for the PSK31 folks, and because it's easier to change one xtal than to change the filter in the PSK31 rigs.

But there were bad feelings and misunderstanding on both sides for a time, in part because most of them could not communicate with each other on the air.

Do both glowbugs and PSK31 deserve an adequate place on 80 meters? I say YES. That may be electro-politically incorrect to some folks, but I think it's fair.

Of course, 3579 is 16% up from the bottom edge of the band, not 35% ;-)

Prospective hams who memorize the Q&A without knowing the underlying material
are doing it the hard way, Dick. Please stop advertising that it is the easy
way. My Conditional exam in 1952 was a lot more difficult than my Advanced
or Extra exams because I didn't understand the material in 1952 and I did
understand the material in 1975 and 2000.

When you tell people that rote-memorizing the word associations is the easy
way out, you are encouraging them to do exactly that. The truth is that
rote-memorization of 1000 word associations is NOT the easy way. What you
are telling them is incorrect and you are encouraging them to do it the
wrong way.

>
> Dint think you would.

I see that you edited out the embarrassing question that I asked and you refuse to answer. So I ask it again: How can studying and learning something new possibly have the effect of dumbing someone down? You have said it doesn't dumb down the individual ham but does dumb down the ARS. But the ARS is made up of individual hams so how can the ARS be dumbed-down if the individual hams are not dumbed-down?

Your error is in equating CW to some sort of smartening-up. The majority of the most brilliant people in the history of the world didn't ever know Morse code, Dick. Your premise is in error. You cannot gain smartness by learning Morse code. The FCC knows it and you cannot help but know it. Your delusions of smartness associated with Morse code just won't fly.

The problem is that the number of users varies with time. If allocations
are made based upon present use, they will soon be wrong and must be changed
periodically. The present HF division of narrow band modes Vs wider band
modes seems to adequately meet the needs, IMO.

>Engineer, for instance, dumber today than an Electrical Engineer
>was a decade ago?

Cecil:

Because, a decade ago, an Electrical Engineer with an Amateur
Extra-class license also had to pass a 20 WPM code test, which
means there was a good chance that he was also a proficient CW
user in addition to whatever technical skills he brought to the hobby.
A present day E.E. with an Extra Lite most likely doesn't have
any useful proficiency in the code -- and is, therefore, "dumbed down"
compared to his antecessor.

Ed:

Cecil asked me to pick a year and a substantial sum of money. If he doesn't think he can make it to 2105, that's his problem -- not mine! If he wants to keep wagering with people based on when things are going to happen, he should have probably taken better care of his health when he was younger! By the year 2105, the ARS may have been dead for 88 years or so, but that's when I pay off the bet, not one decade before!

You've got the bet backwards. You are the one who is betting the ARS
will be toast. From what you say, I surmise that you do not think
the ARS will be toast during your lifetime. So I am assuming your
sky-is-falling rhetoric is so much hot air.

If the ARS won't be toast by 2010, I would say your predictions
are wrong.

Morse code has nothing to do with being dumb or being smart, Larry.
The FCC said so. Most of the great minds who have ever existed
didn't know Morse code. Einstein probably didn't know Morse code.

It is amazing that you can believe an Electrical Engineer can be
dumbed-down by passing an amateur radio exam. Exactly how many
IQ points does a person lose when he passes an amateur radio
exam? Does it happen during the exam? Or does it wait for him
to receive his ticket in the mail?

It always comes down to this: An idea not in keeping with your view of
ham radio nirvana is BAD. An idea put forth by you is a GOOD idea.
Your explanation of names being directed at an idea leaves much to be
desired. The idea can't understand or respond to your name calling.

A couple of times you've trotted out, "I think the FCC will agree with me", as if you and the FCC are great pals now. I don't believe that you have an inside track on thinking among those who regulate amateur radio.

Why state that someone is "AFRAID". Cecil's "free market of modes", as
I recall, dealt with doing away with mode-specific testing--not with

lumping all modes together in the same piece of spectrum.

> > >> Ah, I see."Nobody wants to ban CW", huh? Just take away the

In some areas of the world where there are few hams, it works quite
well. In some European countries, it hasn't worked well at all. The
hams of some European nations are embroiled in constant arguments over
the same thing you propose.

Yup. Plus many of the trends they were concerned about, like reduced
homebrewing and increased "appliance" operating, did not diminish. And the
FCC had a ton more admin work to do without getting more resources to do it
with.

> I think that has a bearing on how they view the ARS today.

Sure. There was even a proposal to restore pre-incentive licensing Generals
and Advanceds to full privileges. I can imagine what the FCC thought of
THAT one!

> Why should they make a serious attempt to coddle the selfcentered whiners
> when they can hand it all off to the QPC and VE's and just let nature takes
> course?

That's part of it, but I think the main issue is simply lack of resources
at the FCC. They don't want more admin work, they don't want complex ARS
rules, and they DO want a "healthy" ARS. How one defines "healthy" is a

different issue.

I think one thing that may be driving FCC's thinking is the continued growth of "freebanders" and pirate stations. FCC may think that one way to control these folks is to make it easier for them to get ham licenses. If nothing else, enforcement against licensed folks is easier than against unlicensed ones.

Does this mean we will be "overrun by the unwashed hordes"? Maybe not, because those folks probably aren't going to be very eager to give the feds their SSN, address, etc., etc., then abide by a whole bunch of rules and regs.

> I think history will show what happens when there is no longer any
> challenge involved in an activity which thrives on it.

Good point! The FCC is leavving the challenge up to us. After all, anyone can submit questions for the tests to the QPC.

????? You have lost me here, Mike. Unless you're using a single frequency transmitter, such as a Warbler which is crystal controlled that should never be happening. And even on a single
frequency with a 2400 hz bandpass, there's room for two QSO's in every 100 hz. While there
are sometimes signals quite close together I have never seen a time when there was no
place to dump another signal into the passband.
All that makes me wonder what you're using
as a software package. If it's Digipan (or some version of Digipan) it's quite easy to
find a slot to work in. (I like the "MIXwin 2.03" package since it has all the commonly used
digital modes in a single software load, and requires only the click of the mouse to change modes, unlike others where you have to dump one mode then load another). It makes it
very easy to change modes when you hear (or see) another signal that interests you. A
couple clicks of the mouse and you jump from PSK31 to Hellschreiber or RTTY, while retaining the 2400hz passband waterfall display. It's a spectral display for that range
and you soon learn what each mode signals look like.
You may be copying a PSK31 station and see a RTTY or PACTOR signal start to transmit up the band. Very neat. MIXwin even receives PACTOR, though it doesn't allow you to transmit.

What is so curious is that if what you say is true, the situation will take care of
itself.
If it's so much more difficult for persons with no technical training to learn the
material,
they will do so and will soon abandon rote memorization of word associations. This
being true, why so much fuss from you on the subject?

>

How does Gordon West train his students to pass the Tech test in a single weekend?
Does he screw off the tops of their heads and pour in knowledge, or does he teach
word associations? It wouldn't be a problem if it was limited to the entry level,
but they can
as easily do it the same way twice more to glom an Extra

>

Those who know will see it as the truth, as opposed to the smoke you insist on
generating.

What's odd is that you think all that consists of me giving "advice" when what it really is
is nothing more than a distillation of several years of VE activity.

For hams with a technical background, that is correct, as I have already stated several times. For those like Kim, who have no technical background, what you say is NOT correct. Ask Gordon West.

> Please stop advertising that it is the easy

Of course. You didn't have the exact same questions with their exact same answers given in advance in the form of a pool to study before the test.

>
> When you tell people that rote-memorizing the word associations is the easy
> way out, you are encouraging them to do exactly that.

So stating facts is encouragement. It could as well be discouragement. I don't get to set the definition, nor any other part of it.

> The truth is that
> rote-memorization of 1000 word associations is NOT the easy way. What you
> are telling them is incorrect and you are encouraging them to do it the
> wrong way.

What you are telling us all is incorrect. For people with no technical background, rote word association is definitely easier than trying to learn material *from the question pool*.
If one sets out to learn the technical material he'll have to look well beyond the pool for much
of what he needs.

No problem with the answer to that one. It happens when FCC drops the
requirements
so that he can pass the exam without the necessary skill and knowledge. From
that day on
anyone getting that license is getting a dumbed down version of it. That
says less
about the person as about the service in total. There is nothing extra about
a
dumbed down Extra class license.

Er, as of sometime last summer (4/15 maybe?) the ten question multiple

Makes it a bit harder to pass the test, but not much.

Sean.

>>
>> What were the pseudonyms used by you? Avery Label? Leftover 21?
>> NOCWSKILLS? Were they all you, Len or just the other voices from within
>> you?

I've never used those screen names. I've always given my real name under any screen name. My real address has been printed in several electronics-oriented periodicals and publications.

>I must be ALL them!!!???!!

Who knows? :-)

Recorded Multiple Personality Disorder medical writings indicate as many as 31 within a single individual.

>Better yet, having perused some threads, why not produce some of the
>"stalker" information you supposedly supplied the LAPD last year about
>"me". Maybe a couple of taped phones calls? Coime on Lennie, this is
>better than Carl's smoking gun story.

That information is still on file with the Los Angeles Police Department along with copies to Pacific Bell Security. What they are doing as part of any investigation is not public information. The fact that I did file information and an accepted complaint is on the LAPD logs. That submission included an aircraft tail number (registry) which can be verified by police with the FAA. FAA tower communications have long been recorded. The LAPD has a special section to handle Internet fraud and general criminal behavior activities on the Internet.

I cannot know what Pacific Bell Security does in any detail other than Pacific Bell electronic switching computers keep an automatic record of all calls. That information is only supplied to authorities. Pacific Bell does provide a number of services such as "Privacy Manager" and "Caller ID" which do supply a caller's number directly regardless of whether it is answered or not. We have a rather complete record of ALL callers over a period of two years that our all-mode telephone terminal automatically provides. During the time we were gone

last year, that automatic log indicates the only anamoly as seven calls from the same number in the Anaheim area. At least one of those calls is indicated to have left a voice message. That message was not retained, dumped during our absence due to later voice messages received (digital message recording).

Pacific Bell security is vague on what they actually do. They did confirm the caller ID number recorded on our terminal and the general location but would not identify the exact nature of the calling terminal. They alleged but did not state that it is "like a pay phone." The calling number is not traceable through the ordinary "reverse" telephone number services. Pay telephones in this area are not traceable to any but authorities for rather obvious reasons.

That single telephone location used in probable harassment is over 30 miles from our residence, over 45 minutes driving time by the quickest route. Considering this is a "neighborhood watch" area, alarms work just fine, and our house sitter was dependable, there was no indication that "jonathan" was close to this "hood" as promised. Those promised "photos" (in another thread) never materialized anywhere except in someone's disturbed imagination.

Stalking, of any kind, is not something trivial around this metropolis. Police and other authorities actively look into all cases. Fortunately, most of them result in no illegal or harmful action, those started by meaningless posturing of over-imaginative disturbed individuals incapable of anger management. Such as this posting by steve-jonathan.

>> Thanks, Anderscum. You never let us down.
>
>His statement is scarcely comprehensible.

It is comprehensible. There seems to be a problem in acceptance. Non-acceptance will appear as "incomprehensible." That's just denial.

>I can piece it together, but it
>sure is an odd way to say that he believes that ARRL is really just a publishing
>house pretending to be a membership services organization.

Incorrect and a failure to comprehend others' viewpoints.

Many perceive the ARRL as trying to be two kinds of organization at once, a "service" organization and a seller of goods to a specific market. The latter "serves" the market it purports to "represent?"

It is perfectly reasonable for others to assume a paid staffer, a manager, has a goodly amount of Loyalty to his employer. That is not lost to the general readers here. It is also perfectly reasonable that employers do not look with favor upon employees, especially those with management responsibility, to negatively criticize them.

The end result is the general readers' perception of bias, of spin in stating certain things about the employer. That perception is no longer "suspicion" but is out in the open. Continuous denial of such biased attitudes does not erase the perception but tends to enforce it.

There is no denial that the ARRL performs a service to its membership. There should be no denial that the ARRL makes a profit on reselling of goods or the sale of advertising space in its membership magazine. It should. The organization must sustain itself somehow. It becomes schizoid to others when the idealistic side is used as a vehicle to support the materialistic side and vice-versa. It becomes confused when both sides of this Janus claim the "only" "official" source of goods and services for "all radio amateurs."

Article two of "The Amateur's Code" demands membership organization loyalty solely to the ARRL. That has been in existance for at least 24 years. That isn't lost to all who have seen the opening pages of the (extra-cost) ARRL Radio Amateur's

Handbook for a quarter century.

While it may be uncomfortable to have such things repeated, it should be noted that ARRL membership remains less than a quarter of all licensed US radio amateurs.* That has remained so for at least a decade.

If the ARRL is so altruistic, so good, so noble as claimed continually in its own publications and official statements as well as claims of its employees, why hasn't the membership increased proportional to licensees?

The public and non-members are able to perceive things about the ARRL which the ARRL cannot. That is not a "fault" of the non-members.

---

* QST is a membership magazine, a monthly periodical. Because it is sold at retail outlets and by subscription to non-voting readers, it must have a public "Publisher's Statement." That statement gives the membership number total (wish some exclusions) as well as the number of printed copies, copies sold at retail outlets, and copies given away or destroyed. The Publisher's Statement is periodically printed in QST and is available on the ARRL website under the sub-pages of advertiser's information.

>> So they are all out to get you!

> Nope. But you sure wish I'd shut up about it.

I don't know, Dick; do you think that I would engage you in conversations about
something I wanted you to shut up about?

>If it's so much more difficult for persons with no technical training to
>learn the material, they will do so and will soon abandon rote memorization
>of word associations. This being true, why so much fuss from you on the
> subject?

Because I don't think it is helpful if some of the experienced hams give
newcomers bad advice.

Do you think it is helpful for experienced hams to give newcomers bad advice?

If you really think that "this being true," why do YOU keep saying that it
easier to use word associations to pass the tests?

>> Are you willing to add a single statement to your advice that tell
>>prospective hams the word association memorization is not the easiest
>>way to pass the ham tests?

> Now you're suggesting I lie about it?

I don't get it; in one paragraph, you say that it is true that rote
memorization is not the easiest way to pass the tests, then you say that you
would be lying about it if you told newcomers that rote memorization is not the
easiest way to pass the tests.

Either way, if you are going to keep advising newcomers to rote memorize
material to pass the tests by telling them that doing so is the easiest way to
do it, then I will offer them my opinion that doing so is not the easiest way
to pass the tests.

>speak for themself.

PART 95 HAS NOTHING TO DO WITH THE DISCUSSION. Robeson should
go to the FCC website and download ANY radio service Part he wishes so
that he can learn what Part 95 contains. For that matter, he could
consult
any old FCC Rules and Regulations set to see that citizens band radio
service was NOT under Part 95 when it was created.

> >>NCI wants to end CODE testing. NCI fully supports retention of
>licensing and theory/regs testing.<<
>

School
>and collegiate students for their mid-terms and finals. We will also
be
>creating a placement service to get these grads into advance degree
programs
>such as med school. Consider that for a moment.

Consider that you are spouting off denigrations and pejorations without
addressing the SUBJECT.

The VEC system has been running for 15 years. The ARRL itself
publishes several radio amateur license study guides. Is the ARRL a
"Dick Bash" clone?

> >>Yes, just memorize 900 questions and answers to become a tech.
>Piece of cake, right?<<
>
> Judging by the growth in the Tech class license and the fact that Maia
>and Gordon seem to be making a good living off of the sale of such
publications,
>I'd say so!

Would Robeson be willing to name the sources and amounts of this alleged
"good living?" How much does the ARRL make from their study guides and
videotapes?

If Robeson does not like the present testing system, he can comment to the FCC. The time is ripe and Robeson is not on the ECFS list. Such Comments must be received by December 15. The clock is ticking.... tick....tick....tick....tick....

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

Now here's one from Avery Fine that was so frigging long, you had to do it in 2 parts. Notice the fact that you as Avery was responding to Kim Kelly who was responding to Leno 21. So, Ken, you, under an ASSumed pseudonym was posting anonymously....

In article <39C00758.7BC211B8@uci.edu>, Jim Kelley <jwkelley@uci.edu> writes:

>Lenof21 wrote:
>> This is a POLICY newsgroup, not a half-assed "schoolroom" where

>Ahhh, so then it must be one where the "instructor" insults and demeans
>everyone else, including the "institution", and the "degree".

Taking a sentence out of context and using it in some sort of reply doesn't make any case except showing your own sensitivity to personally-held, over-exaggerated beliefs and delusions. I'll just have to answer that by a summation of the newsgroup scene and general amateur news content over the last three years. It is in two long parts and not a specific personal reply.

Amateur radio is first and foremost an avocation. It is not an occupation. It is not an emergency service. It is not a ready pool of trained technologists ready to aid the nation as if it is some virtual "minuteman" standing by for battle. It has long since abrogated any semblance to "pioneering the radio art" in the vast arena of the radio world.

snip snip snip (to the last paragraph of part 2) hhmmmmm no signature

By all means, stifle dissent, hold the status quo, raise the drawbridge of the isolated castle. Wrap yourselves in patriotic bunting, sing old, old radio hymns from the ARRL Hymnbook, proclaim only among yourselves that you are the greatest! I really doubt the radio regulators will see it that way. Behavior on the air or on the computer or in correspondence to the FCC is noted for what it is by the regulators. The grant of an amateur radio license does not make an individual "right" in opinions or behavior.

Anyone can call dissent "hate." They can call dissent anything they wish. They just can't call their definition as truth.

I agree....the ham that doesn't know code may, in fact, be far
more qualified as a ham than the ham that does know code...it
all depends on what their respective "other ham skills
and knowledge" are.

Ed:

I don't recall saying that. I'm saying that removing the code test will destroy amateur radio *within* the next 103 years. It could happen tomorrow. I'm just not paying off on the bet until 2105. If Cecil is too impatient to wait that long (assuming we can determine that he won sometime between now and 2105), then he should not have proposed the wager.

Personally, I think I'm going to win -- and am more than willing to wait until 2105 for Cecil to pay me.

Maybe I am a tad lost here Dick. I've only ever operated PSK31 on the proposed frequencies: mostly 80 meters at 3580, 14070 for 20 meters, and 28120 on 10 meters.

While people can transmit at other frequencies, do they? I must admit I've never noticed the psk31 notes in other areas of the band. But perhaps I've just been provincial. 8^)

And as the waterfall display will tell you, there are a fair number of hams whose PSK31 signals are pretty atrocious, overdriving the audio and running too much power, and making it difficult to achieve the BW promise the mode can achieve.

I'll have to check out MixWin

>

Are you sure? Most of the study guides I've seen consist of the questions and the

exact answers, and some don't even include the distracters. I don't know how it's done these days but earlier the answers were even in the same order on the test as they were in the pools.

>
> Trying to rote-memorize the question pools would be much harder than reading
> the supporting material in the study guides.

Of course it would, and also of course I never said anyone memorizes the question pools.
Can you soak that up ED? What they memorize is work associations so they can recognize
and pair answers with questions where they have seen them paired before. Of course

studying the distracters just gets in the way.

>
> You are giving bad advice to newcomers.

How can I be giving advice when I'm merely stating what I see as fact? Why do you fool yourself into believing that this isn't already widely known?

>
> I>If one sets out to learn the technical material he'll have to look well
> >beyond the pool for
> >much
> >of what he needs.
>

> should look beyond the pool to learn what he or she needs to pass the test?

Nope. I'm telling y'all that if one is to actually learn the material with no prior background

most of it won't be learned from the question pools alone. Of course we both know
that
few with no technical background learn the material from the question pools,
anyway.
Don't we?

> If
> so, I agree; this is the easiest and best way to do it.

You sure do keep trying, I have changed my view none whatever, yet you keep
"insisting" that I have.

Oh, I noticed that you ignored my question about how Gordon West trains
newcomers
to pass the Tech exam in a weekend. Gives a money back guarantee, too, I
understand.
Still think they're learning the material?

I'll have to look for others using psk31 at other frequencies than the
well known ones. The nature of the mode tends to concentrate people in a
few, well known sections.

> Take 80 meters - lots of PSK31 around the colorburst freq. If there's a clear

Well, literally, name someone that is NOT affected by amateur radio. Just
because there are people who have never heard of amateur radio, they are
still affected by it--through the very allocation of frequencies provided by
the government, via the public service functions we engage in, etc., right?

> >
> > Must one be a teacher to realize they are underpaid?

I think it is in terms of whether someone should express an opinion on
something they don't "partake" of. Remember, I am not at all impressed with
Len Anderson. I think he's a drone incapable of seeing beyond the nose on
his face. But I am defending that he, or anyone else, is perfectly welcome
to express their opinion on amateur radio and I don't think it's right to
snuff them off just because they aren't licensed.

I agree with your comments on HW traffic. However, you leave out a considerable contribution to the public when you leave out the [probable] hundreds of hours spent each year on weather nets, public service nets (parades, county fairs, etc.); which are all mostly provided via common VHF/UHF communication modes. I think the contrast is in that major disasters are probably fairly well covered by our public agencies. However, the "local stuff" is not and the services provided by the ARS is the backbone of communication for such events.

It may be a CW/no CW issue for some. But it's not for the greater majority.

I guess my answer is that my logs are mine. They don't belong to e-QSL.
I've never put any of my logs online and never will. The logs are still
open for those who need a card from any of my operations and WA8JOC
still has plenty of blank cards. Direct cards with SASE or IRCs will
get a direct response. Others go via bureau. None will be confirmed
electronically.

Not when I'm right. I don't know any DXer who has memorized all of the
band allocations for every country in the world.

I've never operated from the Pacific. Why would I have need of a
Pacific calling frequency. I've worked plenty of 6m DX which wasn't on
any calling frequency. One doesn't get to DXCC on 6m by sitting and
listening to 50.110. One doesn't get to DXCC on 160m by listening to
any one frequency. I have 108 worked (96 confirmed) on 160m and 72
worked (only about 40 confirmed) on 6m. Sometimes dumb luck pays off,
huh?

> > > There's a lot to know if you want to be a DXer.

Oh, we didn't handle any traffic--just the usual exchange of reports and
perhaps a grid square. You were the guy worked up over the issue. In
fact, you were the only guy worked up over the issue.

That only applies to certain people. Dick admits that he has me, Len, and Kim killfiled. He still argues with Cecil, however, and continues to make at least one post per day (on average) in which he calls Cecil a "troll." It makes one think that he actually LIKES arguing with Cecil.

I for one hope that the code will grow in use after the code test has died.
I would love to learn code but it is stupid to have to take a code test
just to be able to "legally" talk to the drunks, nazis, and rednecks on HF.
I'd like to learn it _-ON THE AIR-_ using it not playing with a computer
program of some of MFJ's junk or code quick's "DOG DID IT"!

Did any one here learn to ride a bicycle by listening to tapes?
Or did anyone here have to ride a bicycle or drive an ox cart to
prove to the examiner at the DMV that they should be allowed to use
an automobile? If it was still 1917 then hell yes let's test for
morse code ability, but the last I checked it was 2002. Makes you
wonder if that guy that used to post here had it right,"welcome to
ham radio, set your watch back 40 years"!

All you OF's and PCTA's keep saying that you miss the "good ole days
of ham radio" well guess what, in 40 or so years TODAY will be
the _GOOD OLE DAYS_ of ham radio, code test or no code test!!!

R U SICK YET?

The question pool is less than half of the ARRL License Manual. The Q&A
references sections in the theory material. It is easier to study the
theory material than rote-memorize 1000 Q&A.

> If one sets out to learn the technical material he'll have to look well beyond the pool
for
> much of what he needs.

The License Manual containing the Q&A in the back has most of the theory
material covered in the first part of the book. It would be nice if you
recommended studying the material instead of telling prospective hams
how easy it is to rote-memorize 1000 Q&A.

It's no diversion, Dick. I truly cannot understand how studying for and passing a ham exam can dumb anyone down. And when, exactly, does this dumbing-down occur? Do people who take and fail a ham exam avoid the dumbing-down process?

> Your error is in insisting that when hams don't know Morse code they are just

I think the ARS will be around by the time I am 88 years old (56 more years) I am quite sure. As with anything it may change or take different directions, but it will still be there. Unlike a few people seem to think and want, Amateur Radio will never return to what it is like in the 50's and the rest of the Ward and June Cleaver stereotypes. It will evolve.

I will put 100 bucks on the fact that amateur radio will still be around 2020. May not be identical as it is now but it will still be here. And most of the people will still be alive when that time rolls around. (aside from death from disease, accident etc.)

Think you may have blundered into something here, Cecil. Should be worth
a couple of PhD dissertations at the very least if not the Nobel Prize.

Is bellowing CQ 20 equivalent to turning your cap backwards for IQ loss??
Hmmm. Does wanting to bellow CQ 20 cause the loss or does it take the act
to do it. Are people bellowing CQ 20 victims? Is bellowing CQ 20 a birth
defect?

If the latter, can we call them Cecil's Kids?

Dick, NBK

>> Most hams buy one or more of the study guides and read the material, Dick.

> Are you sure? Most of the study guides I've seen consist of the questions
>and the exact answers, and some don't even include the distracters.

The only study guide that comes close to that is the VIS set. That does indeed try to use word associations to memorize material. This may be the first mention of that publication ever on this newsgroup, showing that most hams do not consider this a good way to learn the material to pass the tests.

Why would hams buy a study guide that includes only the questions and not even the distractors? I think that such a study guide would be about 30 pages long. I know of no study guide that size, do you?
What you said sounds fabricated to me. Can you tell me what study guides are only 30 pages long that represent the "most you have seen?"

>I don't know how it's done these days but earlier the answers were even in the

>same order on the test as they were in the pools.

I don't know how long it has been so, but for as long as I have known anything about the way the ARRL VEC testing is done, the orders of the answer and distractors have been randomized. That is why none of the questions in the pool have "all of the above are correct" as an answer or distractor. The answer or distractor needs to be "all of these answers are correct."

>to pass the Tech exam in a weekend.

I don't read every one of your posts, Dick, but if you will call that
"ignoring," perhaps I need to start. I am sure I could have something to say
about every single one of them, if that will help you not feel ignored.

And your point is what? How many classroom hours does that represent? Lets say
15 hours, just to have a reasonable number. If he were teaching rote
memorization and word assocation, that would give him 3 minutes per question.

Could YOU memorize 300 things on a subject you know nothing about spending 3 minutes per question? I could not.

There are far fewer than 300 basic concepts in the exam pool, Dick, and 15 hours is ample time to cover them. I teach a course on RFI that takes 5 hours. That is a pretty complex subject, yet in those 5 hours, we are able to cover it in detail. I have taken professional 1- or 2-day courses that get into FAR more detail on a subject than necessary to pass a Tech exam. And how long would it have taken me to study for that Novice license I took back in 1963?

More examples, the ARRL educational courses cover a subject in great detail in about 15 to 20 hours of studying. Need more examples, or do you get the point now?

>Still think they're learning the material?

It is really funny. You act like memorizing 26 characters, 10 numbers, 4 punctuations and a few prosigns is a major effort, but seem to think that one cannot learn material in 15 hours of classroom teaching and that using word association to memorize 300 questions without understanding is trivial.

It just doesn't add up.

writes:

>N2EY wrote:
>
>> >> So we should penalize the narrow modes by allowing them less space?
>
> When you put it like that!.....

It really comes down to a question of how we allocate a limited resource, and
what basis is used for that allocation. CW and narrowband digital signals like
PSK31 and PACTOR can fit several QSOs to the kHz while analog voice modes
need a couple of kHz to the QSO. But voice is more poplular. Where to put
the dividing line, or even if a dividing line is needed, is a subjective
decision.
>
> I'm not actually suggesting anything, as I don't support anything
>beside what is used today, space wise (do you have the percentage at
>present?)

It varies by band, but typically on the HF hambands it's about 50% 'phone and
50% CW/digital. 160 is wide open to all modes, 30 has no phone at all but it's
only 50 kHz wide and 10 meters is about 85% 'phone.

Complicating the whole mess is the question of digital voice. Is it a data
signal or
a voice signal? Seems to me the logical dividing line is the necessary
bandwidth.

>few, well known sections.

Also the nature of equipment used. The Warbler and other Small Wonder rigs
cause natural centers of activity. But PSK31 activity is not limited by law to

just those freqs. You can go 500 or 1000 Hz up or down and if the freq is not in use, jump in. But your chances of an answer are diminished because the folks running those little rigs cannot hear you.

I think it's important to have a bit of knowledge of how we got where we are today. Sometimes the reasons for doing something no longer exist, while other times the reasons are still valid. Often the reasons for doing something are all but forgotten, and are rediscovered the hard way.

That reminds me, gotta get Part 3 posted....

I am sure that the degree to which what I say is seen as "spin" varies from reader to reader. Some actually believe that I say what I actually believe.

>That perception is no
>longer "suspicion" but is out in the open.

To others, there will always be suspicion. To others yet, a need to create such suscpicion...

>There should be no denial that the ARRL makes a
>profit on reselling of goods or the sale of advertising space in its
>membership magazine.

As long as one also "doesn't deny" that ARRL has no stockholders to reap the benefit of that profit. The policy-setting arm of the ARRL, its Board of Directors and the non-corporate officers, by policy do not get to keep a dime of that profit.

> It becomes schizoid to others when the idealistic

It might be a place for you to *listen,* but no, you're right, just keep bumbling along. Or you might still be in the "I'm the DX" mode and expect them to find you. It might take you some more time on the noisy side of the pileup to figure that one out.

I've worked plenty of 6m DX which wasn't on

Lemme see. 108 on 160m and 72 on 6m. That's a total of 180 QSOs at (a generous) 60 seconds each. In the public schools that works out to three hours of being "busy working new ones," over about two years back in America.

You need a strategy.

Hah! That's good.

Prices should get back to normal after the boomers die off. They're at
their peak earning years, the market has been good to them, and everything
is at a premium because there are so many dollars out there.

But of course, I'm a boomer too, and I've got to pay the price if I want a
piece of it. When I leave it to my kids it won't be worth a wooden nickel.

Ho Hum, just another one of Riley's meaningless letters that
he cranks out by the dozens with no intention of ever following
up on. Oh yes, here and there we can point to some follow up,
but overall, especially in some high-profile cases, Riley slinks
away with no follow up once the perp stands up to Riley and
won't be bullied by the little FCC geek. Oh yes, certain people
definitely will feel Riley's sting, but these are individuals Riley
has singled out for a vendetta and that Riley knows have limited
resources or contacts to fight him with. It's no secret that
Riley is not about to hold a series of FCC hearings to discipline
hams. Riley has been instructed by his bosses that this will not
happen. A few suspensions here and there and an endless stream
of stupid letters, that's the thrust of Riley's much vaunted
"enforcement" activities. What a joke! Meanwhile, some of the
highest profile violators in ham radio history continue on with
impunity. All of us could name at least one high-profile violator
who is still operating on the air to this day, with impunity and no
fear of little Riley. In the city where I am, we have a mental
case who should have had his license revoked years ago. Riley
cranked out the usual pile of letters to him, then forgot about the
guy. What a joke! The guy continues to this day violating FCC
rules and regulations with no fear of Riley or the FCC. Like I said
though, another guy might break a few rules and whamo, Riley will
pull the guy's ticket for the remainder of its term, but other guys can
break whatever rules they choose, with no fear of Riley or the FCC.
Riley is the best and worst case of Selective Enforcement there has
ever been! I have no respect for the man any more. Of course,
Riley could care less what I think of him. Riley goes on, knowing
that his fat taxpayer-provided pay check will be there waiting for him
every two weeks, followed by a generous federal retirement in a few
years. Riley's legacy will be nothing, nada, zip. Just another federal
bureaucrat who has ripped off the people who provide his pay check!

10-4 Good Buddy!

I surprised that someone hasn't written a book that gives complete
instructions for memorizing 1000 Q&A. Memory experts such as Tony Buzan have
been doing this for years. I wonder how well such a book would sell.

Hello, all!

I'm a geezer (52) who has finally decided to take
the plunge into amateur radio. Back in the 1960s
I took a test to get on commercial radio. I had to
get to Kansas City (90 miles away) and take the
thing at an FCC office. Question pool? I don't
THINK so! That was a relatively easy test (Third-
Class Radiotelephone) and I passed it fine. But,
I was SWEATING BULLETS before-hand because
it was a PAIN just to take the thing, and failure would
have been awful, for a lot of reasons.

THAT was TESTING!

Quite frankly, I am shocked that I will have access
to the questions and answers on the tests that I
will take over the next month or two. I have some
technical background, which helps, but I got a couple
of those books from Radio Shack, and, er, ah, there
are the questions AND answers, right there!

Somehow, it seems like cheating, at least to me!

Are people simply memorizing the pool? They
HAVE to be, MANY of them! To believe otherwise
is just silly. I'm a college-level instructor and, hey,
my students would KILL for the questions and
answers! Why, if they had them they'd come to
my lectures only out of courtesy, and because I
do a good job, usually!

Val Germann
Columbia, Missouri

If you'd love to learn it, go right ahead!

I can't recall ever running into any "drunks, nazis, and rednecks" on CW/Morse,
though.

> I'd like to learn it _-ON THE AIR-_ using it not playing with a computer
> program of some of MFJ's junk or code quick's "DOG DID IT"!

I learned code "on the air" by listening to other hams and W1AW. You can do the same.
>
> Did any one here learn to ride a bicycle by listening to tapes?

Not the same thing, or even similar.

> Or did anyone here have to ride a bicycle or drive an ox cart to
> prove to the examiner at the DMV that they should be allowed to use
> an automobile?

Not the same thing or even similar.

Try this one:

"Do you have to demonstrate stick-shift skill to pass a driver's license exam?"

That one makes a lot more sense and is a better analogy.

> If it was still 1917 then hell yes let's test for
> morse code ability, but the last I checked it was 2002.

Morse was widely used by other services for many years after 1917.
Still widely used by hams.

> Makes you
> wonder if that guy that used to post here had it right,"welcome to
> ham radio, set your watch back 40 years"!

He had it wrong.

All that's left of code testing is the 5 wpm test, and that's because the FCC won't violate the treaty provision that requires a code test. That treaty provision will probably (some folks say VERY probably) disappear in 2003. Then it will be simply a matter of govt. processing time to delete the test from the requirements.

Maybe we oughta have a pool on how long it takes the FCC to drop Element 1 after S25.5 goes away...

> widening the 'phone bands. Don't you see the contradiction
> between saying that it's OK to have a setaside for narrowband
> modes but not OK to have a setaside for CW?

From a purely technical standpoint, yes. From a practical,
political standpoint, however, I realize that the history here
in the US would make it a VERY contentious subject, were
anyone to suggest that "SSB (all modes, in fact) be allowed
everywhere" ... I see no sense in stiring the pot on that one
because 1) it's not practical 2) it's not critically important,
and 3) it would be VERY devisive in the ham community at
a time when that sort of division would be a very bad thing.

However, I DO see a BIG difference between having
roughly 1/2 the bands allowing SBB/SSTV/etc. (wider band
modes) and the other 1/2 being restricted to narrower band
modes (CW/xxTOR/Clover/PSK31,RTTY,etc.) and your
proposal that would take 35% of the bands for CW ONLY
and force the future of ham radio into the remaining 15%.

>Or the contradiction
> that you want the users of the most popular HF/MF mode (for hams)
> to get only about half the band, and their crowding enforced by law,
> but scream and cuss because I only proposed 15% for digital?

The reality of the situation is that, left to itself, SSB would probably
over-run the HF bands to the virtual exclusion of other modes.
Keeping it restricted to the upper part does 2 things.
1) It forces some semblance of cooperative sharing and operating
efficiently on the users of SSB.
2) It assures that the CW folks and the digital folks have a reasonable
amount of spectrum to work in. (Sharing between the CW folks and
the digital folks also needs to be cooperative ... without any "I own
this part of the band exclusively" attitudes, in the interest of efficient
use of our spectrum, both now, and as usage patterns inevitably change
in the future.)
To artificially and arbitrarily allot 35% to CW ONLY and only 15%
to all of the other digital modes would be unwise, unfair, and counter

to our future best interests.
Since there is no good reason why CW and digital users cannot share
the lower 50%, there is no good justification for "hard-coding" boundaries
for usage by the various narrowband modes.

> >> >You just want to stifle the growth of digital modes because you

>
> You have already said 25 kHz CW only would be OK.

That 25 kHz was ALWAYS a "token gesture of good faith,"
don't try to expand it in an "ask for an inch, take a mile" sort
of maneuver ...

> Maybe a CW-only section is a workable idea, maybe not. Maybe a different
> percentage or a fixed number of kHz is a better way. Maybe there's no real
need
> for it.

I would assert in the strongest terms possible that:
1) A CW-onloy segment is NOT needed
2) Such a setaside would be bad spectrum management
3) Such a setaside would be bad public policy
4) Such a setaside would UNNECESSARILY limit the use of
spectrum long into the future, resulting in in efficienct use of
our spectrum and ultimately necessitating avoidable rules change
moves in the future as usage patterns changes

You're absolutely right, I haven't seen any of his stuff, only his 'cram school'
advertising which said "do it in a weekend". So now you will insist that anyone
can learn it all in a
weekend. Right.

No wonder Cecil's IQ is sky high. It was all that rote memorizing as a kid
for his
ham licenses, then even more for his EE. Fantastic! Maybe there's a good use
for it, after all.

Most of mine is on 20, but the point was that when using DIGIPAN or one of its clones (MIXwin uses it) one sees the entire 2400 hz passband while a single signal is normally less]
than 50 hz wide, unless overmodulated as you noted. That overmodulation is another problem that isn't always easily resolved since you can't monitor your own signal without a scope set up to monitor the RF out of your transmitter, and most hams don't have one. Best way to set up the transmitter is to start a transmission with no audio input and slowly
increase the audio level until the transmitter output comes up to the point that it stops increasing, then reduce it slightly. (The details depend on your setup and transmitter).
Some adjustments are made to the computer sound card, others to the rig, depending, again, on the equipment. I always ask how my signal is, and always tell another station if he is overdriving his rig. Some avoid saying so, but that's the only way most people will know.

>
> While people can transmit at other frequencies, do they? I must admit
> I've never noticed the psk31 notes in other areas of the band. But
> perhaps I've just been provincial. 8^)

You'll see it scattered out a little, but it is concentrated near the "standard" frequencies.
With MIXwin you're not restricted to a single mode per software load and that makes it a lot more fun since you can jump from one mode to any of the others on the spur of the moment. I personally like the Hellschreiber mode really well, and using the waterfall display on the other modes is revealing and educational as well. You learn by visual comparison which modes are working well under weak signal conditions, by
varying your receiver RF gain you see how noise level and signal to noise ratio can play into the workings of the various modes. For instance on RTTY you can take a pretty weak signal that isn't copyable with the RF gain up, since the noise is being amplified to the point that it is causing 'hits' on the RTTY copy, then slightly reduce the RF gain so that the noise on the waterfall display drops (the noise level is visible as
white background on the display. You turn the RF gain down carefully so that the white just
disappears leaving only the visible signal on the blue background) and the RTTY print will

clear up. Makes learning
to carefully adjust the receiver for optimal reception easy. The waterfall
display works better for me these days than relying on hearing the difference!

>
>
> And as the waterfall display will tell you, there are a fair number of
> hams whose PSK31 signals are pretty atrocious, overdriving the audio and

Yep, that's easy to spot and easy to correct, but one has to know his equipment and what to do with it.

>
> I'll have to check out MixWin

It has become my favorite, though there are some others that I haven't tried.
Make sure you download version 2.03, there are still some older versions out there for download that don't have all the functionality that 2.03 has. Google search will show you where to download it, also the K4SET website has some info.

Val, I hate to have to be the one to break the news to you, but you
might as well get ready for major changes in the way you do things in
academia. When ARRL's Ed Hare finally gets the word out about
how question pools do a really fine job of qualifying all testees, your
present method is sure to fall.

In any event, from one Missourian to another, welcome to ham radio.
I hope you find it as interesting and as much fun as I have.

Dick Carroll, W0EX

You're presenting your opinions of what others want, filtered through
your own likes and dislikes. Based on reading practically all of your
posts here for at least 4-1/2 years, I really have a hard time
believing that you would present Morse/CW in ANY sort of positive light
to anyone.

It's like having the chairman of PETA as spokesperson for fur coats and
premium beef.

They are opinion questions, and the answers are subjective. In fact the
whole question of what belongs on the ham tests is an opinion question,
except perhaps for the most basic regs and safety issues.

My point in posing those questions
is to show that one doesn't have to use terms like "SO
bogus it's ridiculous" to get the opinion across.

A person uses what talents and skills he has to achieve the goal, Dick.
Mother Nature blessed me with a high IQ and a photographic memory for
numbers and graphs. I cannot take credit for those talents but I sure
did put them to good use in my life including gaining all amateur
frequency privileges when I was 14 years old. It didn't occur to me
at the time that there was additional material available besides
the ARRL License Manual. I was intelligent but very, very naive.

You must have misunderstood. I didn't work any of 'em from the public
schools. Oh....you didn't think that's all I've done with my time back
in the U.S., did you?

> You need a strategy.

I have a really good one: They shows up. I works 'em.

The one thing they are making more of is people. People generate demand
and demand increases prices. I don't see land getting any cheaper.
>
> But of course, I'm a boomer too, and I've got to pay the price if I want a

Hello, all!

Some guy who goes by "CAM" scrawled, confusedly:

>Valentine Germann wrote:
>
>Dick, is that you in disguise? Or your uncle there in
>Missouri?

See the problem? This guy can't even follow UseNetiqette
and render proper attribution. That is, I did NOT write,
"Dick, is that you in Disguise? Or you uncle there in Missouri."
For one thing, I can construct complete sentences.

Now, I ** DID ** write the following sentence, in reference
to AMATEUR RADIO pool question TESTING:

>> Somehow, it seems like cheating, at least to me!

In a misguided response to the sentence above, this guy
"CAM" mewled:

>If so, people also cheat to get their pilot's license and
>driver's license.

But you see, I wasn't talking about those things. I was
talking about AMATEUR RADIO. And, er, ah, isn't it true
that you have to take other tests, not just a pool test, before
you can get your pilot's license or driver's license? I think
that's so, and it's a wise precaution, since pilots in the skies
with just a pool written test behind them would soon crater this
fair land with crashing airplanes from coast to coast and
sea to shining sea. As for what such testing would bring to
the roads of America, particularly where the CDL is con-
cerned, well, I dare not even THINK about THAT!

Then, this guy "CAM" spewed again, in response to this
statement of mine:

>> Are people simply memorizing the pool? They
>> HAVE to be, MANY of them!

That is, this guy "CAM" wrote:

>Try memorizing the definitions of 1000 Russian words and
>then get back to us.

I have to admit it, here I am at a loss to understand. The
AMATEUR RADIO tests are in ENGLISH, at least they are
in the books that I have bought. Also, there are three groups
of them which can be taken a section at a time. Now, I know
it might be hard for a third-rate intellect such as "CAM" to
believe, but it's going to be NO PROBLEM for me, if I want
to, to NAIL those tests based strictly on the books. That is,
this guy "CAM" may think that to be a mental feat beyond belief
but, trust me on this one, even college students could do it!

Cheers to you, too!

Val Germann
Columbia, Missouri
well, he's wrong.

Dave,

If you'd bother to read anything I say, rather than just immediately
criticizing because it was me who said it, you'd know that I said
something like "I could support ... 25 kHz ..."

I never said "the frequency segements were under my control."

You are so driven to criticize anything I say that you make a fool
of yourself by going off on things where you don't even know what
it was that I said.

I wanted to point out that I think this is pretty neat. When I first
started occasionally paying attention to this group, one of the early
exchanges I followed was W1RFI asking W0EX questions about the operation
of a spectrum analyzer, with W0EX protesting that spectrum analyzers weren't
something that a ham, as opposed to a professional, would need to know about.
Now, while I'm paying attention again a few years later, I see W0EX explaining
how to do useful things with what is essentially a spectrum analyzer.

There's probably a lesson in there that I can't put my finger on about
how inaccurate impressions of people derived solely from Usenet discussions
can be, but it is certainly clear that one shouldn't underestimate the
ability of even old dogs to muster enough enthusiasm to learn new tricks.
I'm impressed.

>Why must someone be a radio amateur to comment and have opinion on amateur
>radio, Dave? That doesn't make sense at all.

Sure it does. It makes all the sense in the world. Lennie the Loser has
NO experience (beyond the theoretical) from which to address matters pertaining
to Amateur radio policy or practice.

NONE.

>Must one be in the medical
>insurance industry before an opinion can be made that medical insurance
>fails most people miserably and has made a mockery of the true nature of
>being a doctor?

First of all, with the exception of those names on the Social Register or
Fortune 500's folkest-with-the-mostest, name me someone in America who is NOT
affected by insurance matters.

> Must one be a teacher to realize they are underpaid?

Or a nurse, or a chauffer, or a gardner, or a....But none of that's
germane to discussing Amateur radio practice or policy, now is it?

>Len may be totally off-base.

"May" be...?!?! He openly lies and misleads, harrasses and antagonizes.
There's no "may" to it...!!!

>I am surprised you spend time
>reading his posts; they all say the same thing.

Yes. They are insulting and demeaning. But that does not mean that they
should not be blunted by countering comments. We have seen the results of The
Big Lie that was allowed to go unchallenged.

>However, that he is not a
>licensed amateur radio operator has nothing to do with it.

They have EVERYTHING to do with it, Kim. He has absolutely NO background
(beyond the theoretical) upon which to make his opinions and assertions. His
practical experience in Amateur radio is Zero-point-Zero minutes of Amateur
Radio time.

Shannon Faulkner has more military training than Lennie has in Amateur Radio. His numerous anti-ham rants have all been disproven or laid bare for what they are....mean, antagonistic bile for which there is NO excuse save pure meaness.

Until he either ceases his verbal carnage of his own volition or he strokes out, he will get that which he doles out.

Brian, I'd really like for you to explain how you managed to pull that bit of wisdom out from your otherwise dusty and ill-fitting hat.

CW on either of the frequencies he cited is legal, and nothing he stated was improper. Perhaps a bit of DX-envy?

Steve, K4YZ

Psssssttt Dennis, don't tell him it is a spectrum analyzer. He'll never use
it again, damn it to hell, and re-protest to the world that amateurs don't
need spectrum analyzers.

Of course, it was absurd. Otherwise, I never would have asked that
tongue-in-cheek rhetorical question. I think it was Larry's idea for
hams to have to feel a certain way but I might be wrong about that.

It is your newsreader that is screwing up, not mine. The author's
name is at one level of nesting below his postings. You, sir,
just forged an attribution and that is certainly against netnews
rules. You should be reported to your ISP for that violation.

> >If so, people also cheat to get their pilot's license and

Aha Dick, it is you. Come on, don't deny it. You have subscribed
to one of the direct news servers, like I did except I have the
balls to post my real name.

> >Try memorizing the definitions of 1000 Russian words and

Don't play stupid. If it is easy to memorize the Q&A for 1000
English amateur questions, then it should be no problem to
memorize 1000 definitions for Russians words. Let us know
whan you have accomplished that trivial task.

>>manager, has a goodly amount of Loyalty to his employer.
>
>That is why I choose to work at ARRL, Len; I believe that the work I do there
>is important.

That's almost a macro compared to what you have written before.

Define the "that." Did you choose to work there on the basis of loyalty? For pay? For title? Are those the only reasons?

I did not define my quoted sentence as pertaining to specifically Ed Hare.

The quoted sentence was written to show that personal bias towards an employer is common to most employees reasonably or well-satisfied with their job. Are you in disagreement with this immediately-preceding sentence?

>>The end result is the general readers' perception of bias, of spin in
>>stating certain things about the employer.
>
>I am sure that the degree to which what I say is seen as "spin" varies from
>reader to reader. Some actually believe that I say what I actually believe.

My original post concerned the ARRL as a whole and its continued spin output over the last half-century. In this newsgroup Ed Hare presumed this was some sort of direct inferrence on his newsgroup writings and became defensive. The connection of group-to-personal is an indication of personal involvement and probable bias.

>To others, there will always be suspicion. To others yet, a need to create
>such suscpicion...

Such suspicion is not unfounded. It seems there is always a single apologist for the ARRL present in this newsgroup with a managerial title.

I'm rather sure that all readers are familiar with an oft-quoted phrase "I did not have sex with that woman." That was spoken by a President of the United States, a title somewhat higher than anything bestowable by the ARRL.

To believe one and not the other indicates a very personal bias.

>>There should be no denial that the ARRL makes a
>>profit on reselling of goods or the sale of advertising space in its
>>membership magazine.
>
>As long as one also "doesn't deny" that ARRL has no stockholders to reap the
>benefit of that profit. The policy-setting arm of the ARRL, its Board of
>Directors and the non-corporate officers, by policy do not get to keep a dime
>of that profit.

None that is reported. What about the paid employees? Do they also
receive minimum wages? Minimum employee benefits?

What about the travel, food, and lodging reimbursements? Are there
any for all those out-of-NE board meetings? Are those meeting room
charges obtained gratis?

What are the billing charges for professional legal representation
in DC? Are those for free?

Why does the ARRL ask for more money for certain activities from
time to time?

>There is no materialistic side, Len. All of those profits are used to fund
>the actions of the "idealistic" side.

How is that so "idealistic" when the ARRL attempts to control/influence
government on certain regulations when there is NO credible
confirmation that the membership actually approves of the "board's"
decisions? The only "confirmation" of the ARRL's actions comes from
the ARRL itself.

Why does the ARRL demand more money for goods sold directly
relative to the same goods sold at retail outlets?

>>It becomes confused when both sides of this Janus
>>claim the "only" "official" source of goods and services for "all
>>radio amateurs."
>
>If that is what you believe, I agree; it has become confused.

I acknowledge agreement on this one point.

>>Article two of "The Amateur's Code" demands membership
>>organization loyalty solely to the ARRL.
>
>"Solely?" Not in my handbook, nor is there any mention of that in the ARRL
>employee handbook, either.

Direct quote from my 1978 "The Radio Amateur's Handbook," sub-
titled "The Standard Manual of Amateur Radio Communication." -

"TWO
The Amateur is Loyal . . . He offers his loyalty, encour-

agement and support to his fellow radio amateurs, his local
club and to the American Radio Relay League, through
which amateur radio is represented."

Some time after that Paul Segal's 1928 original was revised. In
the 1999 CD-ROM version that article had become:

"LOYAL...offers loyalty, encouragement and support to other amateurs,
local clubs, and the American Radio Relay League, through which
Amateur Radio in the United States is represented nationally and
internationally."

Solely to ONE membership organization, the ARRL. All anyone
can quibble about is "club" which is not defined nor detailed. The
ARRL is rather explicitly self-defined, isn't it?

>>The public and non-members are able to perceive things about
>>the ARRL which the ARRL cannot. That is not a "fault" of the
>>non-members.
>
>We are so lucky to have all-seeing Len to show us the light. :-)

Are "we" also lucky to have a paid manager and employee of the
ARRL to show "us" another light?

ARRL membership is still less than a quarter of all licensed US
radio amateurs.

Heh. Refusal or inability to adapt killed the dinosaurs... :-)

There's a lot of raptor-wannabees buzzing around in here demanding
a "return with us now to the days of yesterday"* in everything from
jargon, procedure, testing (1930s) to technical arts (1950s) and the
ever-present public service jingoism of "ready for any emergency"
(since the Titanic disaster of 1912). They seem to be unable to
think outside of the box prepared for them by even-older long-timers.

Amateur radio has, by evidence, always been about RECREATION
involving radio. Individual recreation. The hungry raptor-wannabees
keep insisting that all, newcomers or oldcomers, should enjoy the
hobby their way...that all should hunt bravely for sustenance "for the
good of the community" as if they were some paragon of virtue in
their own very personal preference activities. They bring nothing to
the table, no food, only great volumes of hot air. Exhortations of
nobility, of service, of dedication, etc., etc., etc. are filling but have
no real nutritional value.

"Recreation" seems to be a pejorative. Our nation has a great
number of national parks maintained for the enjoyment and
recreation of its citizens and quite a few foreign tourists. Millions
of dollars are spent by governments to maintain them yet such
parks and preserves return nothing direct except enjoyment of
nature. Many of these parks and preserves take up land that
could be used for other purposes. Going to a park or preserve
for enjoyment does not make anyone an expert ecologist,
botanist, or land-history-historian...recreationists don't return
anything directly insofar as "a service to their country" or "being
ready for emergencies." They just enjoy themselves IN nature.

The EM spectrum is also a part of nature. As a whole but it is
divided up, regulated, allocated, very much used by different radio
services. Here and there are little parks and preserves in the
spectrum which are open for recreation and enjoyment. Some of

those parks are allocated to radio amateurs, others are open to anyone.

Some radio amateurs tenaciously fight for "their land" as if they owned it, preserved it, even invented it. They wish to force all to obey them and their associates to meet their terms of entry and occupation, maintaining rigid order and discipline within their ranks as if it were a military service. All must do things their way "for the good of the service." They erect barriers, fly banners, exhort their Way Of Life as the "only way" yet they own nothing of that ephemeral spectrum.

The evolution of radio has been on-going for 106 years and the public has been allowed into many of the recreation places in the EM spectrum...from CB to model radio control to FRS to various appliances that make life easier, more enjoyable. The Academy of Model Aeronautics has never attempted any jingoism of model hobbyists being any great "pool of aeronautical techniques for the nation" or anything else than a hobby. But the AMA membership is on par with that of the ARRL. AMA members just enjoy their hobby without pretense of grandeur, have fun in many diverse ways, don't propagandize within themselves about their great importance to the nation or their community. But, modelers have succeeded in getting reserved EM spectrum "park space" just for their hobby purposes, for enjoyment, for recreation. In later years despite the AMA being established in 1936 well before most of these newsgroupies were born.

Some of the raptors in the radio amateur "community" demand a rigid adherence to standards and tradition established before they were born, a temporal allegience to a bygone era that also existed before their life experience began. That's odd, almost perverse, that they so treasure and adore the archaic that they demand all those who began life well after they did to follow their examples, of retaining testing and a guild-unionism within a "tradecraft" that is a hobby in a constantly-evolving technology. Why? It only satisfies the little raptors' hunger for size and importance. They do not grow bigger, only meaner and more spiteful.

Another revolution in radio began quietly about 1991. The SDR or Software Defined Radio technology. Defined, not just controlled by software. The first such complete SDRs appeared in 2001. The possibilities of a fantastic advance of radio technology are as good now as the dawning of the solid-state era of the 1960s. The "ecology" of radio is once more changing, evolving. The little raptors cannot see this, do not want to see it. Fixated in ancient technology, they remain inflexible, locked into a narrowband world of half-century-old standards and practices.

I personally cannot see this love for a half century ago. I was there as an adult then and grew out of it. Nostalgia is fine, a trip back in time to remember the good times with contemporaries

who were there too. Fixed, legislated nostalgia is wrong, and that is what makes up too much of US radio amateur regulations, standards, and practices...unless the definitions of amateur radio are changed.

The little raptors snarl and object to the "ARS" defined as Archaic Radiotelegraphy Service. Yet that is what they champion. They wonder why no one appreciates their glory and majesty and noble presence when they are only two inches tall, enthroned on molehills in a land of mountains. :-)

Krell talked about the technology of walking and bicycling in
a disparaging way, because they are old and basic means of transportation.

The comparison is a poor one. Much better is Bill Sohl's question of
"is stick-shift skill necessary for a driver's license?"

> neither
> is there anything wrong with Morse usage (by choice),

Agreed!

> S25.5, for now)

Obviously your opinion, and also the FCC's. They made it clear
they don't want code testing, but their hands are tied as long
as S25.5 stays as it is.

That ended in the mid-1970s.

The old Class A/Advanced had a one-year experience requirement. When the Extra was (re)created in 1951, it had a two-year expereience requirement, which was reduced to one year about 1974 and eliminated entirely about 1976. (See my posts in another thread for exact dates).

> The premise was, IMHO, that there is learning that comes from being an
> active ham that is not necessarily going to show up in a written exam.

Yup - also a bit of maturity. But since there is no activity requirement, the license could sit unused for that time, too.

> That
> premise is valid, but the difficulty of having a VE system keep track of it
> makes it an unworkable good idea.

What difficulty? All that would be required is for the ham who wants to upgrade to present a copy of his/her current license. Which has to be done anyway to get credit for elements already taken. No need for VEs to keep any records or other stuff - just check the issue date on the existing license.

> It is probably also an unnecessary good idea.

Most of the world has a tiny ham population, spread very thin. Many
other countries with significant ham populations have subbands.

> >However, given the history here in the US it's probably not
> >a politically practical option ... though it could result in better
> >spectrum utilization from a technical/analytical standpoint.

I sure hope so.

I see a contradiction, though. On the one hand, Carl wants analog 'phone/image
subbands to remain as they are, to keep space open for digital modes.
In other words, digital modes need protection from 'phone encroachment.
But the idea of CW getting the same sort of protection from digital by
means of a subband is unacceptable to him. Double standard? Maybe,
maybe not. But it does seem odd that the digital modes are seen to deserve
"protection" but CW doesn't.

Yes, CW can be used anywhere on the amateur HF/MF bands (unless you count the
special Alaska freq), but in practice the routine use of CW in the 'phone
bands is rare and frowned upon.

>(since the Titanic disaster of 1912).

Led, however incapably, by His Licenselessness, Lennie The Lost. Lost in time, that is, as he repeatedly retells the story of the 1.2 million messages that HE transmitted or relayed from an Army communications outpost in backwater Asia in the post Korean War days.

>They seem to be unable to
>think outside of the box prepared for them by even-older long-timers.

At least it beats the (colostomy) bag that you seem to have YOUR head in, Your Foolishness. And your wife kisses that face? Whew!

>Amateur radio has, by evidence, always been about RECREATION
>involving radio.

And again Leonard H. Anderson, a "person" who neither holds licensure in nor participates directly with Amateur Radio, tries to tell us what Amateur Radio is or does.

No expericence = UN-informed opinion....silly at best.

>Some radio amateurs tenaciously fight for "their land" as if they
>owned it, preserved it, even invented it. They wish to force all to
>obey them and their associates to meet their terms of entry and
>occupation, maintaining rigid order and discipline within their

Witness the foregoing.

>All must do things their
>way "for the good of the service." They erect barriers, fly banners,
>exhort their Way Of Life as the "only way" yet they own nothing
>of that ephemeral spectrum.

And this. If it were any more rediculous, we'd have people dying from terminal laughter. The problem is that creeps like Lennie the Lizard can keep repeating this trash over and over and SOMEONE, with a similar LACK of experience or knowledge base in that of which he speaks, may come to think it

has some merit.

It doesn't, save for in the minds of the timid, the weak or the foolish.

>The Academy
>of Model Aeronautics has never attempted any jingoism of model
>hobbyists being any great "pool of aeronautical techniques for the
>nation" or anything else than a hobby.

Lennie has yet to answer the challenge put to him to make good on his claims of organizations of similar size/intent to the ARRL being as proactive in their administration or lobbying efforts to protect thier interests.

However Lennie DOES like to make reference to them as if model aircraft flying has any relevence to Amateur Radio. The only common interest is the use by modellers of some portion of the electromagnetic spectum to control thier models. Very specific channels using very specific techniques and very limited power.

Thier needs are addresed in Part 95 of the Federal Communications Commissions' Rules and Regulations, no part of which places any responsibility upon the user to meet certain expectations of the Commission nor of the public.

Part 97, however DOES place certain expectations on the Amateur Radio SERVICE, one of which is providing emergency communications.

Lennie, despite reams of evidence to the contrary, insists otherwise.

This is what a lack of experience or knowledge base does for you.

>But the AMA membership is on par with that of the ARRL.

Facts, please...?!?!

>AMA members just enjoy their
>hobby without pretense of grandeur, have fun in many diverse
>ways, don't propagandize within themselves about their great
>importance to the nation or their community.

Lennie's true reason for being an antagonistic twit is evident herein...Lennie can't stand it that "amateurs", unpaid, self-taught and LICENSED radio operator volunteers, DO have a "great importance" to thier nation, whether he cares to like it or not.

It is a fact. It has been attested to by federal and private organizations and agencies alike. Too bad for Lennie.

> ....don't propagandize within themselves about their great
>importance to the nation or their community.

Maybe when AMA members start flying models in support of disaster relief? Use their models as homing pigeons? Use them ala-MASH evacuations?

>Some of the raptors in the radio amateur "community" demand a
>rigid adherence to standards and tradition established before they

>were born......

Please quote the demands, Your Foolishness...names...specific quotes..?!?!

>They do not grow bigger, only meaner and more spiteful.

Yes, you do, Lennie.

>I personally cannot see this love for a half century ago. I was
>there as an adult then and grew out of it. Nostalgia is fine, a
>trip back in time to remember the good times with contemporaries
>who were there too.

You've grown out of nothing. You still whine and cry over things that you
don't understand or cannot master. You are given knowledge and skills, but do
nothing with either.

THAT is a loser.

>Fixed, legislated nostalgia is wrong, and that
>is what makes up too much of US radio amateur regulations,
>standards, and practices...unless the definitions of amateur radio
>are changed.

You would LIKE for the "definitions" of Amatuer Radio to be different.
Then perhaps you could mold it into your rants.

Amateur Radio continues to be viable, dynamic and of great value to both
the individual and the nation. That you choose to be it's single most vile
antagonist does not negate any of that.

Sorry if the facts don't fit your rants.

>The little raptors snarl and object to the "ARS" defined as
>Archaic Radiotelegraphy Service. Yet that is what they champion.

Keep reciting this in public, Lennie. You only further your own
foolishness. It is, afterall, a great lie.

>They wonder why no one appreciates their glory and majesty
>and noble presence when they are only two inches tall, enthroned
>on molehills in a land of mountains

"We" have no such wonderment, Lennie. Glory and majesty are not
adjectives that are applicable, but that "we" are appreciated is but one of the
numerous reasons why Amateur Radio thrives today, as much as that galls you.

Troll-on my wayward Son, there'll be peace when your troll is done. Lay
your lying mouth to rest, Don't you cry no more.

With SINCERE apologies to "KANSAS".

Steve

No. I simply observed that hams have feelings, and think different ways
about things, and you came up with your brilliant idea in response.

It's been suggested several times here and elsewhere. Some folks
interpret the phrase "free market of modes" to mean no
subbands-by-mode.

> I see no sense in stiring the pot on that one
> because 1) it's not practical 2) it's not critically important,
> and 3) it would be VERY devisive in the ham community at

Some folks (not me!) say that limiting the spectrum available to the
most popular HF/MF mode (SSB) is divisive.
>
> However, I DO see a BIG difference between having

Of course there's a big difference.
>
> >Or the contradiction

> over-run the HF bands to the virtual exclusion of other modes.

Hmmmm - in previous posts you wrote that most of the world has no mode restrictions and didn't seem to have any problems, but now you seem to have changed your mind.

I agree that having no mode restrictions would probably result in lots of
SSB and AM voice all over the place.

> Keeping it restricted to the upper part does 2 things.
> 1) It forces some semblance of cooperative sharing and operating
> efficiently on the users of SSB.
> 2) It assures that the CW folks and the digital folks have a reasonable
> amount of spectrum to work in.

Agreed on both points, to an extent. There are still battles between AM and
SSB folks.

There are at least two other effects:

3) The crowding of the 'phone bands acts as an incentive for hams to use
other modes, such as PACTOR, PSK31 or CW, that are more spectrum-efficient and
are allowed where 'phone is not. In other words, "welfare for nonvoice modes" ;-)

4) A precedent is set to allocate spectrum space by criteria other than popularity of a mode.

>(Sharing between the CW folks and
> the digital folks also needs to be cooperative ... without any "I own
> this part of the band exclusively" attitudes, in the interest of efficient
> use of our spectrum, both now, and as usage patterns inevitably change
> in the future.)

Sure. And if that could be guaranteed, there's no problem. But one of the
problems of having a growing number of digital modes and no code test is the
inability of their users to inter-communicate. The PSK31 user cannot understand the PACTOR user that is trying to say "the frequency is in use" unless the PSK31
user is also equipped with PACTOR. And vice versa. Same for CW vs other modes.

> To artificially and arbitrarily allot 35% to CW ONLY and only 15%
> to all of the other digital modes would be unwise, unfair, and counter
> to our future best interests.

Unfair to whom? How many hams are using all these modes, that 15%
isn't enough?

Consider FD 2001. The number of CW QSOs reported was MUCH greater than
the number of digital QSOs reported, even though digital QSOs score
the same and
digital is a separate "band" for FD. QST and the other ham mags have
been
shouting the praises of PSK31 and other digital modes in practically
every
issue for years, yet they have not achieved even the usage of CW.

> Since there is no good reason why CW and digital users cannot share
> the lower 50%, there is no good justification for "hard-coding" boundaries

> of maneuver ...

It's called negotiating, Carl. Gotta allow some negotiating room.

It could be said that the "token" of 25 kHz is a "land grab" for
digital.
I can see it now: "Don't come up above 7026 - you've got exclusive
spectrum
below 7025!"
>
> > Maybe a CW-only section is a workable idea, maybe not. Maybe a different

>
> I would assert in the strongest terms possible that:
> 1) A CW-onloy segment is NOT needed
> 2) Such a setaside would be bad spectrum management
> 3) Such a setaside would be bad public policy
> 4) Such a setaside would UNNECESSARILY limit the use of
> spectrum long into the future, resulting in in efficienct use of
> our spectrum and ultimately necessitating avoidable rules change
> moves in the future as usage patterns changes

The only reasons I've seen supporting all the above are based on
assumptions:

1) It's assumed that digital and CW need and deserve protection from
'phone,
but CW does not need nor deserve protection from digital.
2) It's assumed that the future of amateur radio HF is digital modes
and that
usage of those modes will rapidly expand in the future.
3) It's assumed that if spectrum needs change in the future, the rules
cannot
be changed quickly enough to accomodate them.

--

However, we may both be out in the cold on this one. I would not be
surprised
if our objections to 'phone band expansion are ignored by the FCC and
the
'phone subbands are widened in the near future, as proposed by the
ARRL BoD.
This will push the foreign 'phones still lower in the band to get away
from stateside QRM, and afford even less space for CW and digital. If
the use of
'phone HF by US hams increases dramatically in the future, the
pressure to
widen the 'phone bands still more may carry the day against objections
from
both digital and CW users.

I keep hearing that, but I don't buy it ... there is NO reason that
anyone needs to be able to COPY Morse to be able to tell
that it's there and avoid transmitting on top of it ... any more
than a Morse op needs to be able to copy PSK31 or RTTY
in his head to be able to tell the signal is there and avoid it.

I think you're grasping at straws ..

They have probably been stung by some people getting defensive about
it. I always thank someone for a signal report, especially if it is not
a good one. But one helpful ham from Colorado one night helped me tune
my soundcard and rig for a good signal.

Ahh! Thanks for that bit of advice, Dick. No one locally that I know of
uses RTTY, and I've been messing with it a bit with MMTTY without
success. I'll try this and see how it works. I'll do the search and
download MixWin too.

> maybe not. But it does seem odd that the digital modes are seen to deserve
> "protection" but CW doesn't.

Jim, you twist what I say to make it sound like I "want to protect digital
modes from SSB, but not Morse." That's not true ... I am suggesting
that, by leaving the separation between wide and narrow bandwidth
modes as it is, SSB will not over-run either Morse or the other digital
modes ... which can all share dynamically in what is left over outside
of the "phone bands" ... no need for a separate setaside for Morse
only ... let alone anything like the 35% of the bands that you suggested,
Jim ...

Let's face it ... SSB voice is by far the most popular mode on HF.
But, it's over 50 years old and I'd hate to see it over-run the digital
bands to the degree that it inhibits the growth of the new modes
that are the future of ham radio.

CW and (other) digital modes (digital INCLUDES Morse) can
coexist better with each other than they could if the whole works
was over-run with SSB. Again, no need for a Morse only setaside,
let the usage patterns determine things as the traffic offered changes.

Too darned many people don't "get it" that we share our frequencies
with each other and want to "stake out their 'own' turf" and defend it
against others, even though they only USE it a small part of the time.

The FCC has decided that 5wpm is sufficient for the extra class license. And the FCC decides what the requirements are for a ham license. Besides, how many hobbies require a government license anyway? Maybe general aviation pilots, scuba divers, hunting, and other dangerous activities. But no license is needed for
stamp collecting, chess playing, antique collecting and such. Why should the FCC be in the business of handing out gold stars?

^^^^^^^^^^

But the FCC is the organization that decides what is necessary. They decided
that
20wpm is no longer necessary. So an "extra-lite" (I'm one) still has the
necessary
skills and knowledge to pass the tests as given.

Here you are, Lenny. Another person who would appear to agree with you:

http://www.dirtball.com/code.html

He changed the second article. Still attibutes it to the original writer tho'.

Interesting how different people interpret the same thing:

"LOYAL...offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally."

Whereas you read it as loyalty to the ARRL, I read it as support to the ARRL. A different thing entirely. And I do know enough of history to understand the contex within which it was written, in 1928.

I guess to be perfectly honest, I've got a lot less faith in the
ability/willingness of US hams to behave as reasonably as
our counterparts from other countries do in the sort of "here
are the band edges, you guys behave yourselves" sort of
environment that they are USED to operating in ...

It is TRUE that most of the world has no sub-band by mode
restrictions and that it HASN'T caused any real problems.

> I agree that having no mode restrictions would probably result in lots
> of SSB and AM voice all over the place.

That's because of cultural differences, IMHO ... in other cultures,
there is a much greater spirit of cooperation and desire for
harmony ... in our culture, unfortunately, too many people are
"just out for themselves" and want to "stake out their turf and
defend it" rather than sharing equitably.

> > Keeping it restricted to the upper part does 2 things.
> > 1) It forces some semblance of cooperative sharing and operating

The "turf wars" phenomenon I referred to ... I think it's rather
uniquely a US phenomenon. (Mixed blessing ... unfortunate
that it's so predominant and we're to blame for it, fortunate
that it's not like that throughout the world's ham population.)

I see it as sort of the ham radio equivalent of the classical
"ugly American" tourist ....

> There are at least two other effects:
>
> 3) The crowding of the 'phone bands acts as an incentive for hams to
> use
> other modes, such as PACTOR, PSK31 or CW, that are more
> spectrum-efficient and
> are allowed where 'phone is not. In other words, "welfare for nonvoice
> modes" ;-)

Give me a break ... WHAT "crowding on the 'phone bands" ???

Even last weekend with the DX contest, I was able to find space
to operate in the phone bands without any real problem ... I was
NOT "forced to retreat to where SSB was not allowed" ...
"welfare for nonvoice modes" ??? ROTFLMAO!

It's not that the phone bands are so crowded that they can't
support more users ... the PROBLEM is that too many folks
want "their own frequency" (to stake out, protect, and not
share reasonably with others ...) THAT is why I think that US
hams would spread SSB throughout the lower parts of the
bands if allowed to do so ... THAT is why I don't support
"phone band expansion."

> 4) A precedent is set to allocate spectrum space by criteria other

> user is also equipped with PACTOR. And vice versa. Same for CW vs
> other modes.

DECENT implementations of any digital mode would allow users
to detect the presence of users of other modes (including CW)
and avoid them.

Period, end of story, no excuses.

The idea that one must be able to copy Morse to be able to
avoid it is about as inaccurate as to say that one must be
able to speak Spanish in order to recognize that a Spanish-

speaking person is speaking to someone else in a public
place and to avoid interrupting him. One doesn't have to
understand WHAT he's saying, just that he's speaking, in
order to wait until he's finished and avoid rudly interrupting him.

> > > You have already said 25 kHz CW only would be OK.

> digital.

ROTFLMAO!!!!!!!!!! All digital modes, including CW, are
presently on an equal footing ... how could you POSSIBLY
construe a "give-away" of 25 kHz of EXCLUSIVE CW
spectrum as "a 'land grab' for digital"??? THAT's REALLY
funny!!!

> However, we may both be out in the cold on this one. I would not be

Some people say that 5wpm is essentially "no-code". And the FCC
itself observed that since restructuring there has been no increase in
bad behavior on HF. The 14.313 and such were all 13wpm and higher
licensees because that mess existed before restructuring. So CW as a
lid filter doesn't work.... Oh, I'm sure there was a fair amount of
"newby" errors made by newly minted general and extra "lites" (I had
my share) but that doesn't make them lids unless they don't learn and
correct the bad operating. And it's the oldtimers who realize that and
also the newbys who also realize that they may need to learn correct
ways to operate and accept the corrections gladly. This has existed
even when newly minted 13wpm generals and advanceds and 20wpm
extra upgrades from tech or even novice first got on HF. It happens when
new HF ops realize that it is entirely possible to interfere with other ops

on the same freq that he cannot himself hear. Like the guy with the
kilowatt
QRMing a distant QSO using 100w rigs he can't hear.

This thread has revolved around emergencies where the ham is hanging by the rig on a belt or keyboard on a belt playing Batman or flunky to some Emergency Management type. And now and again these things do happen. But the major PREDICTABLE contribution of the ARS to these things has been Health and Welfare traffic, freeing the locals to do what needs doing while getting a message to Aunt Matilda. They also serve who shuffle paper.

Perhaps the clearest example was some years ago in Guatemala where an earthquake did a number on the country and there were not enough functioning hams in the country to do much and they had better things to do. The Red Cross did the report taking and shipped replies and paper into New Orleans on Pan Am where the local volunteers matched it and put it out on the National Traffic System, a mostly CW caper.

The fact that it was done in CW is not so interesting as the fact that it was done within an existing organization of ops and an existing structure of nets to handle it. This thing could have been done in packet, PSK31, RTTY, or nearly anything known to man; it was not the mode but the people who did it in an organized, disciplined manner that earned everyone's amazement. And yes, there are lo-speed nets. And, via the word count, a

form of error correction even. All in a day's work.

Whatever one may think of digital modes, SSB or whatever, the 'infrastructure' to use a buzzword simply does not now exist on any mode but CW. If you tried it on SSB some dangling hemorrhoid would QRM the net and the digital people would have some pissing contest about legacy modes for months after the need passed into history.

Seems that until the noCoders can handle the predictable case, bleating about the unpredictable ones is simple prattle.

>
>Whereas you read it as loyalty to the ARRL, I read it as support to the
>ARRL. A different thing entirely. And I do know enough of history to
>understand the contex within which it was written, in 1928.

The editors and phrasemakers at the ARRL are very good at what
they do. If they had meant "support" they would have reworded
article two. Article two still has "LOYAL" in full caps as its first
word. If you wish to "read it" as "support" then you are charged
with inability to fully comprehend written English words.

As to the reworded article two, "representing [US amateur radio]
internationally," let me remind you that the ARRL opposed the
rewording of S25.5 by the IARU to be brought up at WRC-03.

Does the ARRL support any unlicensed-in-the-amateur-radio-
service individual? No. Should it? Doesn't have to. Yet the
ARRL has consistently opposed dropping all morse code testing
for an amateur radio license. That affects all who might be
interested but not yet licensed. The ARRL has thus tried to
exercise minority control on just GETTING INTO amateur radio.
The ARRL does NOT represent "amateur radio" anywhere
except for already-licensed amateurs who are voting members.

Since the membership of the ARRL is less than a quarter of all
licensed US radio amateurs, that rather implicitly and without
doubt spells out clearly minority control. As a US citizen, born
in the MidWest, and a veteran, I'm not too keen about a minority
controlling whatever I do and then saying they "represent my
interests." Am I supposed to vow LOYALTY to a minority just

because they make a lot of claims?

"Loyalty" means being faithful to one's country, friends, ideals.
"Supporters" give jock itch.

Would you like a reminder of 1994 and the Northridge Earthquake
that affected at least ten million? Regardless of what you may
think (or snarl), that took place within the United States.

The only evidence of any amateur radio volunteerism came long after
the fact. It seems to have gone unobserved by the few millions IN
the affected area.

The operative word there being "opposed", ie: past tense.

>Does the ARRL support any unlicensed-in-the-amateur-radio-
>service individual? No. Should it? Doesn't have to.

Then why the following rant:

>Yet the ARRL has consistently opposed dropping all morse code testing
>for an amateur radio license.

Hmmmmm....COULD it be because the ARRL >>IS<< a "membership" organization,
and until recently, it was the concensus of that membership that the ARRL
oppose such changes?

Is that not the way of representitive organizations, that they REPRESENT
the views of thier members in an organized voice?

>The ARRL has thus tried to
>exercise minority control on just GETTING INTO amateur radio.

No, Your Lyingness, they didn't. They represented the MAJORITY opinions
of thier members.

League membership has never been resricted to any Amateur. All have been
able to join and subsequently voice thier opinions at the various board
meetings and elections.

Unlike the "Silent Majority" tactic of the early 70's, the League
represents the VOTING majority.

Unless YOU have FACTS to present that prove otherwise?

>As a US citizen, born
>in the MidWest, and a veteran, I'm not too keen about a minority
>controlling whatever I do and then saying they "represent my
>interests."

There you go with that geopolitical bigotry thing again. What's being
from the midwest have to do with anything? That's supposed to impress us?

And guess what, Lennie..?!?! If the ARRL folded up it's tents tomorrow, you'd STILL be "controlled" by a monority.

>"Loyalty" means being faithful to one's country, friends, ideals.

And what would you know of any of that?

>"Supporters" give jock itch.

Maybe yours does, Lennie, but I launder mine on a regular basis and it's never given me a moment's problem.

Perhaps if you tried a bit of topically applied Monistat?

Steve

Dennis, I remember that conversation a bit differently, though I may be wrong. I
thought I
said that a spectrum analyzer was something that few hams would be likely to have
available
for use in the shack, and surely most would not know much about them. And the other
ham was WA4STJ, wasn't it?
I happen to have been the exception since I used one at work and also have
a couple old ones in my shop at home.
But in reality, for operation on the HF ham bands, the waterfall display is much
more useful,
in my opinion.

Why Cecil..... In the pic on the Qrz.com site for your callsign, you look like a healthly looking individual! :) I would guess around the age of the young 50's. If there is any persons I would actually like to meet from these various newsgroups, you are one of about the top 10 people I respect from here and other ham newsgroups.

Keep healthy my friend, I will be doing some traveling in the next 5 years and would thoroughly enjoy a chat with you over coffee when I do make it to TX.

I don't see the ARRL controlling what is happening here and other newsgroups where ARRL discussion (for and against) occurs. Why would they automatically have that right? As far as corporations and organizations, there is plenty of other newgroups discussing the corporations and organizations and I don't see the corporations "controlling" those newsgroups. Or is the reason why you want the ARRL to control an ARRL newsgroup tied to some form restriction of the freedom of speech? I just thought the newsgroup idea would be nice for people on both sides of the fence. (for and against)

Ryan

You should add that the premise of those who say that people are memorizing
1000 questions and correct answers is that they do so with no understanding.
Your Russian analogy is intended to present an example where memorizing would
occur without understanding.

The best response I have seen to date is that the Russian premise is
ridiculous. :-)

>can learn it all in a
>weekend. Right.

Right. The amount of material that one has to learn to pass the Tech exam has always been learnable in a weekend.

This is really funny. You insist that people can't learn enough to pass the tests after 15 hours of classroom study, but that they can memorize 300 questions with less than 3 minutes per question available, but that they can't memorize 26 letters, 10 numbers, 4 punctuations and prosigns without a lot of work.

Right.

Dick, those 300 questions are interelated, so what is not possible -- rote memorization -- is possible if one spends time on the learning behind those questions.

>article two.

Do you think they are good enough at what they do to have said "unconditionally loyal" or "obedient?" Do you think they were good enough at what they do that they intended to use the words encouragement and support to expand on what they meant by the term "loyal?" Do you think they intended anything when they put such loyalty to other amateurs and local radio clubs first.

Do you still think the intent of the point in the code of conduct is to be loyal "solely" to ARRL?

Is this another one of those "what was said, what was heard" sort of things?

>As to the reworded article two, "representing [US amateur radio]
>internationally," let me remind you that the ARRL opposed the
>rewording of S25.5 by the IARU to be brought up at WRC-03.

ARRL has a policy decision that it will not oppose changes that would remove Morse code testing as an international treaty requirement.

Is this another one of those "what was said, what was heard" sort of things?

>ARRL has consistently opposed dropping all morse code testing
>for an amateur radio license.

ARRL has a policy decision that it will not oppose changes that would remove Morse code testing as an international treaty requirement.

Is this another one of those "what was said, what was heard" sort of things?

>As a US citizen, born
>in the MidWest, and a veteran, I'm not too keen about a minority
>controlling whatever I do and then saying they "represent my
>interests."

The ARRL does not control what you do, Len, at least not anywhere other than in your imagination. The FCC sets the requirements for Amateur Radio licenses. ARRL has done no more than make its views known to the FCC. You always rail at ARRL and amateur operators for somehow denying you that right, but you appear to be saying that ARRL's making its views known to the FCC somehow controls you.

Is this another one of those "do as I say, not do as I do" sort of things?

> Am I supposed to vow LOYALTY to a minority just
>because they make a lot of claims?

You do not have to take such a vow, Len, even to become a ham, or even - gasp - to become an ARRL member.

The "control" exists only in your mind, or in the spin you want to try to make other hams believe. :-)

> "Loyalty" means being faithful to one's country, friends, ideals.

According to you, if ARRL asks ham to be loyal, it means being in control.

Perhaps this is one of those what you said, what you heard yourself say sort of things. :-)

I don't really agree with that statement. If propagation on 40 mtrs drops out, we should then
plan on automatically changing bands to 75? That opens up a whole set of problems.

In a hurricane setting, chances are that atmospheric static levels will be far too high on 75
for it to be useful at all. Then there's the different antenna requirement. You surely don't
plan to work 75 on a 40 meter antenna. When faced with that set of circumstances, I believe I'd hold the band that's working at them moment and change modes.

If you've ever changed bands under those circumstances, you'll understand. I have.

What usually happens is the two stations lose each other, and wind up back on the same frequency trying to make a dying circuit work, absent better previous planning.

Lets make it very clear here. No one is suggesting the use of CW in emergencies as
anything other than a backup mode. *of course* it's much better to use the most efficient mode available, and one would hope that in an emergency he would have something better than either CW or SSB. But too often circumstances dictate the mode.

And you, sir, should stick to what is written instead of modifying it to meet
your need
to criticize. You *are* becoming more like Cecil. That's really too bad.

This really IS funny! You insist that the material to pass a ham radio exam can
be
absorbed and learned in two settings, and that the word associations needed to
pass the same tests can't be. WRONG. Dick Bash must be laughing his ass off.

On the contrary, Dick, it is definitely not pointless. If you do it, you will win the argument. Why are you not willing to spend what you say is a trivial amount of time performing what you say is a trivial task in order to win a big victory in the argument? The only reason I can think of is that you are not telling the truth when you state that memorizing 1000 Q&A is a trivial task.

> Ed Hare, W1RFI

An EXCELLENT point, Ed!!!

In fact, with the propagation prediction software available,
(I use PropMan2000 from Rockwell Collins ... $99) it is
possible to predict the best frequency quite accurately.

The software even goes to the internet to download the
latest space weather and other factors so that the prediction
is truly as accurate and up to the minute as possible.

Another thing which would be very useful for disaster
and emergency communications ... and also for routine
skeds to talk with friends (but would obviously not apply
to or appeal to DX chasers and contesters) is the potential
of using ALE "Automatic Link Establishment" software.

This is used, for example, on commercial and military
circuits where link reliability is or great interest. With
today's computer-controllable radios, I believe it would
be quite feasible for someone to write ALE software
for amateur use ...

(Yes, someone will grumble "That's not REAL HAM
RADIO!", but my point is that for emergency and
disaster communications, "making it work" is the
name of the game, NOT "following tradition.")

> should then
> plan on automatically changing bands to 75? That opens up a whole set of problems.

That's the way Intel had their emergency communications organized, Dick. Changing frequencies is a lot easier than changing modes, especially if all the operators are not practiced and prepared for their brand of CW traffic. For instance, Intel didn't have a straight key and, at the time, I couldn't handle the paddles.

> If you've ever changed bands under those circumstances, you'll understand. I have.

Intel iEARS practices emergency communications once a week, Dick. They have a calling schedule which dictates changing bands until communications is established. Then if communications fades, they go back to the original band rotation until communications are again established.

> What usually happens is the two stations lose each other, and wind up back on the
> same frequency trying to make a dying circuit work, absent better previous
> planning.

Why would they be absent better previous planning? To make CW more attractive? Once again, it seems you are advocating a lack of planning and preparation in order to push your agenda.

Ed,

I recognize, and agree wholeheartedly with, your statement that
voice is not limited to SSB and that there is plenty of need for
amateur experimentation and innovation on the HF voice bands,
too.

My only concern is that, since
1) SSB is "the norm" for voice,
2) people tend to "use what they have," and
3) given the apparent reuctance of "the masses"
to readily accept and adopt new things
that SSB would "spread out" to a degree that it
would impair the use of the HF bands by other modes.
(including CW, other narrowband digital modes, and
yet-to-be-developed modes) in ways that would be
harmful to the development of "the next generation"
of amateur radio technologies.

Hello, again, "CAM"!

I've been monitoring this newsgroup off and on
for more than a year. Now, I understand that good
amateur practice is to LISTEN first before you
transmit. So, I've been listening for quite a while
and only decided to "transmit" here after I committed
totally to getting a license.

I'm in the book, the phone book, and can be
easily found, using that marvel, "Information."
For a few cents you could call me and verify
everything.

As for my writing style, it's my own, and if it's similiar
to Mr. Carroll's well, c'est la vie. Like I say, I've been
"listening" for quite a while.

Finally, I think that almost ANYONE looking to get
a ham license these days is using the questions and
answers to ease the job. I am firmly opposed to
such practice but I would be a FOOL not to take
advantage of what is freely offered. That is, no
matter what I think about things the object is to PASS
THE TEST -- ANY student will tell you that.

If the object of the whole process was for the student
to LEARN SOMETHING, well, those Radio Shack
books would certainly look different, in my view! If
I gave out the questions and answers to MY tests, in
advance, well, . . . let's not go there!

Val Germann
Columbia, Missouri

That's why this newsgroup was created. Policies, such as morse code testing, closed repeaters, antenna restrictions, etc., as well as what the ARRL is up to are all debated here. I don't see a large enough volume of messages that would require the ARRL to have a separate newsgroup. Stuff would probably get cross-posted anyway.

I'm sure Dick meant the test was dumbed down, not the person taking it.

For my own read on the situation, the test is just different, not necessarily dumbed down. Althought the Morse code was the hardest part for me, it wasn't for some other people I know who aced the Morse code element, and failed the other elements.

That's where I have trouble with the idea that the Morse Code is what elevates the testing to some smarter status.

655. Reciprocal license for Mexico

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-07 17:31:09 UTC
From: Diveman <diveman61@NOSPAMattbi.com>
Message-ID: <xtNh8.17662$aP6.18839@rwcrnsc54>
Source record: 36648
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.policy

Hello everyone,

Just want to bring up an idea I have & perhaps some of you follks can help me out with it. I'm planning a trip to Cozumel, Mexico this May and would like to bring along my Icom 706 to do some operating while I'm down there. What is the best way for me to obtain a reciprocal licence for Mexico? I have read the info on the ARRL site and found that many have obtained their permit at the nearest state capital after arrival. For Cozumel, that would require a trip to the city of Chetumal on the Quintana Roo mainland. (long bus/boat ride or expensive plane trip) On the other hand, I also read on the ARRL site that licences for island operation can only be obtained in Mexico City. All in all this is seems quite impractical and confusing.

I've been to Cozumel several times and the scuba diving is world class, food is great, prices are very reasonable, wonderfull people, I love it there. To be able to operate my rig and work some DX from this great locale would be icing on the cake for a great trip!

Anyone have any experience in doing something like this in mexico? Is it possible to obtain the permit before leaving home? Would love to hear suggestions, advice, or anything that might help. Thanks very much,

M Perry

Of course not - it supports code testing ;-)

> there is NO reason that
> anyone needs to be able to COPY Morse to be able to tell
> that it's there and avoid transmitting on top of it ...

What constitutes "on top of"?

Example 1:

CW operator A hears Operator B's S4 PSK31 signal on 3578.000 kHz. The
books all say PSK31 only needs 50-100 Hz of bandwidth, etc., etc., and
A knows this. r A's rig is equipped with good xtal filters and high
dynamic range, so he tunes off about 500 Hz and can no longer hear any
trace of the PSK31 signal. 3577.500 is clear but A asks if the
frequency is clear in standard fashion and gets no response, so he
blasts away with a CQ.

What A doesn't know and cannot know is that B is using the typical
soundcard-and-SSB rig implementation of PSK31, and B's rig inhales
about 3 kHz of the band at once. A also doesn't know that his signal
is S9+ at Operator B's location, because B is using QRP and an attic
dipole.

A's signal takes over B's AGC (which B cannot defeat because B's rig
doesn't
have an AGC off switch) and makes a mess of B's copy. C, who is in QSO
with
B, thinks "those "#$%^&@ CW lid is intentionally QRMing!" - which is

NOT
the case at all. But B and C can neither tell A what is going on nor
even identify him.

How far away from each digital signal must a CW station stay to avoid
such
problems?

The scenario could be reversed. But I suspect your response would be
something
like "tough - the CW station should use a 'better' mode" or some such.
;-)

> any more
> than a Morse op needs to be able to copy PSK31 or RTTY
> in his head to be able to tell the signal is there and avoid it.

NO reason? I disagree!

Example 2:

D listens on a frequency and hears nothing. Is that sufficient to
avoid
interference? Maybe, maybe not. Suppose the frequency is in use by E
and F, but F is inaudible at D's location and vice versa. But D and E
can hear each other S9++. If D simply starts transmitting without
asking if the frequency is in use, he clobbers E and F's QSO. How does
E let D know the frequency is in use
if D does ask, if they cannot communicate?

> I think you're grasping at straws ..

Nope. One of the most fundamental reasons for radio regulations is the
avoidance
of interference. Hardly a "straw".

Well, if the people entering the amateur radio service are not dumbed down, what does it matter? You see, Dick is trying to have his cake and eat it too. If the new hams are not dumbed down, then the ARS is not being dumbed down. If the ARS is being dumbed down, then the new hams are being dumbed down. Inescapable logical conclusion: If Dick is right, taking an amateur radio exam dumbs people down and to avoid being dumbed down, people should avoid taking amateur radio exams. Dick clearly believes that if everyone avoids taking an amateur radio exam, then the ARS will not be dumbed down. Does that hint something about sandboxes?

Interesting, if I seem to not fully comprehend written English words,
then I would have to say that you not only comprehend them, but are
capable of extrapolating immense, profound and deep meanings from them.
If you believe in the law of averages, then I have been shortchanged in
my English comprehension due to your extra abilities!

How does ARRL punish the Amateur who does not offer their loyalty? You
referred to it as:

>Article two of "The Amateur's Code" demands membership
>organization loyalty solely to the ARRL.

in an earlier post. I must confess that I don't see the words demand in
there, nor do I see any mention of membership either.

> Does the ARRL support any unlicensed-in-the-amateur-radio-
> service individual? No. Should it? Doesn't have to. Yet the

> except for already-licensed amateurs who are voting members.

I look at it the same as voting in our countries elections. If I want to vote, I have to be a citizen, of proper voting age, and all the other qualifications as agreed upon.

If you want to have an effect on what is happening, then get involved, and exercise your rights. Your argument here sounds like the people who whine about politicians, but don't vote. If you want to change the ARRL, Join and vote.

We are talking about a hobby here, and it is amazing that Amateurs even have a powerful organization like the ARRL to lobby for them. What other choices do you have for ARS representation. If you want to change it Lennie, join, get involved, and vote!

> Since the membership of the ARRL is less than a quarter of all

> in the MidWest, and a veteran, I'm not too keen about a minority
> controlling whatever I do and then saying they "represent my
> interests." Am I supposed to vow LOYALTY to a minority just
> because they make a lot of claims?

Hold on a second, Lennie. maybe you can help me with my comprehension here. That article 2 which still has LOYAL in full caps used the word offers, and here you replaced offers with the word "vow"

Vow:
Etymology: Middle English owe, from Old French vow, from Latin votum, from neuter of votus, past participle of vovEre to vow; akin to Greek euchesthai to pray, vow, Sanskrit vAghat sacrificer
Date: 14th century : a solemn promise or assertion; specifically : one by which a person is bound to an act, service, or condition

Essentially the modern definition is the solemn promise or assertion, specifically one by which a person is bound.... well the rest is already up there.

Offer:

1 a : to present as an act of worship or devotion : SACRIFICE b : to utter (as a prayer) in
devotion
2 a : to present for acceptance or rejection : TENDER <was offered a job> b : to present in order to satisfy a requirement <candidates for degrees may offer French as one of their foreign languages>

3 a : PROPOSE, SUGGEST <offer a solution to a problem> b : to declare one's readiness or willingness <offered to help me>
4 a : to try or begin to exert : PUT UP <offered stubborn resistance> b : THREATEN <offered to strike him with his cane>
5 : to make available : AFFORD; especially : to place (merchandise) on sale
6 : to present in performance or exhibition
7 : to propose as payment : BID intransitive senses
8 : archaic : to make an attempt

9 : to present itself
10 : to make a proposal (as of marriage)

I'm assuming that you don't interpret offer as Number 1, Probably our nation, the ARRL isn't suggesting that they be worshiped or offered sacrifices.

2. Probably not, although ARRL does offer various things to us in this definition.

3. This one makes some sense

4. I doubt it.

5. No

6. No

7. No

8. Only possibly, but I doubt the ARRL would use archaic terms like that

9. Could be, but a bit awkward

10. No

So whereas the most likely use of the word "Offers" would be to declare ones readiness or willingness to give loyalty to these other amateurs, radio clubs, and the ARRL (which to me sounds like a very good idea) you use the word vow which I can only interpret as the person must make a solemn promise or assertion; specifically : one by which a person is bound to an act, service, or condition.

Perhaps you could explain in terms that challenged people like myself can understand. 8^)

Agreed. If changing frequencies can improve circuit conditions, the
frequencies are available at the stations involved, that's a
good move.
>
> In fact, with the propagation prediction software available,

Actually, the tradition is to make it work.

The problem is having all of this stuff available and working when needed, with people who know how to use it.

>>rewording of S25.5 by the IARU to be brought up at WRC-03.
>
>ARRL has a policy decision that it will not oppose changes that would remove
>Morse code testing as an international treaty requirement.

Since very recently. The ARRL has been in existance since 1914.
That is 88 years of existance. The ARRL has been OPPOSED to
morse code test removal up to and including 1998 at which time
the IARU reached a consensus view on removal of that test; the
ARRL remained in opposition and announced so publicly. That is
a period of 84 years since founding.

The ARRL announced a policy shift LAST YEAR that "it will not
oppose removal of the code test." Last year was 87 years since
founding.

The recent policy statement is rather boilerplate as far as political
wording goes. The ARRL has simply given up on the code test
issue around ITU-R S25.5 along with implications that it will not
oppose FCC removal of the code test. Null statement. No opposition,
no stance, neutral. No fighting. Concession. Tacit admission of
defeat. Non-musical (no violins).

I'll have to give the ARRL back-room boys a round of applause on
recognizing the future. FINALLY.

>Is this another one of those "what was said, what was heard" sort of things?

Is this another ARRL-apologist's spins to misdirect the subject?

>ARRL has a policy decision that it will not oppose changes that would remove
>Morse code testing as an international treaty requirement.

The meaning of that policy statement has been explained to
you. That policy statement was made last year. It DID NOT
APPLY prior to that year.

>Is this another one of those "what was said, what was heard" sort of things?

Is this another ARRL-apologist's spins to misdirect the subject?

>The ARRL does not control what you do, Len, at least not anywhere other than
>in your imagination. The FCC sets the requirements for Amateur Radio
licenses.
>ARRL has done no more than make its views known to the FCC.

For at least seven decades the ARRL has presumed to be the
"only" representative of the US radio amateur to federal radio
regulatory agencies. That is NOT "imagination." It is recorded
fact.

Up to FCC 90-53 the ARRL had been OPPOSED to a code-test-free
license class. That is NOT "imagination." It is recorded fact.

Up to FCC 99-412 the ARRL had been OPPOSED to eliminating all
but one code test rate for an amateur radio license having below-30-
MHz privileges. That is NOT "imagination." It is recorded fact.

Up to the end of the year 2000 the ARRL had been OPPOSED to
the elimination of the ITU-R amateur code test. That is NOT
"imagination." It is recorded fact.

>You always rail at
>ARRL and amateur operators for somehow denying you that right, but you appear
>to be saying that ARRL's making its views known to the FCC somehow controls
>you.

False attributions, all of them.

I've only mentioned ONE radio amateur's ATTEMPT to deny my
constitutional rights to petition my government. That is NOT
"imagination." It is recorded fact. [see Comments on 98-143 for
25 January 1999, it is on public record]

Why do you insist on so many false attributions as correct?

Why do you deny that the ARRL has had a strong influence
on the government regarding amateur radio regulations?

Are you saying that First Amendment rights "do not apply" when
it comes to amateur radio regulations?

If so, why? Please indicate the US Constitution articles or
amendments which permit such exclusion. What are they?

>Is this another one of those "do as I say, not do as I do" sort of things?

Is this another ARRL-apoligist's spins to attempt misdirection
or ridicule?

>Perhaps this is one of those what you said, what you heard yourself say sort
>of things. :-)

Is this another ARRL-apoligist's spins to attempt misdirection
or ridicule?

>loyal" or "obedient?" Do you think they were good enough at what they do that
>they intended to use the words encouragement and support to expand on what they
>meant by the term "loyal?"

I'll just repeat what was written. If "support" were intended, the phrase makers would
have reworded that article. The rewritten article two as of 1999 still contains the word
"LOYAL" in full caps as the first word.

It is fairly obvious and not really a good argument that what the ARRL rewrote from
the 1928 original and the original being an implicit statement of national organization loyalty ONLY to the ARRL.

We could quibble endlessly over the phrasing with Ed Hare "replying" solely by questions and myself patiently explaining the basics of phrasemaking as used by wordsmiths in all fields. That's counterproductive, produces nothing since the
meaning is quite obvious.

>Do you think they intended anything when they put
>such loyalty to other amateurs and local radio clubs first.

I've already said that the ARRL phrasemakers are good. I will add that they are
not foolish, either.

Let me give you an old example of loyalty phrasing that's been unofficial and around a very long time. The USMC has in internal loyalty phrase/oath/etc.:

"For Corps, God, and country"

There's nothing wrong with the phrase. The order of the wording can be questioned. The fictitious example, probably seen by many is from the

motion picture, "A Few Good Men," primarily a military courtroom drama. That phrase's word ordering is challenged by the defense attorney who drives home one of the central points of the emotional loading to emphasize espirit de corps carried almost beyond reasonable limits.

Those who haven't been in any military service will disregard it, those who are "USMC forever" will be furious and outraged that it is brought up at all. It is nonetheless an emotionally-loaded phrase with a specific order of words that implicitly puts the "Corps" ahead of "God" with "country" last.

As a phrase by itself it can be subject to quibbling on word useage. As an emotionally-loaded phrase for an organization whose primary mission is to destroy (kill) an enemy it fulfills its purpose very well. The mission of any military is exremely harsh...put succinctly it is "kill or be killed." Emotional
support is necessary to maintain espirit de corps in such an environment.

I've used an extreme analogue in phrasings. The order of precedent of words in article two of "The Amateur's Code" is common sense, logical even in a lightly emotionally-loaded phrase. That leaves the last loyalty object, that of
the ARRL.

There is NO qualifier of any kind as to the national-international organization "which represents amateur radio." It is SOLELY that of the ARRL. Succint. No shading or implication of any other national or international organization.

>Do you still think the intent of the point in the code of conduct is to be
>loyal "solely" to ARRL?

Absolutely. This has been explained to you.

>Is this another one of those "what was said, what was heard" sort of things?

No. "The Amateur's Code" article two is quite specific in stating where and to whom a (radio) amateur's loyalty should belong.

Failure to accept the obvious, the long-repeated phrase indicates either an extreme loyalty to the ARRL or a simple failure to read and comprehend English words, phrases, statements, or meanings.

For some reports of actual experimentation in the HF amateur
bands regarding ALE, anyone can go to www.tactical-link.com
a site originated and maintained by Pat Gibbons, WA6UBE.

For general experimentation in HF band ham communications
there is www.hfpack.com Primarily upper bands on HF
with an emphasis on "pedestrian" equipment. :-)

>This is used, for example, on commercial and military
>circuits where link reliability is or great interest. With
>today's computer-controllable radios, I believe it would

>be quite feasible for someone to write ALE software
>for amateur use ...

It's already been started in amateur use.

For the government, Fed Std 1045A covers ALE standards
and Fed Std 1052 covers radio modems. Both are 1993
releases.

There is a large resource on the Internet for ALE techniques
for both civilian and government radio use. For those who
wish to actually find out about such things, I would suggest
a search using "automatic link establishment" rather than
the keyword "ale." For obvious reasons. :-)

>(Yes, someone will grumble "That's not REAL HAM
>RADIO!", but my point is that for emergency and
>disaster communications, "making it work" is the
>name of the game, NOT "following tradition.")

"Real ham radio" seems to be defined solely by the
personal criteria of the definer...or is that "definator?" :-)

NVIS (Near Vertical Incidence Skywave) propagation
techniques have been in use by militaries world over for
over a decade. Brian Burke has mentioned that several
times in here as an actual user of the technique.

Loud DXers seem to discount and denigrate NVIS due to
it being contrary to their own aims of longer distance
propagation in "radio sport." They define it as "NOT Real
Ham Radio" as if written with capitalization yet it is an
ideal technique that can be applied to HF comm for
emergencies up to about 200 miles.

This is a new subject thread on "punishment," something not
previously brought up. Please use another thread subject title
for new subjects.

>in an earlier post. I must confess that I don't see the words demand in
>there, nor do I see any mention of membership either.

The absence of a qualifier word indicate exclusivity implicitly.

Please consult my reply to Ed Hare on this.

> I look at it the same as voting in our countries elections. If I want
>to vote, I have to be a citizen, of proper voting age, and all the other
>qualifications as agreed upon.

No quarrel with that. I voted on March 5, 2002.

> If you want to have an effect on what is happening, then get involved,
>and exercise your rights. Your argument here sounds like the people who
>whine about politicians, but don't vote. If you want to change the ARRL,
>Join and vote.

The ARRL is a SPECIAL INTEREST GROUP, not a government body.
It is a private membership organization.

Voting qualifications as a citizen DO NOT APPLY to private membership
organizations.

>We are talking about a hobby here, and it is amazing that Amateurs even
>have a powerful organization like the ARRL to lobby for them. What other
>choices do you have for ARS representation. If you want to change it
>Lennie, join, get involved, and vote!

Thank you for the suggestions, MIKEY.

I have been involved with my government as a citizen. You may see
evidence of that in the Comments database for FCC 98-143. Look
under 13 January 1999 Comments. It is public record. You may
even go to DC and read one of the original paper copies at the FCC
Reading Room. [say you are from the official ARRL if you feel the
need]

There are a number of ways to work with the government, MIKEY.
They don't require a Big Brother or Orwellian approaches to having
some private SIG do the detail work.

>Hold on a second, Lennie. maybe you can help me with my comprehension
>here.

Sorry, MIKEY, I am not authorized as an English teacher. No help.

> Perhaps you could explain in terms that challenged people like myself
>can understand. 8^)

MIKEY, I would suggest you write to the ARRL for help with your
amateur radio understandings.

Did you have anything further, then, MIKEY?

>I recognize, and agree wholeheartedly with, your statement that
>voice is not limited to SSB and that there is plenty of need for
>amateur experimentation and innovation on the HF voice bands,
>too.

But doesn't that bring us around to the starting point? Why is
it that one is allowed to run a 3 kHz wide digital signal carrying
compessed, FECd voice bits in the "voice" bands, but not other
kinds of bits? The bits are indistinguishable when you put them
on the air, why are voice bits okay but other bits that look the
same not okay? Why can't wide-band digital modes compete for space
with the AM/SSB guys the way you want narrow-band digital modes to
compete for space with CW? And why is it that if the band fades to
the point where you can't finish your 3 kHz wide digital voice conversation,
you can't fall back to a 100 Hz wide text mode on the same frequency
to complete it?

What I think I wish is that there weren't "voice" bands and "CW/data"
bands, but rather that there were "6 kHz or less occupied bandwidth"
bands, and "1 kHz or less occupied bandwidth" bands. Since the FCC's
current mode regulations are sort of irrational when applied to
digital modes, and since the FCC apparently doesn't like micromanaging
what hams do with their signals and bands in any case, removing the mode
regulations in favour of simple occupied bandwidth constraints

plus "good engineering practice" might both make them happier and allow a wider variety of digital applications while keeping the traditional analog modes in their place.

Note that this doesn't prevent the voice guys from coming down the band, but they can only do so if they can figure out how to fit it in 1 kHz of bandwidth. As this would require a step improvement in the state of the art of "spectrum efficiency", a current favoured technical way to accumulate spectrum preservation brownie points, even the CW guys might not object to living with the (exceedingly unlikely; SSB is already pretty efficient for voice if your aim is communications rather than quality) possibility that this might happen.

I hate to rain on your parade, but I just obtained another Mexican
reciprocal license a couple of weeks ago, while in Mexico City
as a member of the US delegation to an international radio regulatory
conference.

While our Mexican hosts were (from my experience typically)
hospitable, including a senior official from CoFeTel (the Mexican
"FCC") sending me with one of her staffers ... in her car ... from
the conference hotel to the appropriate office(s) (you have to go
to more than one), then to the bank to pay the fee, then backwards
to the office(s) with the receipts, etc. to finally pick up the license
(about a 4 hour operation with a route that is so confusing that I
would NOT recommend it without the sort of guide that I had),
the license STILL prohibits contest operation (not that I care about
that) AND operation from Mexican islands.

I specifically asked if they meant places like Cozumel, or just more
outlying, perhaps ecologically sensitive islands. The answer was
"sorry Senior, no islands, period." (and I was sitting in the office of
and dealing directly with the head of the department that issues
reciprocal licenses to foreigners ... with a certain amount of "skid-
greasing already having been done ahead of time ...)

> I've been to Cozumel several times and the scuba diving is world class,
food
> is great, prices are very reasonable, wonderfull people, I love it there.

To
> be able to operate my rig and work some DX from this great locale would be
> icing on the cake for a great trip!

Agreed that the diving, food, etc. in Cozumel is great ... but getting
a license to operate there may turn out to be virtually impossible.
(and I would NOT recommend "winging it" if you get my drift ...)

> Anyone have any experience in doing something like this in mexico? Is it
> possible to obtain the permit before leaving home? Would love to hear
> suggestions, advice, or anything that might help. Thanks very much,

If you live near a Mexican Consulate, you may be able to do so ...
also, since you have a 6 call, if you're within traveling distance of
TJ, it used to be possible to get Mexican reciprocal licenses there
with a minimum of hassle ... but that was in the '92 time frame and
I don't know how that situation may have changed ...

I don't understand why the "no islands" thing, but it seems to be
a pretty firm thing with them ...

73,
Carl - wa6vse

>>ARRL has a policy decision that it will not oppose changes that would remove
>>Morse code testing as an international treaty requirement.
>
>Since very recently. The ARRL has been in existance since 1914.

Okay, but if you have to go back to 1914. . . :-)

>The ARRL has been OPPOSED to
>morse code test removal up to and including 1998 at which time
>the IARU reached a consensus view on removal of that test; the
>ARRL remained in opposition and announced so publicly.

I believe that you are talking about the IARU Region 3(?) consensus view on the removal of that test. ARRL is represented in that Region because of the US territories in the Pacific. At the time, I believe ARRL was the sole dissenting vote, in line with the stated policy at the time.

>The ARRL announced a policy shift LAST YEAR that "it will not
>oppose removal of the code test." Last year was 87 years since
>founding.

I think we can stipulate that you can add and subtract okay, Len.

>The recent policy statement is rather boilerplate as far as political
>wording goes. The ARRL has simply given up on the code test
>issue around ITU-R S25.5 along with implications that it will not
>oppose FCC removal of the code test.

The ARRL has not changed its policy wrt the FCC removal of the test. I imagine it will not consider that matter until there is something specific on the plate to consider.

>Null statement. No opposition,
>no stance, neutral. No fighting. Concession. Tacit admission of
>defeat. Non-musical (no violins).

That about sums it up as far as the international requirements go.

>I'll have to give the ARRL back-room boys a round of applause on
>recognizing the future. FINALLY.

The policy was not kept in a back room, Len. From what I heard, the discussions about that policy would have been appropriate for a back room. :-)

>>Is this another one of those "what was said, what was heard" sort of things?
>

>Is this another ARRL-apologist's spins to misdirect the subject?

No, I think we kept right on subject.

>>Is this another one of those "what was said, what was heard" sort of things?
>
>Is this another ARRL-apologist's spins to misdirect the subject?

Nope, we are still on the subject.

Goodness, you are easily confused when you want to be!

>For at least seven decades the ARRL has presumed to be the
>"only" representative of the US radio amateur to federal radio
>regulatory agencies. That is NOT "imagination." It is recorded
>fact.

Not in the ARRL matter I have read, Len. The League has encouraged all to make
their own filings. As I said, "in your mind."

>p to FCC 90-53 the ARRL had been OPPOSED to a code-test-free
>license class. That is NOT "imagination." It is recorded fact.

You are correct.

>Up to FCC 99-412 the ARRL had been OPPOSED to eliminating all
>but one code test rate for an amateur radio license having below-30-
>MHz privileges. That is NOT "imagination." It is recorded fact.

You are correct.

>Up to the end of the year 2000 the ARRL had been OPPOSED to
>the elimination of the ITU-R amateur code test. That is NOT
>"imagination." It is recorded fact.

You are correct, but how do those statements explain your belief that ARRL is
trying to control you?

>Why do you deny that the ARRL has had a strong influence
>on the government regarding amateur radio regulations?

I do not deny that Len. I would not put the amount of energy I put into the FCC
regulatory filings I particiate in if I felt that such work would not have
influence. Why would I *want* to say that?

>Are you saying that First Amendment rights "do not apply" when
>it comes to amateur radio regulations?

Yup, it is another one of those "what he said, what he heard" sort of things.

>>Is this another one of those "do as I say, not do as I do" sort of things?
>
>Is this another ARRL-apoligist's spins to attempt misdirection
>or ridicule?

I don't believe that misdirection is needed here, Len, and we are still on topic. If you feel ridiculed, it was not due to misdirection.

If that is your way of ceding that ARRL did not say that one should be loyal solely to the ARRL, I think we are in agreement.

>There is NO qualifier of any kind as to the national-international
>organization
>"which represents amateur radio." It is SOLELY that of the ARRL. Succint.
>No shading or implication of any other national or international

No, I guess we are not in agreement. If your ARRL-antagonist spin is that ARRL does not promote loyalty to other organizations through the amateur code of conduct, you are correct.

There, wasn't that easy. Do you feel better now?

>>Do you still think the intent of the point in the code of conduct is to be
>>loyal "solely" to ARRL?

>Absolutely. This has been explained to you.

Of course, the fact that the League promotes other organizations from time to time won't enter into the discussion, I am sure. :-)

Such problems happen all the time with all modes ... receiver
blocking, AGC "pumping," etc. are facts of life ... this is NOT
something that is unique to CW or which justifies a Morse test.

> The scenario could be reversed. But I suspect your response would be
> something
> like "tough - the CW station should use a 'better' mode" or some such.
> ;-)

Not at all ... my reaction would be "stuff happens." Turn the
knob a bit and find a frequency that works.

You seem to think that a Morse test will guarantee some sort
of idylic, interference free world ... that's simply not the case.

What about the situation where other mixes of modes cause
the same phenomenon and the operators can't copy each
other's transmissions? Same thing ...

We can't partition our bands rigidly into little compartments
for each and every mode ... that would be EXTREMELY
wasteful.

> > any more
> > than a Morse op needs to be able to copy PSK31 or RTTY

> > I think you're grasping at straws ..
>
> Nope. One of the most fundamental reasons for radio regulations is the
> avoidance of interference. Hardly a "straw".

Same as above ... "stuff happens" ...

You're making it sound like a little unintentional interference
is the end of the world as we know it or something ... the
fact of the matter is that there is no way that some modest
amount of unintentional interference is totally avoidable ...
whether between modes or same mode on same mode ...
propagation and other factors virtually guarantee it ... lighten
up a bit and be more flexible ... things will work out without
stuffing everyone into narrow, confining little "cubby holes."

Same thing can happen with key clicks and SSB IMD. The solution to both
problems is better address techncially, not through code testing.

>How far away from each digital signal must a CW station stay to avoid
>such
>problems?

Just far enough not to have problems, I would say.

And in any event, knowing or not knowing the code would not have prevented the
interference.

> good move.

"If the frequencies are available at the stations involved" ... this
sounds like a matter of proper preparation and planning to me.

> > In fact, with the propagation prediction software available,
> > (I use PropMan2000 from Rockwell Collins ... $99) it is
> > possible to predict the best frequency quite accurately.
>
> If the emergency stations have it available, of course. And the
> predictions may not be accurate when most needed.

It's a useful tool, not a "cure-all" ... and only one station need
have access to such software to do the predictions for an
entire net ... if it's not available, fine ... that's where operator
knowledge and experience come in ...

> > The software even goes to the internet to download the
> > latest space weather and other factors so that the prediction
> > is truly as accurate and up to the minute as possible.
>

> Great! But if internet is available, why would ham radio be needed?

Stations outside of the affected area could run the predictions
for, say the next 24 hours, then relay them to the parties that
need them ... even without the "to the minute updates,"
the software does a very good job ...

> > Another thing which would be very useful for disaster
> > and emergency communications ... and also for routine
> > skeds to talk with friends (but would obviously not apply
> > to or appeal to DX chasers and contesters) is the potential
> > of using ALE "Automatic Link Establishment" software.
>
> Sure - IF the stations that need it, have it available.

I said it could be a useful tool in one's toolbox ... not that
it was a necessity ... I tend to focus on planning and
preparation ... not on relying on spur of the moment use
of "minimalist" techniques ...

> > This is used, for example, on commercial and military
> > circuits where link reliability is or great interest. With
> > today's computer-controllable radios, I believe it would
> > be quite feasible for someone to write ALE software
> > for amateur use ...
>
> That's a "who's going to tie the bell on the cat" sort of someone.

???? I'm curious what you mean, but don't have any idea
what it is ...

> > (Yes, someone will grumble "That's not REAL HAM
> > RADIO!", but my point is that for emergency and
> > disaster communications, "making it work" is the
> > name of the game, NOT "following tradition.")
>
> Actually, the tradition is to make it work.
>
> The problem is having all of this stuff available and working when needed,
with
> people who know how to use it.

There we are back to proper planning and preparation ... instead
of relying on throwing something together willy-nilly after it's hit
the fan ...

>of amateur radio technologies.

Give the masses a bit more credit, Carl. First, the survey response doesn't really support your item #3. The masses have adopted more digital technology on HF in the teeth of existing CW use, so the historical trends are toward progress. The limitations on HF digital are not social; at this point, they are regulatory.

At least one manufacturer is working on adding digital voice to their equipment. That factor alone will promote its use. Where it has advantages, hams will adopt it and use it.

I don't know if it will have the advantages of weak-signal modes like SSB or CW, though. Right now, I don't know if the encoding methods are robust enough to function in the teeth of noise and QRM. I have little doubt that the development of robust encoding could be done, but right now, what is really lacking is any turnkey programmable system.

>you can't fall back to a 100 Hz wide text mode on the same frequency
>to complete it?

I agree completely; if there need to be any limits on amateur transmissions vs
frequency, bandwidth should be the limit, not content or data rate. If hams
can pump enough signal to noise at it, they can get some pretty high data rates
in a moderate bandwidth. The rules that permit the use of "unspecified digital
codes" could really let us do some neat R&D, if the rules didn't hem that in.
The FCC has clarified that posting information about the encoding method on a
public web site is enough "public knowledge" to permit a particular unspecified
digital code.

>What I think I wish is that there weren't "voice" bands and "CW/data"
>bands, but rather that there were "6 kHz or less occupied bandwidth"
>bands, and "1 kHz or less occupied bandwidth" bands. Since the FCC's

>> modes. Perhaps that is what we should be teaching new hams.

> I don't really agree with that statement. If propagation on 40 mtrs drops
>out, we
>should then
>plan on automatically changing bands to 75? That opens up a whole set of
>problems.

If propagation on 40 meters starts to fail, it is possible to temporarily switch to a narrower mode such as CW or to a digital mode with better encoding and complete the message. This presumes, of course, that one has only one or two messages to complete. But if the band is failing, it is generally only a short time before the band goes out altogether. In that case, changing to a frequency with better propagation is the better choice.

I just find it odd that in all this "emergency" scenario, the only solution to a failing band being offered by people is the one that supports their views on code testing.

>If you've ever changed bands under those circumstances, you'll understand. I
>have.

We used to do it all the time on the county hunters nets, Dick, with 8-foot mobile antennas. Changing bands is a better choice most of the time than changing modes.

>What usually happens is the two stations lose each other, and wind up back on
>the
>same frequency trying to make a dying circuit work, absent better previous
>planning.

You are correct, previous planning is important to emergency communications. That planning let us change bands on the CH nets with impunity.

Mexico is not the US. They have no illusions about making it easy
for "ordinary folks" to get permits or licenses of any type.

>Anyone have any experience in doing something like this in mexico? Is it
>possible to obtain the permit before leaving home? Would love to hear
>suggestions, advice, or anything that might help. Thanks very much,

Depends on who you know and who THEY know, and the size of the salad
that you buy the local radio inspector (I heard that phrase used by
one on a visit to the US).

Serioulsy, check with ARRL HQ which maintains a file of "how to
get things done" in foreign countries. IIRC we do not have a
separate reciprocity agreement with Mexico, but they may be included
in the Inter-American treaty (CITEL). If so, you would have to get
an International Amateur Radio Permit, which is like an International
Driver License, to avoid a separate proceedingin Mexico.

The US issuing agent for the IARP is the ARRL, so check with them.

Vaya con Dios.

>founding.

The ARRLis a membership organization.

It has been since it's founding.

It's "policies" have reflected the majority opinion of the membership.

There's no conspiracy or black helicopters.

>Concession. Tacit admission of defeat.

No defeat, Lennie. It's a change of policy based upon the expressed views
of the membership. What part of "democratic process" are you deficient in
understanding?

>I'll have to give the ARRL back-room boys a round of applause on
>recognizing the future. FINALLY.

Your colostomy bag is leaking again, Your Malodoressness. No "back room
boys", no secret agenda, no international intrigue. The membership's desires
changed. The ARRL followed suit. What part of the democratic process are you
deficient in understanding?

>Is this another ARRL-apologist's spins to misdirect the subject?

What's misdirected?

>>ARRL has a policy decision that it will not oppose changes that would remove
>>Morse code testing as an international treaty requirement.
>

>The meaning of that policy statement has been explained to
>you. That policy statement was made last year. It DID NOT
>APPLY prior to that year.

And prior to that it was the general opinion of the membership AT THAT
TIME that code testing was prefered.

Now it is not.

What part of that is it so hard to understand? A membership organization
is doing what the membership wants.

>For at least seven decades the ARRL has presumed to be the
>"only" representative of the US radio amateur to federal radio
>regulatory agencies. That is NOT "imagination." It is recorded
>fact.

There was no "presumption" to it. With the exception of the occasional
"wannabe", the ARRL has been the only Amateur Radio organization in the United
States. No conspiracy. Simple market forces. The other organizations had
neither the broad appeal or infrastructure to provide what ARRL is already
doing.

CQ magazine is the only other entity that comes close to doing anything
the League does in terms of "membership" (subscriber) services.

Lennie...YOU have all this unused, wasted time...Why don't YOU create a
new organization?!?!

Since YOU obviously have ALL the answers, I am sure that the unwashed
masses will swarm to your feet, anxious to throw off the yoke of oppression of
the evil Empire of the ARRL.

I heard a strange signal the other night. It sounded like a pot of
boiling eggs and was splashing all over the low end of the band. Got
any idea what that was? I don't remember what band it was on.

This also includes the wordsmithing of Leonard H. Anderscum, who is very proficient at such twisting of the word...the cut and paste...the "snip"...

Nice try, Lennie....no matter HOW "patiently" you try to explain it, it's still a spin from you.

>The mission of any
>military is exremely harsh...put succinctly it is "kill or be killed."

Spoken like the true "In The Rear With The Gear" geek that I have always presumed you to be.

Also spoken by someone who has absolutely NO experience in any kind of tactical military operations. You've been watching too much of that new "Combat Missions" game show, Lennie.

>>Do you still think the intent of the point in the code of conduct is to be
>>loyal "solely" to ARRL?
>
>Absolutely. This has been explained to you

And of course Lennie's explanation is absolutely correct. Now that HE has spoken, we can all quit.

Bad Lennie....bad Lennie.....

I thought 87 years would be at least 9 decades.

>
> You are correct, but how do those statements explain your belief that ARRL is
> trying to control you?

Ed, when Len was working at relaying 1.3 million rtty messages over 2
years, the ARRL planted a microprocessor in a part of his body that they
felt would not be used and therefore never noticed....his brain.

That's why he wears aluminum foil overalls and hats.

>
> I don't believe that misdirection is needed here, Len, and we are still on

You ARE having a very senior moment. He said he was finally getting around
to
getting his ham radio license, at age 52. (Pretty much typical these days.
In our day early teens was more typical). But that was why he was looking at
the question pools.

Besides, I'm not in Missouri, I'm in a Salt Lake City suburb. Spent the
winter in Phoenix. Got some beachfront property for sale there. Interested?

Clues? You're a complete and dismal failure as a "detective", Sir Cecil. I never knew the man existed until his first post here yesterday. I hereby state categorically that I have no connection whatever with Valentine Germann other than that we are both, apparently, residents of the same state. That good enough for ya?

He SAID he's been reading your drippings here for the past year. I guarantee that's enough for him to get your drift. For anyone else too, for that matter.

>

Rarely if ever will you see so many "longtime hams", engineers all, who speak as though they had no experience and hardly a clue to that in which they claim to be expert. Amazing.

Yes, the tradition is to make it work, Jim, and by far the best way to make it work NOW, when it is needed, while the traffic sits waiting to be passed and while it is still timely,
not after some amount of detailed configuration and other time consuming tinkering, propagation forecasts failing to hold up, etc. etc. ad nauseum.
The need
is to know what works, when, where and * get it working*. NOW, not sometime tomorrow.
If one has available all the material and information needed to use the most optimal mode -and all of it works right, when you need it to work-
by all means USE IT! But anyone with experience in these situations KNOWS that mother nature has her own way of seeing to it that the best laid plans will come up woefully short.
Any ham who doesn't understand that at the bottom line it is he or she who will make the difference in whether or not vital message traffic is passed successfully places himself at high risk for failure. That is true not only for hams, but for most any endeavor.

>
> The problem is having all of this stuff available and working when needed, with
> people who know how to use it.

Wasted words on the techies, Jim, we've been over that road so much the pavement has grooves in
it.
If it isn't ALL based on high tech, they want nothing to do with it, nor for anyone else to have anything to do with it either, their disclaimers notwithstanding. They'd rather see the whole communications system fail.

Dick

Dennis, I believe your views here and what you posted earlier re. the WTC Part 15
activity on IEEE 802(.something) is actually pretty close to what the ARS will
look like once the FCC finally (if it ever does) reorganizes us to a truly modern
service. And the bottom line is there is, or at least should not be, any conflict or
problem in integrating modes, old and new, into such a reorganization.

I may be an "Olde farte" and not a design engineer, but if you think I have a backward
viewpoint of the world of communications its because you've been believing the nonsense
that Cecil and Carl have been spouting for so long. And that's exactly what they wanted
you to believe solely because I believe in hams being able to use the most basic mode
of radiocommunications. Which, of course, is manual radiotelegraphy.

Dick

I'm not trying to win any argument, in fact you and Ed are doing all the
arguing. I merely
state what I know to be factual, and as you can see it is once again backed up by

authoritative sources.

> Why are you not willing to spend what you say is a trivial

You give CW, and Intel, far too much credit.

ONE MORE TIME.....

CW should be available as a last resort, useful
when whatever better mode you may be lucky enough to have available fails. Got it?

All you guys who are so hard-core in your belief that "planning" will solve all ills
and provide all you need are in store for a brush with Mother Nature. Stuff happens
on its own schedule, at a time and place of its own choosing. To blithely assume that
all hams can, should, and would "prepare" themselves and their stations to handle
any communications emergency that might occur anywhere is asking the futile. Sure,
larger organizations and EMA associated groups often spend considerable time and
funding to set up serious emergency systems, which are rarely used, and this facet

of ham radio often becomes a sub-hobby itself, but it is frankly a rarity when considered
as a small part of the whole which is ham radio.
In a widespread disaster, the very first need is for information to be passed from the scene of destruction to relief and rescue agencies far enough away that they aren't directly affected by the incident, and situated so that they would serve as the help that such incidents demand. Without explicit information as to what happened, exactly where it happened, the numbers of persons needing what sort of assistance, in what exact form, and exactly where to send that relief, over what surviving routes- that is the sort of activity that ham radio operators should be expected to quickly fill an instantly occurring need. Prior planning for such an occurrence can be expected to be minimal since no one can predict with any accuracy where or when they will happen.

Most states have, or had, statewide emergency nets which meet on SSB or CW, and few if any have organized nets that use other modes. So when disaster strikes, what would be

the most likely mode that most hams would be expected to fire up their rigs on, for coverage
beyond the local area? SSB, of course, and when that fails, CW.
Planning for the use of more efficient modes is indeed a desirable thing. But to realistically
expect to find many hams in any given area actually using them on the air on the spur of the
moment at a time of disaster is somewhat unrealistic. One uses what one finds available at the
time of need. If that happens to be SSB and when that fails due to conditions, CW, it makes sense to be prepared to "meet the need".
Dick

So your point is that since you were an engineer, and not "dumbed down" by
a technical test that you would have been able to pass regardless of its
complexity
then no other ham who acquired a license other than entry level would do so
while
lacking proper technical knowledge. You insist you're not an exception when
you are
the very model of an exception. Save the 20wpm code test which is not a part
of
the written but is a separate example of lowered qualifications on its own.

> You see, Dick is trying to have his cake

> Dick clearly believes that if everyone avoids taking an amateur radio
> exam, then the ARS will not be dumbed down.

Wrong. Since the time when I first came to the point of helping others to
get
their ham radio license I have always believed that anyone who wants to get
licensed should be able to have the opportunity to do so. Not an eased
qualification opportunity, but a reasonable opportunity. That's why I started

a VE team and ran it for the first eight years of VE testing. Your
conclusion is false, and indeed it only matches your flawed sense of
the way things are, and does not match with reality at all.

> Does that hint something
> about sandboxes?

You have chosen to "reply" by an entire quote without adding
any comment whatsoever.

I will have to take that as either capitulation or frustration at not
being able to add any spin to a reply.

Matters not. Quibbling over word ordering in phrases is
counterproductive.

>>issue around ITU-R S25.5 along with implications that it will not

>>oppose FCC removal of the code test.
>
>The ARRL has not changed its policy wrt the FCC removal of the test. I
>imagine it will not consider that matter until there is something specific on
the
>plate to consider.

The preliminary view of the FCC for WRC-03 on S25.1 through S25.6 has
been posted at the end of February. If you will recall, I am the one
who gave the document number and its location at the FCC...no one else
gave any specifics although Carl Stevenson came very close.

Just "how specific on the plate" must something be?!?

>>I'll have to give the ARRL back-room boys a round of applause on

We all know that back-room deliberations are kept secret there.

Have you anything NEW to report?

>>>Is this another one of those "what was said, what was heard" sort of
>things?
>>
>>Is this another ARRL-apologist's spins to misdirect the subject?
>
>No, I think we kept right on subject.

Then we can all take it that you are spinning as an ARRL-apologist.

Understood.

>>>Is this another one of those "what was said, what was heard" sort of
>things?
>>
>>Is this another ARRL-apologist's spins to misdirect the subject?
>
>Nope, we are still on the subject.
>
>Goodness, you are easily confused when you want to be!

Not at all. Misdirection into squabbling is easily perceived.

>You are correct, but how do those statements explain your belief that ARRL is
>trying to control you?

Incorrect. I stated that the ARRL is exercising CONTROL through labeling
itself as THE representative of US amateur radio to the FCC and from an
88-year tenure under such a claim. That is CONTROL over ALL amateurs.

ARRL membership is still less than a quarter of all licensed US radio amateurs.

>>Why do you deny that the ARRL has had a strong influence
>>on the government regarding amateur radio regulations?
>
>I do not deny that Len. I would not put the amount of energy I put into the
>FCC regulatory filings I particiate in if I felt that such work would not have
>influence. Why would I *want* to say that?

Who is Ed Hare's employer?

>>Are you saying that First Amendment rights "do not apply" when
>>it comes to amateur radio regulations?
>
>Yup, it is another one of those "what he said, what he heard" sort of things.

You did not answer the question.

You wish to use the single-sentence question as a "reply" on most
of your postings. That is a perfect example of the "what he said, what
he heard" sayings.

Why is that method exclusive and unidirectional for yourself, yet
"not allowed" for others?

>I don't believe that misdirection is needed here, Len, and we are still on
>topic. If you feel ridiculed, it was not due to misdirection.

Please do not engage in any more mind-fornication techniques. Those
are tiresome and transparent.

Your employer may not be pleased. The ARRL still hasn't membership
of even a quarter of licensed US radio amateurs. You are not making
things better.

False attribution.

Some (K2ASP) have referred to multi-tiered (older class) licensing as a "federal merit badge." [see early Comments on 98-143]

Presumably that referred to a boy scout merit badge.

What does Scouting have to do with US amateur radio licensing policy? Please be specific.

Why aren't the Girl Scouts included in this "oath" discussion? Is it because US amateur radio has become a white male dominated avocation?

Why are all your "replies" just questions?

Is that the "fun" you engage in?

I have NO "assumed name" within the body of ANY chat room message.

Why are you "having fun" with this sort of nonsense?

Is this what grown-up ARRL employees do to tout the glories of ARRL membership and "representation?"

One of the Directors of the ARRL is named "Fried Heyn" isn't he?

Are you really sure you want to go this way on names?

You really should try a little advanced planning once in awhile, Dick.
You might find it to be downright useful.

Maybe to you, but I've found that decent rigs have defeatable AGC,
narrow filters and high dynamic range. And they're not expensive.

>this is NOT
>something that is unique to CW or which justifies a Morse test.

Of course it's not unique to CW. But it points to reasons to keep
modes separated, which is the issue.

Dennis,

You are absolutely correct as far as I am concerned. If I gave
any other impression, it was by not being clear ... "bits is bits"
is absolutely correct and the content doesn't make a darned
bit of difference.

And as far as your last question is concerned, I see no reason
not to be able to fall back to a more robust mode on the same
frequency ... though that robustness may not necessarily be
achieved by going to a narrowband mode, but could alternatively
use a more robust modulation and coding scheme in the same
bandwidth. (one option, in addition to always thinking "narrower
is (always) better")

> What I think I wish is that there weren't "voice" bands and "CW/data"
> bands, but rather that there were "6 kHz or less occupied bandwidth"

> a wider variety of digital applications while keeping the traditional
> analog modes in their place.

I find myself unable to find a rational reason to disagree on
a technical basis ... or a philosophical one, either, for that
matter.

I've been speaking in terms that have been intended to result
in the least "inflamation" of the traditional view that voice and
data are (and must forever remain) separate ... but the engineer
in me knows that that's a contrivance that's outdated.

> Note that this doesn't prevent the voice guys from coming down the
> band, but they can only do so if they can figure out how to fit
> it in 1 kHz of bandwidth. As this would require a step improvement
> in the state of the art of "spectrum efficiency", a current
> favoured technical way to accumulate spectrum preservation brownie
> points, even the CW guys might not object to living with the
> (exceedingly unlikely; SSB is already pretty efficient for voice if
> your aim is communications rather than quality) possibility that this
> might happen.

I've always maintained that the metric of spectrum efficiency
is bits/Hz ... to do voice in a 1 kHz or less bandwidth would
require some pretty sophisticated modulation and coding
and even still would likely suffer in terms of robustness
(can't violate Shannon ... the old tradeoff between bw and
s/n ratio) Your comment that SSB is already pretty efficient
for voice is correct ... essentially a 1:1 mapping between
"source data" bandwidth and "channel bandwidth".

However, deep down in the engineer in me, I do believe
that ultimately, in the future, bits will be bits and integrated
voice and data service, where it, as you put it, it doesn't
matter what the bits represent, will prevail. That approach
will allow flexible, efficient allocation and use of bandwidth
which adapts to the demands of the moment ... one minute
a frequency may be carrying voice, the next computer data
such as e-mail or a file transfer, the next a picture, etc.

Whoa ... a modern view of the future ... you and I need to be
more careful how we speak around here ... our species has
a history of burning heretics at the stake :-)

>solely to the ARRL, I think we are in agreement.

We are not. I gave you the logical proof in plain text before.

Absent any qualifier word, the loyalty to a national/international representative is implicitly ONLY to the ARRL.

Your denial of the obvious and attempts at misdirection do not apply.

>No, I guess we are not in agreement. If your ARRL-antagonist spin is that

>>>loyal "solely" to ARRL?
>
>>Absolutely. This has been explained to you.
>
>Of course, the fact that the League promotes other organizations from time to
>time won't enter into the discussion, I am sure. :-)

The ARRL MENTIONS other organizations. Since when did it "promote" them?

Your sentence does NOT invalidate what I've explained to you about article two of "The Amateur's Code."

That article is rather specific as to the loyalty of an amateur to THE national/international "representative" of amateur radio. There is NO "promotion" of any other national or international organization in article two.

Are you going to continue this word-game charade to please your
employer?

Right. And since CW is the predominant digital mode, it only makes sense to
have it
available in our box of tricks, also, particularly as a mode of last resort..

Glad to see we finally agree!

As always, it depends on circumstances. If one is attempting to pass a message,
or a few,
and can't complete it due to changing conditions, it may well be better to finish
the task at
hand before changing frequencies IF conditions on the "other" frequency are likely
to be at
least as poor. It is well known that emergency or disaster communications commonly
are
accompanied by very poor conditions as high storm static levels. Better use what
you have
at hand to finish the job at hand before looking into dumping the circuit
completely in favor
of a band change that might make things worse.

>
>
> I just find it odd that in all this "emergency" scenario, the only solution to
> a failing band being offered by people is the one that supports their views on
> code testing.
>

Why? Seems you find yourself constricted in your thinking just so you can go
along
with the code bashers. Curious,to say the least.

And it certainly is NOT the "only" solution, rather a solution that *is instantly
at hand*
one that comes prepackaged in virtually every HF ham rig built, available for use
only if hams
know how to use it.

>
> >If you've ever changed bands under those circumstances, you'll understand. I

When operating under normal conditions, free of storm static, with a prearranged
plan
and a group doing what they routinely do, I certainly agree. Assuming you will
find
such circumstances in any given disaster/emergency situation where long distance
traffic
needs to be passed is making an assumption that is likely to fail to deliver.

>
> >What usually happens is the two stations lose each other, and wind up back on

>
> You are correct, previous planning is important to emergency communications.
> That planning let us change bands on the CH nets with impunity.
>

There probably isn't a whole lot you can do to inform me in the area of
emergency comm.
planning. I spend a dozen or so years -at work- deeply involved in communications
planning
for relief of a major earthquake and its victims, and learned a lot that I see
being overlooked by all the posters here who talk of such fine plans. Widespread
disasters have a way of not going according to some human plan.

The mechanics of post-disaster communications should indeed be the subject
of intensive planning and preparation. And a part of that planning that is
routinely
overlooked seems to be the part that can't be properly planned for-the case where
there
are people thrust into action by circumstances who must use what they find
available
on the spur of the moment. The hams who are what I always call the "early
reporters"
are some of those people. People who live in the area affected and upon whom
the outside world must rely on to get the initial information to the outside, upon

whom rests the lives of victims who need help soonest. Anyone who believes that every ham will be prepared to the maximum for all possible events and circumstances
likes to ignore reality. Most hams make little or no preparation beyond their routine activities.
That means that most have SSB, CW and 2meter FM available, and capabilities beyond

those is outside the norm.
Why so many posting here would decry the use of CW in such
circumstances is really strange and indeed indicates some sort of Agenda.

That's exactly right, I haven't offered any such proof. And just for the record, yet one more
time, I DID NOT make any such claim, thus I intend to offer no such proof.
. That is all a construct of you and Ed who desperately
want, for some obscure reason, for me to look like I said that when I said no such thing.
Seems like y'all would rather they just go ahead and make the memory word associations

to pass their tests without anyone making mention of it. None of them are dumb enough
to try to memorize all the questions and their answers, and they know they don't need to.
It does make one wonder why its so important to you that no one talk about it. New hams-
to-be sure do know all about it.

Mexico hasn't signed the CITEL agreement on IARP,
so an IARP is worth zip nada in Mexico.

CITEL is, however, TRYING to "encourage" member
countries to sign on to recognize the IARP ... however,
while I love Mexico, I suspect that the approximately
$82 fee for a 6 reciprocal permit (valid for a maximum
of 6 months, or until your tourist card expires) is a factor
in motivating them not to rush to sign on ...

"The future"??? Sounds exactly like the ancient Internet. It's been around
for
many years already.
Ham radio should be an RF version of the Internet??? That might be a way to
get rid
of a lot of hams. How do you plan to keep interest in ham radio up with that
"plan"?

Dick,

Your assertion that "I (we)'d rather see the whole communications
system fail is patently false.

What I said (and some others have agreed with) is:

"Good planning and preparation for emergencies are more
valuable than Morse skill." (because if you've planned and
prepared well you won't NEED to fall back on Morse as a
"mode of last resort".)

... which is YOUR favorite "justification" for Morse testing.

(Let's just call it the "Dick can't plan things well and isn't willing to
prepare properly rationale for attempting to justify Morse testing.")

Yes, I know ... but blocking, etc. still happen ... if the operator
knows how to use available controls on his radio, they can
be minimized, I agree ... but they still happen.

> >this is NOT

Yes ... and as you will see from my response to Dennis'
well-reasoned comments, I have very mixed feelings
about that from a technical/spectrum management
perspective, but I've been trying to be sensitive to the
political/traditional sensitivities of many hams and not
generate large amounts of inflamatory turmoil ... then
YOU come along and advocate a 35% Morse ONLY
setaside in all of the HF bands !!!

> >You're making it sound like a little unintentional interference

>
> Nor are you authorized as a member of the ARS. I notice that has not
>stopped you from posting your thoughts on that.

I have expressed the firm opinion that US amateur radio, indeed
all of amateur radio is an interesting, enjoyable avocation. Does
one need "authoritization" to do that?

Both Presidents Bush and Clinton have endorsed US amateur
radio. They are not "authorized" members of the ARS.

None of the FCC Commissioners or staffers need be "authorized"
by an amateur radio license to set or enforce regulations pertaining
to US amateur radio.

This chat room is not "authorized" to be closed only to "authorized"
ARS members. Maybe you should quickly pull out your "authority"
and close it so you will not be bothered by "unauthorized" citizens.

> Yes, I do. Why do you choose to use words, like vow, when the word
>actually used was offer. I was kind of hoping you would have answered
>that in the last post, but you must have forgotten.

Why did you choose to argue - incorrectly - some words in an old,
rewritten "Amateur's Code" which clearly state the ARRL's
claim to being the ONLY national/international organization "through
which amateur radio is represented?"

You attempt petty squablings over words because you feel someone
has sullied some personal pride you have. You've been put down
and refuse to acknowledge that, preferring to engage in word fights.
Some find such fights enjoyable just as some individuals are
sociopathic and are "superior" through "authorization." I would
suggest you direct your attention only to "authorized" ARS members.

This keeps discourse closed (and in-bred) wherein all can give each other high-fives over the good job each is doing. The public will never know what happens. No pain, no negative criticsm, everything static just like "it has always been that way." Doesn't that sound good for the "authorized" in the ARS?

With some really good "authorized" technical smarts the "authorized" might figure out how to keep RF interference from "unauthorized" electronic equipment all around their "authorized" residential radio stations. Without an "authorization" all those RFI victims must be doing illegalities on "unauthorized" interference reception!

That's just a reducto ad absurdum example of the kind of silly pride exhibited over words made by a very "authorized" organization for 74 years. If you wish to quibble over "authorization" for free speech in the USA, I suggest you take it up with the Supreme Court of the United States in regard to constitutionality. Good luck.

Ed:

Why would you get fired if you went to work after winning the lottery?

I once won $800 in the lottery, and didn't quit or get fired. However, even after winning such a small amount, it was surprising how many people thought I "owed" them free drinks, meals, etc. I can just imagine what it must be like to win a few million -- but I'd still be willing to struggle with that problem!

GEEZUS FAH-REEKIN' KEE-RYST!

Leonard H. Anderson berating someone (especially someone HONORABLE) about not quoting an entire post! Who wudda thunk it?

How much lower can this mudworm squat?

> If you will recall, I am the one
>who gave the document number and its location at the FCC...no one else
>gave any specifics...(SNIP)

Perhaps it's because SOME of us have more important things to do than chase the minute details of WRC's. Some of us CAN operate on the air, unlike yourself. Can you say "Anally retentive"..???

>Just "how specific on the plate" must something be?!?

Well, since you again berate Ed for allegedly not quoting your post, and then asking him a question out of context, I guess that would be hard to answer. But how about the FCC "not moving" until something SPECIFIC has occured with the TREATY that they are obliged to adhere to?

>Then we can all take it that you are spinning as an ARRL-apologist.
>
>Understood.

(A) He's not apologized for anything.

(B) There's nothing to apologize for.

You, on the otherhand, have reams to apologize for. Lying. Antagonizing. Slander. Misrepresentation. Lot's more, but those will do for now.

>>Goodness, you are easily confused when you want to be!
>
>Not at all. Misdirection into squabbling is easily perceived

He's done neither, so what is it you perceive, Lennie?

>>You are correct, but how do those statements explain your belief that ARRL
>is
>>trying to control you?
>
>Incorrect. I stated that the ARRL is exercising CONTROL through labeling
>itself as THE representative of US amateur radio to the FCC and from an
>88-year tenure under such a claim. That is CONTROL over ALL amateurs.

Then get a license, join the League and vote to change it.

>>>Why do you deny that the ARRL has had a strong influence
>>>on the government regarding amateur radio regulations?
>>
>>I do not deny that Len. I would not put the amount of energy I put into the
>>FCC regulatory filings I particiate in if I felt that such work would not
>have
>>influence. Why would I *want* to say that?
>
>Who is Ed Hare's employer?

What does it matter WHO his employer is, Lennie? his first sentence..."I
do not deny that, Len."

Are you now suggesting that because Ed's basic philosophical beliefs on
Amateur policy are the same as the League's, that his is just a "puppet"
response?

Seems to me one unlicensed Left Coast antagonist has been wenching about
people being able to speak their mind unencumbered...

However that ONLY seems to apply when the opinion expressed does NOT
counter your rants, Your Gonadlessness......

>You wish to use the single-sentence question as a "reply" on most
>of your postings.

I repeat the thinly veiled explitive at the beginning of this response...

POT/KETTLE/BLACK

>Why is that method exclusive and unidirectional for yourself, yet
>"not allowed" for others?

Hmmmm......You berate him for a question posed, then pose one
yourself.......

>Please do not engage in any more mind-fornication techniques. Those
>are tiresome and transparent.

POT/KETTLE/BLACK

Whatta Putz.

> You are not making things better.

Let's ask 1000 Amateurs who Lennie Anderson is and then ask who Ed Hare is...

>for voice is correct ... essentially a 1:1 mapping between
>"source data" bandwidth and "channel bandwidth".

I don't think the last sentence quite captures it. To put it
in geeky terms the strength of SSB is that it is redundantly coded
(i.e. you can figure out what is being said without receiving it all
quite the way it was sent) in a way that provides a near-optimum match
to the maximum likelyhood decoder attached to your ears. The guys
that are good at it (this wouldn't be me) say this about CW as well,
actually, and I see no reason to disbelieve that either. Computers
can do neat stuff fairly easily if you change the problem outside
the application range humans can manage, say to lower or higher bit
rates than wetware modems are good for, or to make use of better
available S/N than people need, but you've got your work cut out for you
if you want to go head to head with people at the S/N edges for voice (this
I know for a fact), and I wouldn't be surprised if the same applied to
CW-rate data (though I don't know this for sure).

About the voice-squeezing thing this must reflect biases derived from
working at different levels of the technology, since while you and Ed
Hare both fixated on bit rate versus S/N ratio and Shannon's law, my
first instinct would be to go after the voice codec to reduce the
required bit rate in the first place. I don't know the theoretical
limit on how low the codec bit rate can go before it become impossible
to encode comprehensible speach, but I'll bet it's only clever
algorithms yet to be invented to get it lower than the crappy 1500 bps
codecs I've heard recently. If you could get it down to, say, 500 bps

then you might get it to fit even with a 2:1 expansion for convolutional coding and relatively low-tech modulation. Note that this also indicates why I don't think bps/Hz is always the right measure of system (as opposed to subsystem) efficiency. If the point of the system is to squeeze voice into 1 kHz of spectrum, minimizing the bps requirement can provide as much or more efficiency as maximizing bps/Hz.

>However, deep down in the engineer in me, I do believe
>that ultimately, in the future, bits will be bits and integrated

>will allow flexible, efficient allocation and use of bandwidth
>which adapts to the demands of the moment ... one minute
>a frequency may be carrying voice, the next computer data
>such as e-mail or a file transfer, the next a picture, etc.

Actually my experience with wired networks is that the "killer app" is almost always a big surprise, and is pretty much never what you imagined it would be when you started, which is why I've ended up in the anarchist "I don't care what you do as long as you do it" school of traffic (non-)managment. In fact sometimes what you find out is that there is no "killer app", and that you've built a solution with no problem, but I know of no way to predict this ahead of time either. You need to try it to see what happens, and you shouldn't be surprised if you are surprised by the result.

What I do think in this case, however, is that if there really is an HF digital "killer app" or two for the ARS lurking out there somewhere, there's a about a 50% chance that the mode regulations are standing firmly in its way, so I think it is probably worth while to fix that.

I agree.... with many more Amateurs becoming more active in their community, continue with public education and doing other things for the betterment of ham radio, I don't think we have to worry. If we stay lethargic and be the kind of people that sit around and bitch about problems without performing action to illicit change, then we may have a problem and I may have to pay off that bet in an earlier message here. The lethargy is kind of like our club meeting tonight. When the question of who was going to take on a net control position for certain night, all we got is blank stares.... Nobody wants to get involved anymore. We need to develop a sense of involvement and community if we are gonna stay strong as a hobby service, amongst other strengths/qualities we need to maintain or improve.

Just another for the killfile Cecil... There are only a few here I have kill-filed. A few from here, and of course that garbage that flows from rec.radio.amateur.misc once in a while.

I still have people like Dick unblocked because he actually has a valid point at least once in a while.....

I'd like to suprise my kids.

We'll see what happens to the stock market when the 1st few years of boomers retire and start pulling money out of their retirement plans. Then about 10 years later when they pass on and all their homes are put on the market.

He didn't say that he would be a stranger to Valentine, Dick; he said that Valentine would be a stranger to him.

Do you *really* think that people who read this newsgroup but never post are not strangers to us? In what way do you know them?

Is this another one of those "I see things that no one else sees" sort of things?

Perhaps Valentine would be willing to memorize those 1000 Russian words to prove how trivial it is.

Val, I am sure you are reading all of this avidly. Don't take Dick's advice and try to use word associations to pass the test. The easiest way is to do what the rest of us did. We passed our tests with a combination of learning, memorizing, lucky guessing and hoping that a few of the tougher questions didn't appear on our exams.

Dick is giving bad advice to newcomers.

>
> "The future"???

Yes, ham radio could use a little "back to the future." (unfortunately)

>Sounds exactly like the ancient Internet. It's been around
> for many years already.

Did you ever notice how much more popular and prevalent
the internet is? Could there be a reason? Could it be that
it allows one to do so many things? (And that set could
encompass, and expand on "traditional" ham radio things ...
it's called "diversification" ... and it can be a key factor in
surviving in a competitive market ...)

> Ham radio should be an RF version of the Internet???

Not exactly (or totally) but, to some degree that would be
a valuable thing ... as I've pointed out, being able to bridge
around outages in the wired infrastructure would be invaluable
to the emergency management folks ...
we could provide a robust, portable, wireless means to do
that (granted we would not be able to provide the gigabits of
bandwidth that the internet backbone can provide, but we
COULD provide very useful amounts of bandwidth).

> That might be a way to get rid of a lot of hams.

Why do you say that? Are you so set in your ways that YOU
would go away if things changed a bit? I am NOT suggesting
that folks couldn't continue to do what they do now ... just
that MORE is possible, would broaden the audience to
whom amateur radio would have interest, and would provide

many benefits.

> How do you plan to keep interest in ham radio up with that
> "plan"?

Simple ... provide more variety in "services" and more
capabilities in a spectrally efficient manner with less
interference and contention ... make the "product" more
attractive to a larger range of people than it is now ...
have a little vision (and an open mind), man!

> As always, it depends on circumstances.

I have not seen you tell people anything other than "you can switch to CW if the band fails." I am glad you finally recognize that doing so is only one of the possible choices. See, you did learn something from talking with me. :-)

> Why? Seems you find yourself constricted in your thinking just so you can go
>along
>with the code bashers.

Why do you say that? Because I feel that changing frequencies to a band that is open is a better longer-term choice than trying to wring a few more minutes out of a dying band?

> And it certainly is NOT the "only" solution, rather a solution that *is
>instantly at hand* one that comes prepackaged in virtually every
>HF ham rig built, available for use only if hamsknow how to use it.

So does the band switch, and far more hams know how to use the band switch than would be proficient enough in Morse code to be able to get reliable copy under failing conditions.

In real time, right now, a human can beat the best CW decoding algorithms. However, when one can throw lots of processor time at the the problem, the CW decoding schemes can decode signals that most humans cannot even detect.

I think that the processing necessary to decode human voice under such conditions will be a much bigger challenge. The anticipation factor and the ability of a human to put together a big picture from incomplete fragments is not yet understood well enough to be coded.

>ONE MORE TIME........
>
>CW should be available as a last resort, useful
>when whatever better mode you may be lucky enough to have available fails.
>Got it?

It should be, Dick, but it never has been universally available. The number of hams who learned it and never used it, who don't even own a key, or whose skills are so rusty that they can barely copy it under ideal conditions is greater than the number of hams whose CW skills are up to the task of pulling a weak signal out of a failing band.

The old testing scheme did not universally give you what you feel should be available as a last resort, and if I need to depend on something that is available to only a small percentage of hams, I am going to look for something better.

From what I have seen of your conduct here, "certain types of people" sure
covers a lot of people.

A kind and courteous demeanor is self replenishing, Dick. You do not have to be
so frugal with it.

In fact, many people do NOT stay with morse because they just do
not enjoy in any way trying to "pull a weak morse signal out of a failing
band."
There are also those that just are not as naturally capable of
developing the skill to begin with.

Cheers,
Bill K2UNK

I was only talking about spectral efficency (How many Hz of RF
bandwidth does it take to transmit ___ Hz of baseband information?)
Your point about "reading between the lines" is applicable in terms
of effectiveness, but I was only talkng about spectral efficiency.

> The guys
> that are good at it (this wouldn't be me) say this about CW as well,
> actually, and I see no reason to disbelieve that either.

I don't doubt that highly skilled CW ops can copy very weak signals,
but it has been demonstrated that digital techniques can outdo them.

With modulation and coding schemes that are purpose-designed
for machine decoding, you can do even better ...

> About the voice-squeezing thing this must reflect biases derived from

> coding and relatively low-tech modulation.

That's the problem ... the company I work for has some of the leading
speech coding experts in the world ... getting good quality speech at
really low bit rates is a VERY tough nut to crack. And the more you
try the more processing it takes and the more vulnerable to channel
errors you generally become.

> Note that this also
> indicates why I don't think bps/Hz is always the right measure of system

> can provide as much or more efficiency as maximizing bps/Hz.

I see your point ... I'm more a PHY guy than a speech coding guy,
though I've discussed some of the issues in speech coding with
the experts ... given adequate s/n, I can figure ways to push more
bits through a given amount of bandwidth ... the speech coding
guys have a different (and in many ways fundamentally more
difficult) set of problems in reducing the source data rate.

Again we seem to agree ... the idea of "bits is bits" as far as
the medium goes allows one to build different application layers
for new things without having to re-invent the wheel from scratch
at the lower layers ... and, if done right, it allows all of those things,
things that may not have been envisioned yet to fit in with pre-
existing things and "ride along" harmoniously, with the caveat that
they must fit into the available capacity provided by the lower layers.

More folks are investing all the time as they begin to see the wisdom in savings. As for the homes, who will be the beneficiaries of the sales of boomer homes? Think it might be their children? I'm not going to start worrying about what might take place after I die. That'd be like worrying about 6m ops in another country who stray from their authorized band segments.

I'm not sure that I am totally convinced of this ... though I admit to not
being
interested enough to have made an exhaustive study either.

> However, when one can throw lots of processor time at the the problem, the
CW
> decoding schemes can decode signals that most humans cannot even detect.

Of this, there is not doubt ... the point above is that CPUs are
so blazingly fast now, that I'm not convinced that it's not possible
to best the human operator in (at least very near) real time (to the
point where the processing delay would be acceptable.)

Once we start talking about non-Morse encodings, however, the
balance tips rather rapidly in favor of machine decoding.

> I think that the processing necessary to decode human voice under such
> conditions will be a much bigger challenge. The anticipation factor and
the
> ability of a human to put together a big picture from incomplete fragments
is
> not yet understood well enough to be coded.

It sounds like you are maybe talking about some sort of speech to
text decoding ... while that's interesting in some applications, I don't
see it as being that interesting for general communications.

The big issue with speech coding (just to send audio digitally
and reproduce it as audio at the other end) is reducing the number
of bits that need to be transmitted over the channel to get a certain
audio quality ... at really low bit rates, that alone gets to be a tough
nut to crack. Additionally, since fewer bits represent more audio,
each becomes more "important" and more vulnerable to errors
(a bit error causes a bigger chunk of bad audio) ... thus, s/n ratio

and error mitigation techniques become important.

That would seem to be the history of most significant developments. I doubt
that
many of the radio intelligentsia of Armstrong's day could have visualized that
the
main circuit that would give receivers a giant leap forward (the
superheterodyne)
would come not from receivers, but rather from a transmitter - the oscillator.

Hey, Ed, this is Usenet, a subset of the Internet. With the passage of time
one learns
it's features. One of them is that many people read here and become familiar
with those
who post frequently but who themselves never do, and so remain anonymous. Why
should Cecil
-or you- find it so strange that someone posts who is familiar with Cecil, the
numero uno poster
in numbers of posts to this NG? Should Cecil be surprised that Val is familiar
to him, as he
has stated that he has read the NG for a year? Does Cecil -or you- believe that
only those who
have properly introduced themselves to him should be familiar with him? Do You?
Are both
of you daft?

>
> Is this another one of those "I see things that no one else sees" sort of
> things?

For you, it looks like it may be, indeed.

Dick,

I'm sorry that you can't differentiate between a slang term
used to indicate "prodding" or "encouragement" from "forcing."

And I still don't understand why you (or anye else) would "turn in
their license" just because OTHERs make progress ... nobody's
forcing YOU to do it ... I'm just trying to get you to stop working
so darned hard at discouraging OTHERs from doing it ...
Like your many "(fill in the blank with some useful knowledge)
isn't relevant to ham radio" rants.

With reasonable preparation (in the form of a rig that has features
such as defeatable AGC, good IF filtering and decent dynamic range)
plus good operating skills (!) they can be minimized/eliminated.

I'd say it's ridiculous to mix all sorts of digital modes together, saying
that the most popular one doesn't deserve any protection from the others,
but at the same time have protection from voice modes.

I did not invent the "Babel" phrase.

Your comment sounds like a wish.

I see. Guess words like "twits" and "kick in the behind" and "smoking
something funny" are sensitive...

>... then
> YOU come along and advocate a 35% Morse ONLY

What is wrong with advocating such a thing the way I did it? I simply
mentioned it as an idea in this public forum, to stimulate reasonable
discussion. Didn't call anybody an "idiot" or an "olde farte", just
tossed out the idea. I even freely admitted that maybe 35% is too
much.

Good, valid reasons are the only type I give.

Ed ... 1st, please do see if you can get those articles on the website
(at least in the members section).

2nd, I didn't mean in any way to allude that ARRL had voiced
any opposition to ALE techniques ...

3rd ... I still bet that there are more than just a few who will
grumble (at least privately, if not publicly) that "that's not
REAL ham radio" (because a machine is assisting.

Carl - wa6vse

p.s. please let us know if/when/where those articles become
available on the website ...

PACTOR II does something similar now. Although 100% digital data,
PACTOR II has the ability to automatically vary the baud rate and
PSK modulation in order to achieve maximum throughput and reliability.
The data can come from a keyboard or a computer file. One could send
a compressed voice file and listen to it on one's computer but not
in real time yet AFAIK.

And therein lies CW's weakness. Probably 2/3 of coded hams cannot carry on a decent CW QSO anymore. 1/3 don't like CW and 1/3 don't care enough about CW to keep their skill polished. Mix a bunch of hams whose code skills are rusty to nonexistent with an emergency and you have a second disaster in the making. No other mode relies so heavily on labor intensive operator skill.

It doesn't work to test a ham's Morse code in 1960 and then expect him to be able to operate CW under emergency conditions 40 years later. I know you dislike advance planning, but knowing all hams' CW skill level before the emergency is one bit of planning that I think is absolutely necessary. If you wait for the emergency to start operating CW, you may not find many (any?) other hams at your level. I, personally, don't think that I would be of much use in a CW emergency net. I'm still having paddle problems.

You "two" are the only people in the world who have ever called me
"worthless". And his was on his second posting, just a mite too familiar
for him to be a stranger. Just what we need on r.r.a.p - more vulgarity.
I'm not sure the state of Missouri is big enough for both of you, Dick,
and I'm still not convinced that those were not your words that "Val"
posted. Setting up a second identity is not rocket science.

Nope, Dick, you keep missing the point. Please pay attention. It is my
belief that nobody is dumbed down by expending the energy to study for
and pass an amateur radio exam. I believe that a person who doesn't
already know the material is *smartened up* by expending the energy to
study for and pass an amateur radio exam. The only people who are
not smartened up by expending the energy to study for and pass an
amateur radio exam are the ones who already know the material. Anyone
who can rote memorize 1000 questions and answers is a genius and will
be an asset to the ARS.

(Item in [brackets] is a clarifier, I hope.)

>He [Cecil] didn't say that he would be a stranger to Valentine,
>Dick; he said that Valentine would be a stranger to him.

Yes, that would be true. That is, since I put no messages on this newsgroup until quite recently, and have been solely a lurker for quite some time, no one here would know anything about me. The ratio of lurkers to posters is very high on Usenet, VERY high. It can be hundreds, or even thousands, to one, depending on the group. ListServes, even specialized ones, are rarely better than a ten to one "lurker-to-poster" ratio and a UseNet group would nearly always average a much, much lower ratio than that.

>Do you *really* think that people who read this newsgroup but
>never post are not strangers to us? In what way do you know
>them?

You folks are NOT "strangers" to ME. That is, I know a LOT about you all thanks to the hundreds and hundreds of messages that you guys have put up over the last year or so. It was easy for me to "drop in" once I had something to say.

>Is this another one of those "I see things that no one else sees"
>sort of things?

I am beginning to wonder just exactly what you DO see! For instance, you've not commented directly on my views on the current amateur radio tests, which I am studying for right now.

Is that "strange?" Yes, I think it is in that you seem inordinately intersted in CAM's strange ideas about me.

Val

>
>"If the frequencies are available at the stations involved" ... this
>sounds like a matter of proper preparation and planning to me.

Sure - but how much preparation is "proper"? Is two bands enough, or maybe
three or four, or what? How much power?

Many emergencies wipe out commercial power and take out the antennas as well.
Like the
ice storms of '97. And the alternate frequencies may be no better.
>
>> > In fact, with the propagation prediction software available,

OK - how much planning and preparation is adequate? How many
different types of emergency should we prepare for? The last hurricane
to come through EPA and do any significant damage was Floyd in late
1999. How much hurricane preparation is adequate?
>

>
>???? I'm curious what you mean, but don't have any idea

>what it is ...

The old story was that that the mice were being harassed by a cat, and
they developed the idea of tying a bell on the cat's collar so they could
hear the cat coming. Everybody thought it was a great idea, but
nobody would volunteer to actually DO it.

ALE's a great idea for hams, but for it to work somebody has to develop it
and make it available in an inexpensive, easy to use form. Like what was
done with PSK31. Are you volunteering, Carl?

>the fan ...

I agree 100%. But even the best preparations go awry, like having one's
antennas fall down in an emergency. Or you use up the emergency fuel supply
and it's impossible or difficult to get more.

Seems odd to me that things like multiband capability, ALE, propagation
prediction,
and other tools are considered reasonable additions to the toolbox, but Morse
skill isn't. Of course Morse skill isn't guaranteed by testing.

you already know what everyone thinks about your views which
are, strangely enough, identical to Dick's.

Nobody had said that Morse skill isn't useful. Hams are free to add
any of the above items (and more) to their toolbox. There is no
requirement for multiband capability, ALE, propagation prediction
either. What is wrong with live and let live?

>many of the radio intelligentsia of Armstrong's day could have visualized that
the
>main circuit that would give receivers a giant leap forward (the
superheterodyne)
>would come not from receivers, but rather from a transmitter - the
>oscillator.

That's quite incorrect by all the radio history that exists. Oscillators
ALREADY
existed by 1918 and heterodyning ALREADY existed both in theory and
circuitry. Note that the coined word "superheterodyne" comes from heterodyne
with the prefix added to denote a new development as well as a bit of puffery
common in those early days of electronics and multitudinous patent fights.

The common radio receiver was basically a TRF architecture whether it was one
crystal diode, one tube, or multiple tubes in the RF section. Selectivity at
higher frequencies (in those days MF was "high") was already troublesome.
Captain Armstrong (he would not get a promotion to major until after WW1)
uniquely melded several known techniques for the same selectivity over the
entire tuning range of a receiver. That was innovative enough to secure a
patent in the USA, Great Britain, and other countries.

Vacuum tube transmitters were NOT common in 1918, so the terrible reach
to attempt identifying the selectivity solution could NOT have come from
"transmitter circuits." Oscillators were already known, identified, named,
and in use for various purposes as was mixing or heterodyning.

For anyone seriously interested in Automatic Link Establishment
they can look in and download whatever they want from Fed Std
1045A at www.its.bldrdoc.gov/fs-1045a/

That's a link from NTIA. Fed Std 1045A was released on 18 Oct 93,
although much of the work on getting agreement on all the parts of
a rather huge document had been going on for years.

Fed Std 1052 on RF Modems can be downloaded as desired from
www.its.bldrdoc.gov/fs-1052/

In between 1045 and 1052 are a number of other Federal Standards
pertaining to specific techniques in HF communications. There are
links to those, too.

A problem with getting the information directly is that it isn't pre-
digested wtih pretty pictures for the "expert" paddle-twitchers. One
has to actually STUDY (horrors!) the material without any possibility
of a "reward" by another hang-it-on-the-wall credential. :-)

No one made that allusion or attribution. This is another reach of Carroll's,
again incorrect as in his attempt to identify the "key ingredient" of the
Armstrong superheterodyne.

> That might be a way to get rid of a lot of hams.

...only those whose standards and practices were frozen to the old era
of the 1930s where the ARS is defined as the acryonym for "Ancient
Radiotelegraphy Service."

>How do you plan to keep interest in ham radio up with that "plan"?

In the year 2001 fully HALF of all HOUSEHOLDS had Internet access.
Eleven years before that it was zero. Internet connectivity-access has
not stopped growing worldwide in all those eleven years.

It should be rather obvious that the Internet and all it entails has become
so large and useful that Ancient Radiotelegraphy methods and
techniques can only appeal to a small minority of a minority of hobbyists.

No one can promote the future by emphasizing old standards and
practices. "Promotion" by uncivil, sociopathic conduct towards all that
seek improvement is no promotion at all, just uncivil sociopathic conduct.

> environment that they are USED to operating in ...

OK, that's an up-front honest opinion.

But if what you say is true, why do you say that US hams using 'phone
cannot be counted on to behave reasonably but those using digital
modes
can be counted on to do so?

> It is TRUE that most of the world has no sub-band by mode
> restrictions and that it HASN'T caused any real problems.

What constitutes "most of the world" in this context? Most of the land
area,
most governments, where most hams live, where the
active-hams-per-square-mile density is highest, or what?

Dave Heil, K8MN, says the situation is not so rosy in Europe. He's the
most
qualified DXer here that I know of.

How much of the world's active ham population with HF privs beyond QRP
lives outside the USA?
>
> I see it as sort of the ham radio equivalent of the classical
> "ugly American" tourist ....

One of the reasons our 'phone bands were limited in the first place
was to
give foreign 'phones some breathing room where they would not have to
compete with stateside KWs.
>
> > There are at least two other effects:
> >

>
> Give me a break ... WHAT "crowding on the 'phone bands" ???

If there's no crowding, why the ARRL BoD "refarming" initiative? Why
all the
screaming and moaning over "incentive licensing" back in the '60s,
when the
US ham population was less than half what it is today?
>
> Even last weekend with the DX contest, I was able to find space

> to operate in the phone bands without any real problem ...

Which bands? Didja know that 17 and 12 meters are not in the contest?

> I was
> NOT "forced to retreat to where SSB was not allowed" ...

Try 75 meters on a winter night when the MUF is down below 10 MHz.

> "welfare for nonvoice modes" ??? ROTFLMAO!

That's EXACTLY what it is.

If there's no crowding on the 'phone bands now, as you claim, then
why not open up the entire width of all bands to all modes? Do you
think
that doing so would attract more SSB users?

The limitation of 'phone is in some ways like "HOV" or "diamond" lanes
on
freeways that only cars carrying several passengers can use. Having
those
lanes encourages carpooling, which reduces traffic jams, parking
problems,
pollution and fuel wastage.
>
> It's not that the phone bands are so crowded that they can't

> bands if allowed to do so ... THAT is why I don't support
> "phone band expansion."

I don't understand how hams can "share a frequency" using SSB except
for
having bigger roundtables (which is what the AM folks often do).

Let's say I get on 3940 LSB, call CQ and have a QSO with 2 other hams.
We
all have decent rigs, clean signals, etc. Everybody adjusts their
power so
that we're all solid copy but not "bending the meter". Everybody takes
a
turn saying their piece and the conversaton goes on for some time. Our
signals are solid copy over hundreds of thousands of square miles.

How are we supposed to "share" this frequency with others, except for
allowing them to join the roundtable?

> > 4) A precedent is set to allocate spectrum space by criteria other

Incorrect. Voice bandwidths are all the same and the "receivers" used
for
the mode are all pretty much equivalent. Radio is different.
>

That may change in the future.

> how could you POSSIBLY
> construe a "give-away" of 25 kHz of EXCLUSIVE CW
> spectrum as "a 'land grab' for digital"??? THAT's REALLY
> funny!!!

It's very simple:

Suppose there were a 25 kHz CW-only subband on each HF band, down at
the
low end. The digital folks could say that ALL CW should be down there,
not
in the "digital" part of the band.

After all, how much routine digital or CW operation goes on in the
'phone
bands? Practically none, in part because the 'phone ops would scream
bloody murder: "You digital guys have your own part of the band where
we
can't go, why are you coming up here??" The digital folks could say
the
same thing.

In fact, that might be the best argument AGAINST CW-only subbands.
Create them,
and there may be a movement to push ALL CW operation down there. VERY
BAD IDEA!

Interesting.

>
> I'll lobby against phone band expansion with you ... OK???

Depends what you mean by "lobby". I've already let the BoD know there
is
no reason to widen the 'phone bands now. If there is a proposal, I'll

comment against it and urge others to do so.

If you mean joining NCI, forget it! ;-)

Here's another idea:

"Refarm" the bands by occupied bandwidth instead of "mode". Maybe 25%
"narrow"
(defined as less than, say, 250 Hz necessary bandwidth), 25% "medium"
(less than, say, 1000-1500 Hz necessary bandwidth) and 50% "wide"
(meaning wide enough
for SSB, AM and NFM). Toss out all the stuff about "symbol rate" and
"bps" from
the regs - occupied bandwidth is the coin of the realm, so to speak.
If somebody
can come up with a highspeed data mode that takes up 1000 Hz, let them
use it in
the "medium" subband. Same for digital voice, which might be sent
time-dilated.
Narrow modes can go anywhere, same as now.

Think about it.

Sorry, guy, that's lame even by YOUR standards. I'm writing
for the lurkers, who are once again being shown the true lay
of the land -- by what is NOT being responded to.

Also, this surey is an outback of UseNet, repartee-wise,
especially in the qualilty of the trolling, non-responsive
mis-directing posts. You and Mr. Hare sure are trying
to be clever and such but, really, you'll have to step it up
quite a bit, quality-wise, to even reach the UseNet average!

Val Germann
Columbia, Missouri

You sure are reacting just like Dick reacts. Instead of explaining what's wrong with my statement, you just call it lame. If you are not Dick, you sure have been taking lessons from him.

Because we're not talking about "longer-term choice". We're discussing passing
message
traffic when SSB fades and CW will still work.

>

So you go right ahead and switch to 75 meter SSB with all the added storm static
and
see how it works out. As stated, it depends entirely on conditions. If 75 flops,
I'll be

ready to jump right back up to 40 CW. Sorry about all you New Agers. Looks like you may be out of luck.

Big fly in your ointment, Carl. There is now no truly effective way to monitor the Internet for the
purposes of preserving national security, ours or anyone else's. So do you really believe that regulators will ever loosen things up to the point where ham radio will be allowed to
go as far in the same direction? I seriously doubt it. It would only add to the enormous
problem already at hand.

Surely we all know, now, how important national security is. It's a matter of survival.
I hope no ham would advocate placing survival at high risk for the purposes of
"modernizing" ham radio. Would we?

What about ham radio has ever been universal?

> The number of
> hams who learned it and never used it, who don't even own a key, or whose
> skills are so rusty that they can barely copy it under ideal conditions is
> greater than the number of hams whose CW skills are up to the task of pulling a
> weak signal out of a failing band.

That may be, but one the code test always did was to assure that most hams at least

learned the code and were capable of its use. That alone assured that some
significant portion of their number would retain the capability, as evidenced by
long years of its wide use on ham radio when no activity of any sort is mandated.

>
>
> The old testing scheme did not universally give you what you feel should be
> available as a last resort, and if I need to depend on something that is

I dunno, Ed, for a completely voluntary avocational activity where
everything
one does (well, most of us at least) costs instead of paying off, I
think we're keeping up pretty well.

Now that sounds just like an "agin-er" doesn't it? As I stated before, clearly,
some of you guys would rather have NOTHING workable than to admit that
radiotelegraphy is indeed useful as a real, live communications mode.

As for your Ass-ertions, they are no more than uneducated guesses. If you want to see
for yourself
how many hams are able to use CW, just take a good listen to the HF bands when
a CW contest is on. You'll get the surprise of your life. No, I won't be there, I'm not
a
contester.

Ok, so I challenge you to show where I ever called you worthless. If you can I'll
publicly apologize, for I don't believe I ever said that, and never even thought it.

His opinion was formed from reading your postings here, and not from taking
the sort of abuse you have tossed my way -for the singular reason that I still
believe it's worthwhile to require some code testing. What a reason! Do
you really find it so odd that I'd be offended by it all?

> And his was on his second posting, just a mite too familiar
> for him to be a stranger. Just what we need on r.r.a.p - more vulgarity.

Then toss your buddy W5TIT off rrap, and we'll go from there.

>
> I'm not sure the state of Missouri is big enough for both of you, Dick,

It doesn't need to be; as I said, I'm presently far from Missouri, about 1,400 miles

in fact. Haven't been there since November. I have no idea who Valentine Germann
is beyond what he has posted and we all read here. End of story. Read it and weep.

>
> and I'm still not convinced that those were not your words that "Val"
> posted. Setting up a second identity is not rocket science.

First one needs a reason to go to the trouble.....if you think I'd do it for you,
rest easy.
You are far down my list of priorities , and whatever dealings with you I find
needed will be handled right here on rrap.
YOU are the fellow who said he has signed up for a newsfeed service, not me.
Why did you do that, some ulterior motive?

> three or four, or what? How much power?

Whatever it takes ... I can run all bands from 160m to 70cm all
modes (even CW ... though I'm admittedly way out of practice
and would NOT even attempt to use it when better means are
readily available). I don't have (and don't envision needing)
an amplifier ... I can run from QRP to 100W ... I don't HAVE
to talk to the other side of the world ... just outside of (or into
an adjoining) disaster area ... or within the disaster area ...
it's not like I'm going to need to talk to Vanawatu to help in
an Eastern PA disaster ... and if the disaster is in Vanawatu,
there will be people better positioned to help them than me
here in Eastern PA ...

> Many emergencies wipe out commercial power

I don't need commercial power ... all of my gear can be run
from 12VDC ... I have large, deep-cycle batteries and the
means to charge them without commercial power (it's called
vehicles, and gas to run them) This is part of being properly
and adequately prepared.

> and take out the antennas as well.
> Like the ice storms of '97.

I can (and have) strung antennas in the dark in freezing
rain, sleet, and snow ... no big deal ... if they come down, put
new ones up. (Having a decent spool of suitable wire ... and
other suitable replacements and backup gear ... is also part
of being properly and adequately prepared)

> And the alternate frequencies may be no better.

Come on ... with 160m to 70cm to work with, I can find
a workable frequency for virtually anything without resorting
to having to fall back on CW as a "last resort." And there
are always relays in case of "skip zones."

> Agreed! That's one of the skills on my list.

You equate operator skill and experience with CW proficiency.
I place far more value on things that I know to be more useful
and important.

[snipped another attempt to completely discount the possibility
that propagation predictions just might be useful]

> >> > Another thing which would be very useful for disaster

> to come through EPA and do any significant damage was Floyd in late
> 1999. How much hurricane preparation is adequate?

However much it takes to have a reasonable assurance that
stations can be fielded to provide communications ... that means
backups of gear, power sources, antennas, and operators.

It's sort of like the old joke about the guy who asked "How do
I get to Carnegie Hall?" and the guy answered "Practice, practice,
practice." You have to plan, prepare, and practice if you're going
to be effective ... you can't just say "I know Morse." and think
that's going to get the job done ... as someone (was it Ed or
maybe Cecil?) pointed out ... the majority of the ops you'll contact

out there (outside of the disaster area) are probably not competent
to handle real traffic in Morse ...

> ALE's a great idea for hams, but for it to work somebody has to develop it
> and make it available in an inexpensive, easy to use form. Like what was
> done with PSK31. Are you volunteering, Carl?

While I can write code in a several different programming languages,
I'm more of a system architect/hardware designer sort of guy ... I'm
sure that there are more competent programmers who could do a
better job of this task than me ... but I'd be willing to collaborate with
someone on the systems aspects and the hardware/software interface
and integration ...

> >> Actually, the tradition is to make it work.

Making it work is about being prepared to make it work WELL,
not waiting for all hell to break loose, then hoping that "Morse
will save the day."

> >>
> >> The problem is having all of this stuff available and working when
needed,
> >> with people who know how to use it.

Like Dick ... you seem to have a fundamental hangup about
doing the basic planning and preparation ...

> >There we are back to proper planning and preparation ... instead
> >of relying on throwing something together willy-nilly after it's hit
> >the fan ...
>
> I agree 100%. But even the best preparations go awry, like having one's
> antennas fall down in an emergency.

As I said, if the antennas come down, you put new ones up (you
did plan ahead and have extra wire, coax, etc. on hand, right?)

> Or you use up the emergency fuel supply
> and it's impossible or difficult to get more.

If you run out of power, you didn't plan adequately. Period.

I could keep my radios going for weeks without commercial
power ... 'course I'd be eating canned foods and making
coffee over a wood fire, but I'd still have enough eat and I'd
still be on the air.

> Seems odd to me that things like multiband capability,
> ALE, propagation prediction, and other tools are considered
> reasonable additions to the toolbox, but Morse
> skill isn't. Of course Morse skill isn't guaranteed by testing.

Bingo ... that's why I am unwilling to rely on Morse skill as
the "backbone" or "fall-back" position ... it's the weakest
link in the chain ... and not the most effective mode for the
type of communications required.

If you want to have fun with it, fine ... but don't bet the farm
on it when "it hits the fan" ... cover that bet with good planning
and preparedness and backup gear and supplies and you can
more easily and effectively use better modes.

Not everyone has to have everything explained in detail for them. As
for you,
it's a matter of you wanting it all in the most detailed form merely
so that you
can pick it apart with changes of context, manipulations of meaning,
generalized
"logical" trolling, and if all that fails, you can always
"dictionaryize" it to death.
If Webster's won't do it, there's always the IEEE job.

> smiley face on your postings.

I don't, and never did, blame anyone for not wanting to have to pass a
code test
to get a ham radio license. I didn't either. But sit, whining and howling
about it for decades, is
truly unconscionable when one could just do it.

Now that the maximum code test speed is 5wpm, truly no one is being even
seriously
inconvenienced by any code test. Why you insist on being obtuse only you
can say

Meanwhile it appears, from listening to the CW bands, that there is indeed
an significant element newcomers who have found enough interest in CW to
use it on the air, and
to gain skill. When they no longer have to learn it to even 5wpm it is most
unlikely
they would ever even give it a try.

Len,

Thanks for posting the links ... perhaps someone else will
study the Fed Stds and learn something ... maybe even
write an amateur implementation for use with the more
popular computer-controllable radios (if you do, please
document the API for the interface to the radios well ...).

I'd still like to see the articles that Ed mentioned, though,
to see how the subject was treated in QST/QEX ...

Big lack of intelligent content in your response, Dick ... first,
I think you'd be surprised at how sophisticated some of
the 3-letter agencies might be at snooping on the internet ...
second, what makes you think that ham radio NOW is any
easier (or harder) to snoop on than the internet???

"Secret messages" can be hidden in seemingly innocent
plain language messages ...

Your entire paragraph above is nothing more than a touch
of "huff and puff" mixed with a LOT of pure, senseless
babbling ...

> Surely we all know, now, how important national security
> is. It's a matter of survival.

Yes, it's a serious matter ... one so serious that you should
not stoop so low as to attempt to capitalize on it to forward
your Morse-centric distortion of the world through senseless,
baseless insinuations that somehow modernizing ham radio
would "compromise national security."

My God, man ... get a life and wake up ... there's a real world
out here and it doesn't revolve around, or depend on, your
Morse-centric fantasy land of the 1940's and 50's ...

> I hope no ham would advocate placing survival at high
> risk for the purposes of "modernizing" ham radio. Would we?

Your assertion that such is in any way the case borders on
the obscene, given the events of Sept. 11th, the serious
nature of national security, and the fact that modernizing ham
radio could CONTRIBUTE to the national security, rather
than, as you baselessly allege "compromise" it.

I've been told that at times I can be brutally honest :-) I'm
pretty much a "tell it like I see it" sort of guy most of the
time, in case you haven't noticed ... of course, sometimes
it aggrevates folks, but at least they know where I stand.

> But if what you say is true, why do you say that US hams using 'phone
> cannot be counted on to behave reasonably but those using digital
> modes can be counted on to do so?

I guess because my experience has been that people who
are capable of understanding the benefits of digital modes
also understand that they're better off where they're mpt
"banging heads" with the voice ops ... (politically and out
of courtesy, more than in terms of competing for the use of
a frequency, since most digital modes are VERY patient
and persistent and will usually get through eventually even
when someone intentionally tries to casually jam them)

> What constitutes "most of the world" in this context? Most of the land
> area,

> most governments, where most hams live, where the
> active-hams-per-square-mile density is highest, or what?

Most of the governments or "regulatory domains" if you will ...

> Dave Heil, K8MN, says the situation is not so rosy in Europe. He's the
> most qualified DXer here that I know of.

I'm sorry ... I think Dave is a pompus jerk and I don't trust or
value his opinion on much of anything ... (there, I was brutally
honest again ... but in fairness, I'm sure Dave thinks I'm a jerk,
too ...)

> How much of the world's active ham population with HF privs beyond QRP
> lives outside the USA?

I don't know the exact numbers, but it's a sizable population ...

> > Give me a break ... WHAT "crowding on the 'phone bands" ???
>
> If there's no crowding, why the ARRL BoD "refarming" initiative?

I agree completely "Why the ARRL BoD 'refarming' initiative?"
I think it's a stupid, ill-advised idea aimed at pandering to the
SSB-only crowd.

> > Even last weekend with the DX contest, I was able to find space
> > to operate in the phone bands without any real problem ...
>
> Which bands? Didja know that 17 and 12 meters are not in the contest?

I wasn't counting the WARC bands ... just 80/40/40/15/10 ...

> So any digital mode that doesn't do so is to be banned? What about
> PACTOR mailboxes and such?

Read my letter on that subject in QST ... I forget which issue.

>
> Incorrect. Voice bandwidths are all the same and the "receivers" used
> for the mode are all pretty much equivalent. Radio is different.

OK ... I'm the receiver ... I hear energy in my passband above
some reasonable threshold. I inhibit the transmitter. I didn't have
to decode the energy ... just recognize its presence. This is
done all the time.

> Here's another idea:
>
> "Refarm" the bands by occupied bandwidth instead of "mode". Maybe 25%
> "narrow"
> (defined as less than, say, 250 Hz necessary bandwidth), 25% "medium"
> (less than, say, 1000-1500 Hz necessary bandwidth) and 50% "wide"
> (meaning wide enough for SSB, AM and NFM).

Not a totally horrible idea if you HAVE to balkanize things ... but
on the other hand, it's still more rigid, stifling, and less efficient
than completely dynamic frequency allocation.

> Toss out all the stuff about "symbol rate" and "bps" from the regs

I'll buy that ... those things are VERY limiting and unnecessary.

> occupied bandwidth is the coin of the realm, so to speak.

Bits/sec/Hz and Eb/No are my preferred metrics of "goodness."

> Narrow modes can go anywhere, same as now.

Why this sudden reversion to preferential treatment for modes
just because they're narrow ... they could be narrow simply
because they're slow and inefficient (like OOK Morse :-)

You claimed to know something of DX, that's all. Maybe you just have a lot
of time on your hands and can afford to waste it listening in parts of the
band where they're not supposed to be. Smart DXers spend their time
listening to the parts of the band where the DX is supposed to be (i.e.,
authorized).

You raced to correct your earlier statement and in the correction used
both the words "encouragment" and "prodding" as in:

"Dick's approach WRT CW is more like a cattle prod ...
(or should that be a "sheep prod" ??? :-)"

As to what "the masses" need, Carl: It is my view that you are one of
the masses.

I think I'm beginning to understand your way of thinking. We should lead in marketing the migration away from archaic, legacy modes and toward a free market of modes which will mark the paradigm shift into the high speed wireless world of the future. In doing this, we should feel free to retain abilities in the use of some archaic, legacy modes so that they may be placed in our communications toolbox. Is that about it?

I couldn't fit the "live and let live" thing into the philosophy anywhere.

I can't help but feel that your use of a "smiley" doesn't really indicate humor. You've used the occasion to take another swipe at the ARRL and at mere radio amateurs.

You have illustrated that while California does not have a monopoly on flakes, it certainly has a surplus. Good luck with that 5 wpm.

Did one of 'em tell you that, Brian? You haven't provided one single
item in my quest to become a better DXer--unless it would be your
suggestion to memorize each authorized band allocation for each of the
world's DX entities. I'd say the smart guys know where to find the
information if it is needed.

That can be the only logical step after working stations when they show up (which you claim "works for a while"). Tell us, what do you do?

I understand that you made a mistake. You thought perhaps that you'd bowl me over with questions on what can be done to promote local activity in rare DX spots. I provided information on what had been tried in some of those countries. Remember, you indicated concern. Now you say you don't intend to do anything to alleviate that concern. Why all the noise then?

The word is "pompous". I don't think you're a jerk, Carl. I think you
are clumsy and arrogant in dealing with human beings. Can you say
"archaic legacy modes" three times, very rapidly? Okay, now try
"beeping real fast".

> > How much of the world's active ham population with HF privs beyond QRP

There's an example of Carl being brutally honest...

What you call "brutally honest", others may describe as a complete lack
of interpersonal skills.

> > > Even last weekend with the DX contest, I was able to find space
> > > to operate in the phone bands without any real problem ...
> >
> > Which bands? Didja know that 17 and 12 meters are not in the contest?

>
> I wasn't counting the WARC bands ... just 80/40/40/15/10 ...

They're HF bands, Carl. Why wouldn't you count them? You could've even dazzled 'em with digital modes or CW on 30m.

> > So any digital mode that doesn't do so is to be banned? What about
> > PACTOR mailboxes and such?

> Not a totally horrible idea if you HAVE to balkanize things ... but
> on the other hand, it's still more rigid, stifling, and less efficient
> than completely dynamic frequency allocation.

You should try 40m from Europe (they no longer balkanize in the Balkans) or Africa. On any weeknight, SSB signals crowd the CW and digital mode users (bandplans exist but are ignored by many). Now let's listen on an SSB contest weekend where there is nowhere for a casual CW QSO to take place. The situation reverses itself during a CW contest weekend. Your dynamic frequency allocation goes *poof*. Dynamic frequency allocation is much like communism--nice theory but it doesn't work.

> Why this sudden reversion to preferential treatment for modes
> just because they're narrow ... they could be narrow simply
> because they're slow and inefficient (like OOK Morse :-)

Speed of throughput is not an indicator of the value of a mode.

>But if what you say is true, why do you say that US hams using 'phone
>cannot be counted on to behave reasonably but those using digital
>modes
>can be counted on to do so?

I don't see lots of evidence that either will behave badly. How well do the phone and image people on HF manage to stay out of each others' way? How well do they manage to stay out of the way of other ops using the same mode? How about the CW and digital ops on that part of the band?

>Dave Heil, K8MN, says the situation is not so rosy in Europe. He's the
>most
>qualified DXer here that I know of.

Most of the QRM I have received while operating CW has come from other CW ops. That isn't so rosy, either.

>> Give me a break ... WHAT "crowding on the 'phone bands" ???

>If there's no crowding, why the ARRL BoD "refarming" initiative?

To address underuseage?

>> ROTFLMAO!!!!!!!!!! All digital modes, including CW, are
>> presently on an equal footing ...

>That may change in the future.

In what direction? The FCC has been leaning toward less regulation by mode and sub-band, not more.

>Suppose there were a 25 kHz CW-only subband on each HF band, down at
>the
>low end. The digital folks could say that ALL CW should be down there,
>not
>in the "digital" part of the band.

They could say that, but what would the rules say? If you are saying that there does not need to be such a CW-only setaside, I agree.

>After all, how much routine digital or CW operation goes on in the
>'phone bands?

Non-voice digital operation is not permitted in the phone/image bands. I think I have used CW in the phone bands on about two separate occasions in my life, in one case due to a microphone failure and another due to (is Dick ready for this one?) the fact that copy on SSB from my mobile setup was just too weak.

It was a cross mode QSO, with the other op staying on CW.

>In fact, that might be the best argument AGAINST CW-only subbands.
>Create them,
>and there may be a movement to push ALL CW operation down there. VERY
>BAD IDEA!

If it is a bad idea for one mode, why is not a bad idea for all modes?

Good Grief, sir. You speak of petty squabbling over words only one paragraph after a new extrapolation of the amateurs code by you.

And to try to turn this into a free speech issue is quite absurd.

A good discussion is always fun, and evenwide divergences in opinion can be expressed if the participants are civil about it.

But I can see that you are mainly interested in "winning" the argument, and are willing to go to some humorous extremes to do so.

But it serves no purpose.

Submitted for your approval....

Here's a list of desireable radio operator skills for hams.

Operator Skills

1) The skill to speak clearly, concisely and distinctly, at a steady rate, level and tone.
2) The skill to listen carefully and understand a transmission under both good and poor conditions.
3) The skill to judge radio conditions on a given frequency and how they are changing.
4) The skill to determine the mode of a received signal by ear or other means.
5) The skill to properly tune in a signal for best reception.
6) The skill to tune up and operate transmitters so as to maximize effectiveness and minimize interference.
7) The skill to correctly judge the radio conditions over a given path and adjust transmissions for best results.
8) The skill to correctly judge the skills of other operators and adjust transmissions for best results.
9) The skill to communicate effectively in less than optimum settings (heat, cold, lack of sleep, etc.)
10) The skill to communicate effectively under less than optimum radio conditions.
11) The skill to communicate effectively with less than optimum equipment.
12) The skill to use the standard phonetic alphabet smoothly and effectively, and judge when its use is needed.
13) The skill to use appropriate abbreviations and prosigns, and judge when they are needed.
14) The skill to write down received transmissions legibly and neatly so that others can easily read them.
15) The skill to write clear, coherent formal messages in standard form.
16) The skill to type, error free, at a rate that makes best use of the transmission mode.
17) The skill to deal with hostile and/or illegally operated stations.
18) The skill to do several things at once while on the air.
19) The skill to have situational awareness in all operating situations.
20) The skill to project a welcoming, friendly and helpful attitude on the air.

Not if they have other modes avaialble.

What percentage of hams do you think can use packet, PSK31, PACTOR, or any
of the other data modes? In a given bunch of hams, how many do you think will
be able to communicate using the same digital mode?

>No other mode relies so heavily on labor intensive operator skill.

Voice is more work for me than Morse.

>It doesn't work to test a ham's Morse code in 1960 and then expect him to be
>able to operate CW under emergency conditions 40 years later.

It doesn't work to test a ham's skill or knowledge of anything and then expect
it
to be useful X years later without practice. There are plenty of hams
who think they are "emergency prepared" who couldn't make a simple 80 meter
dipole without detailed instructions even if you gave them all the tools and
materials.

>there will be people better positioned to help them than me
>here in Eastern PA ...

Power is not always needed for DX - and QRP is not always effective for
local communications. There may be times when getting through requires
more than 100W.

All depends on the situation. How usable will a makeshift wire antenna
be on VHF/UHF if the repeaters in your area fail?

> And there
>are always relays in case of "skip zones."

If there are stations available to do that job. Relay - nets - starting to
sound like NTS - lots of good ideas.

>> > if it's not available, fine ... that's where operator
>> >knowledge and experience come in ...
>>
>> Agreed! That's one of the skills on my list.
>
>You equate operator skill and experience with CW proficiency.

CW proficiency is actually a whole set of skills, not one skill. But I do
not equate operator skill and experience solely with CW skills.

IOW, CW skills are a subset of operator skill and experience.

In fact, several years back I worked up a whole list of operating skills
every ham should strive to have. I posted it here - I can dig it up again
if you'd like. You might like it.

>I place far more value on things that I know to be more useful
>and important.

I know that CW skill is useful and important. Not all-important, of course.
Just another tool in the toolbox.

Preparation is always a good idea.

But I note that you try very hard to deny Morse ANY role, and use
phrases like "better modes".

My expereience is that for many purposes Morse is a better mode than
SSB voice, given operators with decent Morse skills.

> cheers, CAM, W5DXP

Let me add my voice of agreement that if a ham wants to
"add morse skill and capability" to his/her ham operation,
that's fine with me. The issue isn't to do so or not, the issue
is still the test requirement. As Cecil notes, there's NO requirement
for a ham to have ANY capability.

Cheers,
Bill K2UNK

>paragraph after a new extrapolation of the amateurs code by you.

Not a "new extrapolation" but a repeat of the original.

> And to try to turn this into a free speech issue is quite absurd.

I've never found any absurdity in guaranteed free speech. Have you?

> A good discussion is always fun, and evenwide divergences in opinion
>can be expressed if the participants are civil about it.

Then look back at your own interjections. Hardly "fun" in attempting
ridicule.

> But I can see that you are mainly interested in "winning" the argument,
>and are willing to go to some humorous extremes to do so.

Since I had already proved the point without a shadow of a doubt,
you had NO chance of "winning" your point. You didn't have a
chance so your only hope was diversion and misdirection. That
didn't work either.

> But it serves no purpose.

Sorry, but it does. It proves the shallowness of some opinions
that rely on myth...and some brainwashing by a large organization.

Now if you want some examples of "civility" and bone-deep "humer,"
take a look at the output of the Dynamic Duo, Ratman and Wobblin.

One became the ONLY ham station in an important, vital nation
on a great continent courtesy of another federal Department. The
other one doesn't seem to hold his liquor or anything else back.

Fun guys, right? :-)

CAM wrote :

>You "two" [Mr. Carroll and myself] are the only people
>in the world who have ever called me "worthless".

I find that hard to believe [:-)] but no matter. I should
not have called you "worthless" and I apologize for that
usage. What I should have said is that I had found your
UseNet postings to this newsgroup "worthless," and
had gleaned that this general view was shared by
Mr. Carroll, who has never, to my knowledge, called you,
yourself, "worthless." Sorry about my hyperbole.

However, I must say it's a rather minor offense compared
to what else has been going on around here of late!

Val Germann
Columbia, Missouri

P.S. In general, when someone makes unwarranted
accusations of the type "CAM" has made about
Mr. Carroll (setting up a second, hidden, identity) it's
usually because they have done so themselves or
are thinking about doing it. It's called "projection"
and it could well apply in this particular case. That
is, "CAM" could well be "projecting" his own evil
plans and intent onto his "enemy." Happens all the
time, especially on UseNet!

You code haters just won't get off that nonsense, will you? NO ONE EVER SAID that
morse would likely save the day. It's another tool to use, one that can be useful when
other more convenient and possibly more efficient modes are either not working or not
even available. If it saves the day then the day would have been lost without it because
no other mode was available to use for the purpose. You and the rest of the codehaters
are simply dishonest, and that's about the most generous way it can be said.

ME get a life??? Finally YOU have been handed something resembling one,
after a
quarter century of bitching and
bellyaching, and ..... just how full of crap are you capable of
becoming before your eyes turn brown and your hair is pushed by the
roots?
For your information, I'll repeat it for at least the 23rd time- CW
isn't even my 'favorite'
mode! Last CW contact I made was over a month ago. And what do you
suppose I've been doing in the meantime? Could possibly be doing ahem,
digital mode, PSK31, Hellschrieber,
RTTY, even some MFSK. And what are YOU doing, catching up on your SSB
rachetjawing? Just so you'll know, I don't even know where my microphone
is.

So now who is the retro? I'm quite satisfied to let the readers decide.

>
> > I hope no ham would advocate placing survival at high

So you really believe that there are 230,000 hams on CW during a contest? That's
how many there would have to be for my "uneducated guesses" to be wrong.

Before PSK31 was available on PC's it was available on a Motorola DSP
eval board which cost money. That's what I meant. At first, the hardware
wasn't free in the sense that one had to purchase a piece of hardware
that one probably didn't already have.

After September 11, I think not.
It was learned in the caves of Afghanistan that
the terrorists were using the internet to communicate. NSA evidently didn't
know, or do you prefer to think they just ignored it all and let September
11 happen?

He, Cecil, I hate to tell you but at those times there either IS NO rational response since
the "question" was nothing but pure troll anyway, or the question was just too off the wall
to even bounce. Somehow you have come to think of yourself as the Leader of RRAP, the only soul present here with any intelligence. Sorry to burst your bubble, but it just ain't so.

Another gratuitous swipe from the Putz who decries gratuitous swipes.

Started off with good info...Not Amateur Radio policy, but radio stuff
none-the-less. Then you screw it up (as if we expected something else?) and
act like a twit.

Whatta Putz.

> one on a visit to the US)

Extremely accurate! While Mexico is not my forte, other South American countries (...and some in the Carribean basin) will quite literally issue an amateur radio license in exchange for a crisp "leaf of lettuce."

Trying to do it the "right" way can be troublesome...but is better for both conscience and piece of mind. Good luck sir.

904. Comments on Jim's list of "desirable skills for hams"

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-09 14:45:17 UTC
From: "Carl R. Stevenson" <wa6vse-shack@fast.net>
Message-ID: <3c8a2861_1@news7.fast.net>
Source record: 36953

"N2EY" <n2ey@aol.com> wrote in message
news:20020308225725.12293.00000079@mb-cs.aol.com...
> Submitted for your approval....
>
> Here's a list of desireable radio operator skills for hams.

Sorry, Jim ... while I *agree* that most of these are
useful attributes for an operator, I think that MOST of
them can't be tested ... nor would a "time in grade"
experience requirement for advancement provide
any assurance that the "skill" had been acquired.

Additionally, I don't think you can have an exhaustive
"one size fits all" list without unnecessarily discriminating
against people who don't fit your "cookie cutter" image
of "the perfect operator" ... for example, people with
disabilities.

Since ham radio is, in part, about "self-education,"
I still think it best to keep the license qualifications
limited to rules/regs/practices and the necessary,
basic technical knowledge necessary to meet the
government's legitimate regulatory interests (which
include electrical and RF safety for the operator and
others and recognizing/avoiding/mitigating interference
problems).

Most of the stuff you list below is/can be learned by
doing ... the license allows one to do ... get it?

> Operator Skills
>
> 1) The skill to speak clearly, concisely and distinctly, at a steady rate,
> level and tone.

This would discrminate against people with speech problems ... who
could be perfectly good CW/Digital operators without anyone even
knowing that they had a speech problem.

> 2) The skill to listen carefully and understand a transmission under both
good
> and poor conditions.

This would discrminate against people with hearing problems ... who
could be perfectly good Digital operators without anyone even
knowing that they had a hearing problem.

> 3) The skill to judge radio conditions on a given frequency and how they
are
> changing.

Useful ... but how do you test it?

> 4) The skill to determine the mode of a received signal by ear or other
means.

Useful ... again, how do you test it (other than the "by ear" part,
using tapes ... probably impractical at a VE session and leaves
out the "other means" which are just as valid IMO.

> 5) The skill to properly tune in a signal for best reception.

Clearly useful, but how do you test it practically at a VE session?

> 6) The skill to tune up and operate transmitters so as to maximize
> effectiveness and minimize interference.

Clearly useful, but how do you test it practically at a VE session?

> 7) The skill to correctly judge the radio conditions over a given path and
> adjust transmissions for best results.

Clearly useful, but how do you test it practically at a VE session?

> 8) The skill to correctly judge the skills of other operators and adjust
> transmissions for best results.

Clearly useful, but how do you test it practically at a VE session?

> 9) The skill to communicate effectively in less than optimum settings
(heat,
> cold, lack of sleep, etc.)

This is starting to sound like a "How do we make the qualifications so
absurd that nobody will want to bother?" item ... I think that most hams,
in an emergency situation will "Do what needs doing." To suggest that
this is even measurable, let alone testable, is a BIG stretch ... what
would you do? Torture people to see how much heat, cold, sleep
deprivation, etc. they could/would tolerate before saying "Uncle!" ?
At what level of torture tolerance would YOU deem an applicant "worthy"
of being granted an amateur license?

> 10) The skill to communicate effectively under less than optimum radio
> conditions.

Clearly useful, but how do you test it practically at a VE session?

> 11) The skill to communicate effectively with less than optimum equipment.

Useful, but again, with proper planning and preparation, good, working
equipment, antennas, etc. should be available and there should be no
need to rely on "minimalist radio" techniques.

> 12) The skill to use the standard phonetic alphabet smoothly and
effectively,
> and judge when its use is needed.

Clearly useful, but how do you test it practically at a VE session?

> 13) The skill to use appropriate abbreviations and prosigns, and judge
when
> they are needed.

This seems more oriented towards Morse operation than a general
requirement that needs to be applied to all.

> 14) The skill to write down received transmissions legibly and neatly so
that
> others can easily read them.

What about typing? What about those with handicaps ... would you deny
them licenses on the basis of not being able to write "legibly and neatly"?
Who's the judge of what's "legible and neat"? You? My 1st grade teacher
(rest her soul)? Some elite corps of "handwriting police"?

> 15) The skill to write clear, coherent formal messages in standard form.

What about typing? What about those with handicaps ... would you deny
them licenses on the basis of not being able to write "legibly and neatly"?
Who's the judge of what's "legible and neat"? You? My 1st grade teacher
(rest her soul)? Some elite corps of "handwriting police"?

The emphasis of this item on "formal message" seems to indicate
the "radiogram" format ... something that's hardly ever used in REAL
emergency communications ... for H&W traffic, e-mail formats would
be more efficient and more commonly recognized ... in fact, once
the message gets out of the disaster area, in many cases e-mail
delivery would be the most efficient means of delivery. (Yes, I know,
to some using anything but "pure ham radio" is sacreligious, but all
I care about is what works best when it comes to emergency comms.)

> 16) The skill to type, error free, at a rate that makes best use of the
> transmission mode.

A usefull skill no doubt ... but really a stretch if you're about to
suggest that it should be a license requirement.

> 17) The skill to deal with hostile and/or illegally operated stations.

A useful skill no doubt ... but really a stretch if you're about to
suggest that it should be a license requirement. How would you
test this in a VE session? Who would decide what was pass
and what was fail?

> 18) The skill to do several things at once while on the air.

A useful skill no doubt ... but really a stretch if you're about to
suggest that it should be a license requirement. How would you
test this in a VE session? Who would decide what was pass

and what was fail?

> 19) The skill to have situational awareness in all operating situations.

This sounds like it boils down to "Watch your back." ... for example,
"Make sure the brush fire doesn't surround you.", or "Don't set up
your station in/near a building that's likely to collapse in an aftershock."

How would you test this?

Are you trying to put the "Darwin Awards" out of business? :-)

> 20) The skill to project a welcoming, friendly and helpful attitude on the
air.

A useful attribute not doubt. How would you test this in a VE session?
Who would decide what was pass and what was fail?

Also, how would you propose to purge all of the existing ops who
couldn't "cut the mustard" according your "cookie-cutter" standards,
assuming that you could develop a means to practically test all of
this (and were made the "standards police" so that you could enforce
it) ??? Or would old timers be 'inherently OK' even if they did not
meet all of these standards?

Hello, all!

Certain things are pretty much obvious from inspection,
it seems to me. I haven't done a literature search on
"academic cheating" but what the Ham Tests have now
is what frat houses KILL for on college campuses: THE
BOOK on a particular class! That is, in a standard
academic setting, if the questions and answers are
published, in the EXACT form that they will appear
on the test, well, someone is CHEATING, big time!
And, at least for me, it is plain fact that should such
material become available then students WILL use
it -- in whatever way they can!

Some people, perhaps "many" people, will do almost
ANYTHING rather than truly learn the material.

I can speak from experience on THAT one!

I'm glad we agree ... I should also point out that I have more
than one rig that's capable of covering all of that, plus a couple
of 2m/70cm FM dual-banders as well (plus a decent scanner
and general coverage receiver for monitoring other services).

> > I don't have (and don't envision needing)
> >an amplifier ...
>
> There may be times when an amplifier is needed.

Not from my experience ... I've never found it essential
to have more than 100W to be able to make a contact
outside of the area, or anywhere inside the surrounding
area (for example the area my ARES/RACES group would
cover or respond into to support adjacent units).

> >I can run from QRP to 100W ... I don't HAVE

I have a PD-220 "SuperStationmaster" on 2m ... used to use
them in in commercial installations on mountaintops ... seen
them take 6" of iceload and 100mph wind and not come down.
With my location on the exact top of the highest hill in the area,
I can BE the repeater ... from here, I've talked (simplex) to
mobiles 50-60 miles away with a 5W HT and rubber duckie.
(I planned ahead for ham radio when I bought this place ...)

> > And there
> >are always relays in case of "skip zones."
>
> If there are stations available to do that job. Relay - nets - starting to
> sound like NTS - lots of good ideas.

I never said that relays were "bad" ... better if you don't
need them, but workable if you do.

I never said nets were bad ... I used to be NCS on ARES fire
nets in So Cal a LOT ... wish I could spend as many days/nights
diving in Cozumel as I've spent on ARES nets over the past
25 years.

>
> IOW, CW skills are a subset of operator skill and experience.

But you ALWAYS make sure to emphasize that "CW skills MUST
be there" ... that is the error ... they can be useful under some
situations (but most of the time using CW is a matter of operator
choice/preference, NOT necessity by any means), but they are
not NECESSARY ... planning and preparation are FAR more
important in emergency communications.

> In fact, several years back I worked up a whole list of operating skills

>
> Sadly true.

Sad to you ... totally inconseqential to me ... I prefer to plan
and prepare adequately to be in a position to use better,
more effective modes for the task.

> However, it seems to me that you are taking great pains to keep Morse out
> of the toolbox.

Not exactly ... I'm like Cecil ... live and let live ... freemarket of
modes.
If you want to spend the time becoming really good at Morse, be my
guest ... I'm not the least bit interested and would not, therefore, waste
my time doing so ... does that mean I want to stop you? No! Does
that mean that I want to "take something away from you"? No!

ALL it means is that I am convinced that Morse is no longer the
best means of conducting emergency comunications for a number
of reasons and I encourage others to plan and be prepared, rather
than hoping that (the) Morse (that they learned 20-30 years ago
and haven't remained proficient at) will somehow magically save
their bacon when it hits the fan.

I think that's good, sound advice.

As far as using emergency communications "needs" as a
"justification" for keeping Morse testing .... that's a bunch of

trumped-up hogwash ... for all of the reasons I've elaborated
in many replies to you and others.

Enjoy it if you do ... but don't create fantasy-world inventions
in order to try to keep forcing Morse on everyone through
regulatory requirements.

Hello, all!

What you say is all well and good. HOWEVER, an "A"
from Central Missouri State University is NOT the same
thing as an "A" from Harvard, though both are quite
"authoritative" in their own way. Taking tests over
complicated material, "blind," in what amounts to a
true academic setting, is VASTLY more difficult than
what is going on today vis-a-vis the Ham Tests.

This is REGARDLESS of the fact that an Extra-class
test passed today is just as "authoritative" as one
passed years ago. That is, both may be equal before
the rulebook but HARDLY EQUAL as social facts.

Surely, this is too obvious to require further elucidation?

Val Germann
Columbia, Missouri

Yes, knowing where to listen would benefit you quest for DXCC. Sorry if its
not a big enough boost, but you need to take things in steps. As far as
smart guys go, I wasn't the one working out of band French stations on 6m,
and I do know where to find the information when needed. Remember, I'm the
one who provided it to you.

And you're the one using the word, "memorize." I haven't used it, so don't
pull a Cecil on me.

Dave, it all depends on where you're listening. If you're not listening where they show up, then opportunity missed. If you're listening where they show up, then that works, for a while. You must have a magic radio that can listen to all 2 megahertz of 160M or all 4 megahertz of 6M, simultaneously. The rest of us have to tune around and while we're on this side of the band we can't be listening to that side of the band. Then an awareness of the target DX frequency authorizations would be useful in closing out the last few contacts for DXCC. Memorize if you must, or slide a cheat sheet under the plexiglass. That's all.

> Guaranteed, you won't win this one.

From the ARRL:

"NEWINGTON, CT, Jan 31, 2002--President George W. Bush spoke
today via Amateur Radio to members of the Northern Florida Amateur
Radio Emergency Service Net (NFAN). The president was in Florida
to spotlight five volunteer groups--among them the Volusia County
Amateur Radio Emergency Service (ARES)--for their value to the new
Office of Homeland Security."

Note the last phrase Dick ... "for their value to the new Office of
Homeland Security."

Clearly, the government is viewing amateur radio as a valuable,
even vital, asset in terms of national security ...

You'd already lost your bet before you made it, Dick ...

Perhaps you should not bet on or spout off about things
that you obviously know little or nothing about.
('course I'm afraid that will seriously restrict your available
topics for conversation :-)

Carl - wa6vse

Duuuuhhhhhhh Dick, when you say there are 23,000 hams on the air during a contest weekend and 90% of CW qualified hams don't care for contesting, you are accepting my guesstimate of 230,000 CW qualified hams which is 1/3 of all hams.

You are agreeing that 230,000 CW fluent hams, 230,000 CW non fluent hams, and 230,000 hams who don't ever use CW is a reasonable guesstimate.

Not a netserver account, Dick, a news-server account. I subscribe to
spamkiller.newsfeeds.com separately and in addition to the news server
provided by my ISP. Val subscribes to Supernews.com in the same way
that I subscribe to Newsfeeds.com. So I thought you had subscribed
to Supernews. There's nothing untoward about subscribing to a news-
server different from one's ISP. Get with the program, will you?

Nobody knew who was involved in Sept 11 until after it happened so
your statement doesn't make any sense. There is no effective way to
monitor telephones if you don't know whose phone to tap. There is
no effective way to tail people if you don't know who to tail. There
is no effective way to catch people who cheat on their income tax
if you don't know who to audit. Internet is no different.

>change
>modes.

I think you mean "change bands". In most cases the propagation does not significantly vary across an amateur band.

> Perhaps that is what we should be teaching new hams.

Sure. And having more bands available is definitely part of being prepared.

But for the change bands idea to work, all stations involved must have the bands
available, there must be agreement on alternate frequencies and a way to coordinate the shift.

Example: A 75 meter net starts to lose copy of a station in the emergency area that has important traffic to send. What alternate frequency should be used? Does the whole net go there or just one or two well-equipped stations? What if the alternate frequency is already in use, or the copy there is even worse?

Seems to me a quick shift of modes could be more effective. If the stations all have, say, lappers and PSK31, they could shift to that mode to pass the traffic - probably in less time than it would take to retune makeshift antennas and find
each other on a different band. If they're prepared, that is.

Steve,

With all due respect, your personal vendetta against
Len has taken a life of its own and it's getting really
tiresome to see you respond to every single post
Len makes with tirades of "putz", etc.
(and no redeeming content from you).

I'd personally just as soon not "killfile" you because
you are, IMHO, an (otherwise) rational and intelligent
person who might, just might, if you get off of this
vendetta, say something worth listening to ...

How about you give us all a break, give it a rest,
and see if you can come up with some more valuable
commentary here instead of offering nothing more than
a constant stream of gratuitous insults directed at Len?

(Yes, I admit that occasionally I get frustrated or PO'd
to the point that I insult someone ... but your thing with
Len is different ... it's not an occasional slip ... it's a
constant flood.)

Please consider this in the spirit in which it's intended.

73,
Carl - wa6vse

> The word is "pompous".

Well, EXCUSE me for the typo ... I don't type nearly as well as
I used to years ago because I have some lack of coordination
in my hands and fingers due to a spinal chord injury.

I use your nit-picky correction of such a simple, inconseqential
error as further evidence that you are, in fact, a pompous jerk :-P

> I don't think you're a jerk, Carl. I think you
> are clumsy and arrogant in dealing with human beings. Can you say
> "archaic legacy modes" three times, very rapidly? Okay, now try
> "beeping real fast".

Did them both "real fast" ... no problem ... that proves every bit
as much relative to my worth as a ham as a Morse test would.
(in other words, zip, nada, zilch, zero ...)

> > I agree completely "Why the ARRL BoD 'refarming' initiative?"
> > I think it's a stupid, ill-advised idea aimed at pandering to the
> > SSB-only crowd.
> >
> There's an example of Carl being brutally honest...

Yup ... totally honest, no punches pulled. I honestly can't think
of a truly sugar-coated "politically correct" way to describe
how stupid and ill-advised the "refarming intiative' really is ...

> What you call "brutally honest", others may describe
> of interpersonal skills.

Many people have told me that they appreciate my
candor and the fact that they know where I stand
by what I tell them, rather than having to try to play
mind games "reading between the lines" on a bunch
of mealy-mouthed, "politically correct" crap.

BTW, Dave, your "intrapersonal skills," as evidenced
here, are not the best I've ever seen ... that's why I
think you're a pompous jerk.

> They're HF bands, Carl. Why wouldn't you count them? You could've even
> dazzled 'em with digital modes or CW on 30m.

Would they have made the situation look more "crowded"?
I don't think so ...

> Speed of throughput is not an indicator of the value of a mode.

No, Dave ... I didn't say that "pure speed of throughput" was
a metric of "goodness" ... read what I said again ... I said that
the two metrics that I believe in most are "bits/sec/Hz" ... that
is essentially a time/throughput/bandwidth factor ... and "Eb/No"
which is the ratio of the (required) energy per bit to the noise
power density.

BTW .. those are not simply "Carl's prefered metrics" ...
they are metrics that are virtually universally accepted in
the engineering community (of course, that will probably
result in an immediate reply "So what, we're hams, not
engineers?" ... if not from you, almost certainly from
Dick ... but the point is that they ARE two of the best,
most valid metrics against which to evaluate any modulation
or modulation/coding scheme.)

Check out www.onmag.com - The Online Creativity Magazine, encouraging creative writing, photography, music, computer related art, filming & more...

With the millions of websites on the World Wide Web today, and with the list of websites growing ever so fast, what is it that endears us to only a selected few sites? What makes us want to visit and re-visit only a chosen few from that abysmal ocean of websites? Besides other things, it’s primarily the content, the use, the entertainment value, the attractiveness, the quality of information and the opportunities offered by the particular website. But unfortunately there are very few sites that have all these characteristics. Today, the world is fast shrinking into a global village. It is the age of Internet journalism, where there’s an urgent need for a website where we can openly express ourselves. We need a site where there’s no hassles of having to deal with editors, no cut-throat competition, no restrictions – Just Pure Creativity.

Onmag.com has recieved overwhelming response for its previous & current issues. The current issue has new selection of poems, articles, stories & photography stored in it from national & international contributors. From this issue there will be prizes for Best Article & Best Poem and there will even be prizes for registering to the online magazine for free. Very soon there will be i-movies section on the magazine, for those who are interested in making movies. The first Onmag.com presentation 'Kilbisa - the guilt' will be premiered soon on the magazine. We are looking forward for your further support for encouraging new writers & photographers and remember at Onmag.com YOU come FIRST .

So, what are you waiting for just go ahead and log on to www.onmag.com & read on...

Submit your work to Deep Malhotra at webmaster@onmag.com

Anonymous coward and all-around fuckwit
"Stagger Lee" <SLee@houston-hunks.com>
revealed what a hypocrite he is and ironically admits he has no credibility
in message
<3C36FDCC.76EC185D@houston-hunks.com> :

"Therefore, I find your story difficult to believe. Your own anonymous
status makes the story even less credible."

Faggot Lee pretends he has a ham call, he's really too chickenshit to give
one, even if somehow he could cheat the exam and actually get a license.

Faggot Lee pretends to actually "know" things, (despite evidence to the
contrary) just like when he "claimed" that Kevin Mitnick "posted" to
alt.2600 newsgroup, the regulars responded with in
3b21a9f5.1576859@news.irvn1.occa.home.com:

"First off, you don't know what a real hacker is which is pretty much
evident from you mentioning Kevin Mitnick, he got caught being a
criminal, not a hacker. Kevin Mitnick was in prison for several years,
and until recently, as a condition of his parole, he was prohibited
from using a computer, or even talking about them, so it's pretty much
a given that he is not posting here. If he was, he sure as hell
wouldn't be calling himself Kevin Mitnick. Emmanuel Goldstein has
enough troubles, and has an all consuming lawsuit to deal with, I
doubt he has the time or energy to post here, or anywhere for that
matter. I don't know who the hell Susan Thunder is, but it doesn't
really matter, because there are enough knowledgeable people that post
here to more than make up for some mythical "superhacker". If you
don't like the FAQ, write a new one, I'll be waiting to see if you can
do better.
The porn postings are beyond the control of this group, and are being
dealt with at the ISP level. You should know as well as I that you can

not control what is posted to a newgroup, although I know you would
like to control it. This in it's self makes you an idiot.
What further makes you an idiot, is that you have now insulted just about
everybody in this group (alt.2600) with your statements. I hope you have a
good firewall."

Stagger Lee, Idiot-at-large and the Gomer Pyle of Shit of Usenet.

--
Fuckwit Lee finally admits his SPANK at AB8MQ's hands yet another time in

You must have read a different plan than the one I read. I saw it as a
consensus view from the board. It appears to me that much work went
into it. What would you have come up with? What alternative do you
offer?

> > What you call "brutally honest", others may describe

I'll bet you've been told that you're a good dancer and that your
cologne smells nice. You've railed here against the ARRL plan for
refarming the bands. In all of your brutally honest candor, you've
neglected to tell us anything much except that you consider it, "stupid
and ill-advised" and "mealy-mouthed, 'politically correct' crap".
Those folks who told you that they appreciated your candor and the fact
that they know where you stand when you tell them something were being
politically correct.

> BTW, Dave, your "intrapersonal skills," as evidenced
> here, are not the best I've ever seen ... that's why I

Why would you object to my being brutally honest, Carl? After all,
loads of people love and respect you for that very trait.

Whatever first, second, and third alternate frequencies have been previously
selected. I assume you do plan ahead?

> Does the whole net go there or just one or two well-equipped stations? What if
> the alternate frequency is already in use, or the copy there is even worse?

Emergency traffic gets the frequency. A new frequency can be negotiated
if another frequency is needed. If the copy is worse try second and third
alternates. This ain't rocket science.

BUNK... No one is cheating because of public
availability of the question pools. The FCC tests have a similar
set of publicly published Q&As.

Cheating implies an "illegal" or unethical means by
which the person obtained the questions. Since the Q&As are
made available with full approval, consent and,
indeed, by regulation, no one can be said to be cheating
on a ham test simply because the person has had access
to the questions and answers beforehand.

> And, at least for me, it is plain fact that should such
> material become available then students WILL use
> it -- in whatever way they can!

The ham Q&As are made available for that specific purpose.
Are you confused as to the FCC intent?

> Some people, perhaps "many" people, will do almost
> ANYTHING rather than truly learn the material.

Memorizing hundreds of questions and answers seems
to be a consider aommitment in time and effort. Additionally,
a great deal of ham knowledge that is on the tests can
ONLY be "learned" by pure rote memorization. For
example...there is nothing conceptual that can be learned
that will impart the ability to anyone to be able to know
the band limits for operation other than straight memorization.

Cheers,
Bill K2UNK

You reminded me that we are discussing ham licenses, not
pilots' licenses. I'll just remind you that we are discussing
ham licenses, not college degrees.

You may share Dick's view that a ham license is equivalent
to a college degree but it is just not true. Ham radio
is a hobby where examinees are expected to meet *minimum*
requirements. Q&A for many government issued privileges
are published.

I say anyone who can rote-memorize 1000 questions and
answers should be given a medal and welcomed into ham radio
because such a person is a genius. If you don't believe it,
please respond by memorizing the definitions of 1000 Russian
words. Dick has declined to do so.

I've been in ham radio for over 50 years and as far back as
I can remember, the Q&A were published in one form or another.
If ham radio testing is broken today, it has been broken for
the past 50 years. I rote-memorized my way to an all-frequency
privileges amateur radio license in 1952 when you were still
messing your diapers.

Indeed, it should be quite obvious, Val. But it clearly is
not, to the code-hating "geniuses"
here on rrap. That would be MORSE code-hating. Too much
computer code has fogged their thinking.

Thanks, Val. I'm glad you showed up here on rrap. Best wishes
on your new hobby, and I'm
sure you will find the tests to be a breeze. See you on the
air.

Duuuuuuuuh, Cecil, that means that 2/3 of ham radio have passed a CW test, and that
indicates
they had working skills in the mode. Never since the days of CW only has everyone who held
a
license also been a CW operator. If a full 1/3 of hams are fluent in the use of CW
the chances are excellent there will always be a CW operator on hand. Got a problem with
that?

Is that some more of your "advanced logic"?? The statement is as wrong as it can
be, and]
if you don't know it you're beyond dumb. The fact is that the same license issues
whether or
not the individual ham has any knowledge on the testing subject material.

I read the story when it was fresh. So you really believe, then, that the government will just
hand out carte blanche to you to design and use whatever digital coding you wish.
Dream on, for that's as far as it's going.

What is too obvious to require further elucidation apparently
has escaped you. Amateur radio privileges are open to *all*
citizens who meet a minimum level of qualifications, not just
to those who can pass a college exam. Amateur radio exams
are not supposed to be "so vastly more difficult" such
that the average citizen cannot meet the requirements. You
are comparing apples and oranges. You are also beating a
dead horse. The FCC seems to think the present ham population
is just about right.

The important word in your sentence is "had", Dick. I know many hams who passed their original code exam and promptly forgot everything they knew about Morse code. Those are the people I am grouping in the 1/3 who are non fluent in CW. They couldn't carry on a decent CW QSO if their lives depended on it.

Your error is in thinking that CW is like the Southern Baptist Religion. "Once saved, always saved", does not spill over to, "Once Morsed, always Morsed". I know a lot of older General hams who are no better at CW than my dog. Old Rascal learned to recognize --... ...-- as a sign to head for the bedroom. CW has not had a majority following in many decades. I believe that fully 1/2 of coded hams (or more) would have trouble handling a decent CW QSO nowadays. I'm the only CW operator in the Madison County Amateur Radio Club and my CW leaves a lot to be desired.

You have completely lost the point of the exchange, Dick. The point is that the internet is no more difficult to monitor than any other medium. In fact, with the latest equipment, it becomes easier to monitor than many other mediums since it can be automated. My ISP has notified me that anything I send over the internet may be monitored by a government agency.

I know you have an immense problem with logic, Dick, but something either exists or it doesn't. Dumbing down either exists or it doesn't. Please explain how I, as you say, am dumber after upgrading from Advanced to Extra? I purchased a license manual, looked over the material, and refreshed my memory on a few points. Exactly how did that act of learning dumb me down?

Dick, I can't get over the erie feeling that you are talking to yourself.
And I cannot take credit for the above concept. I do believe it was
Ed who first comprehended exactly what you are saying when you tell
newcomers that the easiest way to pass a ham exam is to rote-memorize
the Q&A while avoiding learning anything in the process.

Note the near-identical styles of writing.

"authoritative" - "geniuses"
"HARDLY EQUAL" - "MORSE"
"Extra-class" - "code-hating"

I still suspect that Dick is so desperate for support that
he is having Pal Val post his words.

I cannot wait for non-voice digital or even voice digital operation to be permitted in the phone bands. That will be so cool! I notice even Mr. Bodson and Mr. Milnes support adding digital to the phone segments in a motion to petition change of Part 97 by adding "data" to each line in 97.305 and deletion of "image and phone" in 97.307(f)(2). Looks like this idea is gaining support in the ARRL BoD. I assume the Newington crowd is 100% behind this also.

If you look at the cronology of the rise of popularity of
PSK31, it appears that the QST article was a "...me too.."
catch up story for the ARRL, AFTER PSK31 had secured very
popular acceptance in the worldwide amateure community.

PSK31 from the beginning had all of the necessary attributes
to be promoted and accepted in the HF ARS bands as a new,
conversational, digital mode, eg. extremely narrow band,
good noise immunity, easy to implement, open architecture by
its inventor(s), etc. I would have to agree with Cecil,
that one of its attributes that made it accepted and
promoted even by some of the most die-hard conservatives was
that the computer/sound card implementation was free.

>With all due respect, your personal vendetta against
>Len has taken a life of its own and it's getting really
>tiresome to see you respond to every single post
>Len makes with tirades of "putz", etc.
>(and no redeeming content from you).

First of all, Carl, it's not a vendetta. I simply refuse to allow this creep to villify Amateur Radio the way he does without repsonse.

And I do NOT repsond to "every single post" the creep makes. He does, on occassion, manage to say something without being insulting or accusing. Witness Hans' occassional posting of who the most significant users of RRAP are. The numbers aren't there to support your contention.

And he IS a Putz.

>I'd personally just as soon not "killfile" you because
>you are, IMHO, an (otherwise) rational and intelligent
>person who might, just might, if you get off of this
>vendetta, say something worth listening to ...

Carl, if there was a whole lot of content in this NG that warranted any significant interaction, I would gladly participate in it.

Although certainly more civil, with the recent exception of Jim, N2EY's historical perspectives, there is nothing being said here by ANYONE that hasn't been said over and over and over and...Well, you get the picture...

"Code get's through when nothing else will"

"Digital Modes are the salvation of Amateur Radio"

"Beepers are the damnation of Amateur Radio"

"I know more than you know and knew it before you did"

Take a stroll through any given nights' offerings and keep those four lines in mind. You will see what I mean.

A couple years ago I suggested a mutual effort by all those assembled here to get the Spectrum Protection Act through Congress. A couple folks said "...Well, everyone AGREES on that idea, so it's not worthy of debate or discussion" and it died a quiet death.

Well, so has the last couple of attempts to get it through The Hill.
Guess it wasn't as popular as some thought, eh?

This NG is nothing about "policy", the name notwithstanding. It's about exerting frustrations that most wouldn't dare vent on the air. And with good cause.

>(Yes, I admit that occasionally I get frustrated or PO'd
>to the point that I insult someone ... but your thing with
>Len is different ... it's not an occasional slip ... it's a
>constant flood.)

Recent history is ripe with examples of people allowing the likes of Leonard H. Anderson to walk all over them. I am not one of them.

Lennie opened those gates, and he has it at his discretion to close them. He won't. He can't. To do so would invalidate his years of calculated hatred and personal vendetta against US. He's not that much of a man, Carl.

Since we are discussing it, Carl, may I ask WHY, when things were so much more civil and balanced, were YOU not at Lennie for his profanities, name calling and like behaviour?

>Please consider this in the spirit in which it's intended

I do, Carl. You know I won't lay into you like Lennie would lay into you if you suggested to him that changing his abusive and callous bile towards Amateurs might earn him a bit of respect and tolerance and simultaneously cool the flames.

I am sorry you disapprove, Carl. Your objections are duly noted. Thanks for taking the time.....

I respectfully disagree, Valentine. The pools do not show up in the exact form. I took the extra test a few weeks ago, and the answers were all switched around. If I had been stupid enough to try to memorize the tests instead of learning what was on the tests, I would not have passed.

In general, the answers are in a textbook also. You just have to read it.

I didn't buy a study guide because I am cheap. I downloaded the question pool, sat down with the pool and reference material I already had. Anything I couldn't find, I looked up on the web. I learned the needed material.

The effort took me around five days of studying between 2-3 hours a day. It takes quite a while to work through around a thousand questions. Memorizing the questions would have taken a whole lot longer. And wouldn't have worked anyhow.

That's the error in YOUR thinking, for levels of 13wpm at least. It's not something one completely forgets, sort of like how to ride a bicycle. That assumes the individual actually
did learn it, and didn't scam the system.

> I know a lot

Well, how 'bout that! And so your ISP will monitor you, mine might monitor me, but who
is
gonna monitor BinLaden?

The point of all this was not the internet anyway, that was just used as a point of
reference. The point was that FCC nor the government in general will be in any way
inclined to turn
ham radio loose to do anything anyone might way to do with ham radio re Carl's bright
ideas for an idealistic digital nirvana in ham radio. It would set us up to become an
underground illicit means of international communication that could easily harbor
hidden
terrorist communications which might escape detection, at least until too late to be
effective
Carl thinks he has all this figured out. He needs a new abacus.

I know you have an immense problem with the real world, Cecil. Sometimes a thing
exists in some areas but not in others. Got it? If an engineer passes the ham radio
tests
on the basis that he already knows electronics, and a near-illiterateCBer passes the
same
test on the basis that he wasn't required to learn anything, both get the same license.
Now tell me nothing is dumbed down.

> Please explain how I, as

We are talking about hams functioning well under emergency conditions, not merely
bailing themselves out. I'm talking about CW emergency nets.

You really think someone can effectively use CW after not using it for half a
century? It is my belief that he would simply be in the way in a CW emergency
net.

OK Dick, I give up. Which one of those new hams was dumbed down by the exams?
Was the engineer dumber after he took the test or was the CBer dumber after
he took the tests? Were you dumber after you took your tests?

Consistently? Or once in a while?

>(I planned ahead for ham radio when I bought this place ...)

That's good. Most hams have to compromise on the choice of a home.

And all that stuff is at your home.

It needs a separate pass-fail test for reasons that have been rehashed
time and again here. If you've read my posts, you'll see that I don't give
emergency use of Morse as one of the reasons.

>> > you can't just say "I know Morse." and think

>
You have not produced the post, however. Curious (not really)

It suddenly occurs to me that you might think I was arguing for code testing
based on emergency use. That's not my point at all. I'm simply
pointing out that Morse/CW is useful in emergencies, and is in fact used
by hams in emergencies. And not just because of operator preference.

The test is a whole other issue. It's a dead issue for over 2 years now. FCC
gutted what was left of code testing so that all we have is a bare minimum 5wpm
test, propped up by S25.5. It's clear from the R&O to 98-143 that FCC will drop
all code testing as soon as the treaty allows.

And if porcine aviation intervenes, and S25.5 somehow survives WRC 2003
(bear with me, Carl, miracles do happen), all the FCC will do is retain that
bare
minimum.

>> >as someone (was it Ed or

Which means what? No mode tests or no mode subbands?

>If you want to spend the time becoming really good at Morse, be my
>guest ... I'm not the least bit interested and would not, therefore, waste
>my time doing so ... does that mean I want to stop you? No! Does
>that mean that I want to "take something away from you"? No!

After years of reading your diatribes against the mode and its users,
Carl, I'm just a wee bit skeptical.

Y'know, you sure do preach to the choir about preparation. Seems to me
that part of preparation would be getting the license with the most privileges,
even if you didn't agree with all the requirements.

And you Dick, clearly still don't understand that a ham
license is NOT a degree in anything. The license is a
gateway to allow the license holder to be on the air.
What hams have done in the past and still do now is to
follow one or more paths after becoming a ham which
focuses their "advancement, knowledge, skills" into
specific areas.

I passed the Extra over two years ago...and have promptly
forgotten 2/3 of the stuff that was on the test. Why you may
ask? Simple...I have NO need or desire to retain the
amount of time I have to notify the FCC before I conduct
amateur space operations....or the details of VE rules
and regs (and yes, I am a VE...but I help when I can,
I don't run VE sessions myself).

> > > This is REGARDLESS of the fact that an Extra-class

> enough backup energy for a few hours and I'll be adequately prepared?

You prepare for whatever duration you want. There is NO hard and
fast rule. Emergency preparation decisions are driven by expectations
based on past experience, planning for that rare "worst case"
situation and, in the end, personal ability to support preparedness
in terms of equipment, power, storage capability, and finances.

I could easily have an emergency generator with 100 gallons of
gasolene available...BUT, who wants to have 100 gallons of
gasolene stored at their home. I can, however, have a full tank
of gas in my car, my car has a 12 volt alternator, I can (and do) have
several 12 volt sealed batteries to power my rig. IF the batteries
needed recharging, I could easily connect them to my car and float
them while still running my rig directly off the vehicles 12 volts
for an hour. Off hand, I'd probably be able to run for several
days without ever leaving my property to get gas.

Other possibilities include augmenting via solar panels. You
can certainly get sufficient power from a relatively small panel
to operate in recieve and still be slightly charging the battery.
If your primary purpose was to assist, rather than be the
emergency control operator/hub/node, that may be all you
need. Especially if communications can be maintained using
low power...which is far more the case than any need for
even 100w.

>
> You have standby duplexers, I presume.

I'll let Carl answer that. The other question to
you is just how much redundancy does YOUR
emergency set-up have? Redundant transciever? Power?
Microphones? Morse Key?

> >> >> > if it's not available, fine ... that's where operator

Is it then your opinion that a person with NO morse skills
can, in fact, be a good operator...or, as Carl is trying to
ferret out, must the person have morse skills
for you to consider the person an expert operator?

<snip>

> It suddenly occurs to me that you might think I was arguing for code
testing
> based on emergency use. That's not my point at all. I'm simply
> pointing out that Morse/CW is useful in emergencies, and is in fact used

I have NO problem with that mindset/approach. You then make morse
skill no different than many other optional skills (additional language
capability,
first aid knowledge, etc.) Each of those are not skills or abilities that
a ham must have, but can be useful and/or simply avialable as one of
the tools in that ham's bag of tricks.

> Which means what? No mode tests or no mode subbands?

We have, except for morse, "no mode tests" now. And, in actuality,
MOST emergency coms are on VHF/UHF which can and does
involve hams that don't require any morse mode test (i.e. Techs).

As to mode subbands, I don't see how that is evident
in what Carl has said above.

> >If you want to spend the time becoming really good at Morse, be my

Why, you won't find anything from Carl that supports any notion that
Carl, myself or NCI wants to eliminate morse USE.

> Y'know, you sure do preach to the choir about preparation. Seems to me
> that part of preparation would be getting the license with the most
privileges,
> even if you didn't agree with all the requirements.

Why?
In a real emergency, even a nocode Tech can operate HF
(i.e. the license privileges don't prohibit operating on
ham band segments that the license itself wouldn't otherwise
permit.)

Cheers,
Bill K2UNK

>problem with that?

I do not believe that 1/3 of hams are proficient enough in CW to be able to accurately handle traffic under failing band conditions. I don't belive that in 1963, 1/3 of all hams were proficient enough to accurately handle traffic in failing band conditions.

I don't believe that 1/3 of all hams could accurately handle formal traffic under ideal band conditions.

>PSK31, it appears that the QST article was a "...me too.."
>catch up story for the ARRL, AFTER PSK31 had secured very
>popular acceptance in the worldwide amateure community.

To some extent you are correct, Clay, but from what I saw, the popularity increased rapidly after the appearance of articles on the subject. QST's article was not the first, I believe.

>I would have to agree with Cecil,
>that one of its attributes that made it accepted and
>promoted even by some of the most die-hard conservatives was
>that the computer/sound card implementation was free.

As would I; I believe the sound-card aspect of PSK-31 and other digital modes was the dominant factor in its success.

Not if they are published by the instructor.

In grade school, I was always provided with
the list of 20 spelling words I'd be tested on each week.
Was I cheating because I had them?

Yup, I can hear them black helicopters comin'
in for Dick now.... whup, whup, whup :-)

Funny thing is that you don't even need radio
to pass encrypted messages anymore. POTS (plain
old telephone service) gives you all anyone needs.
POTS plus a modem, a PC and an encryption program
will do it all...text or voice.

Cheers and ROTFLMAO.

Nothing strange, but your comment implies that's wrong....so
what's so wrong with that? If they become good
operators and act as a positive force, what more do you
want?

> That is, I see
> generations "X", "Y" and "Z" in action all the time, and this is
> the way it IS.

Yadda, yadda, yadda...the same old crap about the
shortcomings of current/recent generations.
Strange that in the midst of these new generations
we have the most technological innovation at the
most rapid pace in all of recorded history.

> Classwork, study and "achievement" are just
> part of a "game" for far too many, and there is no intrinsic
> value seen in hard work or getting something because of it.

Generational stereotyping... there have always been those
that could be so described. Likewise, there are millions that
do it all, often with little or no expectation of reward.

> No, the work needed to gain true farmiliarity with a subjectl is
> seen as an "unfair burden" that should be lifted as soon as
> possible, by cheating if necessary, sometimes.

PLEASE...tell us who (how) in amateur licensing is cheating.

> The "deal" today for many, many young people is: "Get it any

More generation bashing.

> For whatever reason, the idea of the INTRINSIC value of
> hard work to get something is simply in the dumper. It's the
> LEARNING how to WORK that is simply not valued.

I don't give a damn about how much anyone works...it is
the results that count. Some people can bust their humps
working and accomplish nothing. Others expend 1/2 the
effort and produce major contributions.

> Most
> students today can't even understand the concept. I have
> students who pay hundreds of dollars for my class and then
> cheat because they have a visceral revulsion to actual hard
> intellectual work.

IF you are so certain they are cheating, why do you
accept that.....or is the "cheating" only
speculation on your part?

> That is, the degree today is a hoop, part
> of a game, and not anything valuable in and of itself.

The degree has always been nothing but a gateopener.
What cracks me up...and I've seen this many times...
is the people that expect a lifetime of adulation because
they hold a degree...especially the PHD...yet many
of them rest only on their laurels of academic
stardom and contribute little or nothing.

> What
> counts is GETTING it, by whatever means possible. When
> you have your ticket punched, you done.

Pretty much thecase as one intially enters the career
marketplace. Within a short time, however, the degree
means less in regards to career accomplishments.

> Get with the modern world, guy. Today, unfortunately, MOST
> students only want to know ONE THING -- WHAT'S going to
> BE on the TEST! And many times they just flast ASK THAT,

Never hurts to ask. You are free to answer or not.

> In an academic setting that is RIDICULOUS, that request,
> but today Ham Radio simply GIVES that material away!

The knowledge to pass the test, be it via question pools or
a short 16 pages of a licnese manual has been the norm for
over 50 years.

> It may be LEGAL, but it ain't, er, a TEST, in my view anyway.

Your opinion, your problem, deal with it.

W1RFI wrote:

>So you believe "many" people want to become amateur
>operators so they won't learn anything?

In a word: YES! All they want to do is "learn" how to get a hand-held radio and get on the repeater, with as little trouble as possible. What 's so strange about this? That is, I see generations "X", "Y" and "Z" in action all the time, and this is the way it IS. Classwork, study and "achievement" are just part of a "game" for far too many, and there is no intrinsic value seen in hard work or getting something because of it. No, the work needed to gain true farmiliarity with a subjectl is seen as an "unfair burden" that should be lifted as soon as possible, by cheating if necessary, sometimes.

The "deal" today for many, many young people is: "Get it any way you can, and DON'T feel bad about it." It's this last that has changed over the last ten years or so especially. That is, students at least used to feel bad when they took the low road. Now they mostly don't. It's quite a disturbing trend, I think.

For whatever reason, the idea of the INTRINSIC value of hard work to get something is simply in the dumper. It's the LEARNING how to WORK that is simply not valued. Most students today can't even understand the concept. I have students who pay hundreds of dollars for my class and then cheat because they have a visceral revulsion to actual hard intellectual work. That is, the degree today is a hoop, part of a game, and not anything valuable in and of itself. What counts is GETTING it, by whatever means possible. When you have your ticket punched, you done.

Get with the modern world, guy. Today, unfortunately, MOST students only want to know ONE THING -- WHAT'S going to BE on the TEST! And many times they just flast ASK THAT, and expect to get it, down to every jot and tittle.

In an academic setting that is RIDICULOUS, that request, but today Ham Radio simply GIVES that material away!

It may be LEGAL, but it ain't, er, a TEST, in my view anyway.

You conveniently left out the specific subject areas I delineated
as being of worthless value to me. Are you saying it is of
any importance that I or any other Extra retain the following
rules and regs minutia:

How long before/after I must notify FCC of satrting/concluding
amateur space operation.
What all the details are about running a VE session.
Etc.

Hi Alan.

Beats me why they still have customers. Out of all the ISPs I have tried in the last year, they rate as the worst of the lot.
Lineone was running fine, until they got their hands on it. My password started being rejected, newsgroup messages dropped to zero at one point. Outgoing messages took days to appear on the groups... and if they contained my thoughts of WOL, they never got there.
My Lineone addy just fills with Spam, some of the headers give Tiscali servers as the source of the messages.

Still, it has to be worth signing up, just for the free gifts. I got a free CD upon sign-up and I receive "Tiscali" install disks with the latest IE version... the last one had Bodyworks on it!
Whenever I get a free ISP disk, I always explore it for free software. "Supanet" include "World Book" on their free install disk available from a certain chain of computer stores. They say you must sign up to load the software, but that depends on how good you are with your computer.
Supanet lost this group totally for a while last year.

Just take the gifts they offer and run like hell.

I know... Typical CBer, wanting something for nothing. But if the companies are offering, then I am accepting.

Peter.

Ah, one of those "kids today" sort of things. If someone wants to do nothing, there are better ways than Amateur Radio to do it.

The idea that someone wants to rote memorize 1000 questions without understanding so they can do nothing is ridiculous on its face.

And if they do want to take the easy way out, it is easier to learn the underlying material than to do all that memorizing.

The Novice/Tech+ segments are virtually unused. The ARRL proposal pretty much divvies them up 50-50 vs phone/image and CW/digital.

Why is not it a stupid, ill-advised idea aimed at pandering to the CW-only crowd? Or the image-only crowd? Or the digital-only crowd?

I am all for it. IMHPO, if there needs to be any limitation on emissions vs frequency, it should be a bandwidth limit. I cannot see why a 5 kHz wide digital voice signal is okay on 14.250 MHz but not a 5-kHz wide digital data signal.

>I assume the Newington crowd is 100% behind this also.

I don't think that 90% of the ARRL HQ staff in Newington cares one way or the other about this issue, Clay. Until there is a Board motion, none of will have any professional responsibility toward this. If the day comes, I might be asked to do some sort of engineering in support of ARRL's position, but in the meantime, my interest is personal.

I don't think I have seen 100% of the Newington staff agree on nearly anything, Clay.

Clearly, you haven't been reading r.r.a.m. or the other news groups to
which the thread was cross posted.

The thread is about a low life ham who has been posting crap for years
in several news groups. Since the thread is about a ham and his Usenet
harassment and filth, plus his on the air jamming, it is unfortunately
about ham radio.

You don't like it? I suggest that you use your OE news filters, or
simply skip the thread. No one is forcing you to read it, and you sure
as hell aren't going to get any of the participants to stop.

P.S. Don't be a smacked ass all your life.

>Ed ... 1st, please do see if you can get those articles on the website
>(at least in the members section).

Already sent to the Webmaster. Probably Monday or Tuesday. And they will be in the public part of the website. Paul Rinaldo, W4RI, ARRL's DC Technical Relations Manager, likes to brag about amateur ALE, so I want to give him a brag URL. :-)

Of course, most hams do MLE, or rely on their own good judgement of of what band will be open when.

>2nd, I didn't mean in any way to allude that ARRL had voiced
>any opposition to ALE techniques ...

Didn't take it that way, Carl. I posted the articles just to give those who were interested some pointers.

>REAL ham radio" (because a machine is assisting.
>

Fewer than you would think, and few enough not to matter. :-)

Hey, my QRP buddies thought that the 2XQRP EME work using long-term integration of a Morse-encoded CW signal was way cool! As soon as the DSP-10 is built, I want to try the technique on HF.

What we REALLY need is a good software-defined/DSP HF radio with open source code. So far, I haven't talked any of my low friends in high places at various manufacturers into doing it.

For that matter, we could use open source on the programmability of the IEEE 802 devices! :-)

>representative is implicitly ONLY to the ARRL.
>
>Your denial of the obvious and attempts at misdirection do not apply.

What misdirection? We are still talking about the same subject.

And I think that we can let everyone decide for themselves whether it is obvious that ARRL wants people to be loyal only to the League because of the words it chose in its code of conduct.

>No, but I'm glad you feel better in thinking the matter is "settled.".

>I'm sure your employer is happy as well.

Len, my employer could give a rat's butt about rec.radio.amateur.policy. You sure do have an active imagination.

>The ARRL MENTIONS other organizations. Since when did it "promote" them?

Just as one example, I specifically added information about TAPR to the ARRL Tech info pages on anything related to digital. It was done to promote TAPR.

>Are you going to continue this word-game charade to please your
>employer?

Is that a serious question? Do you really expect anyone to believe that I am engaging in conversation on rec.radio.amateur.policy to please my boss? If so, you have a very distorted view of reality.

>>>Since very recently. The ARRL has been in existance since 1914.

>>Okay, but if you have to go back to 1914. . . :-)

>Follow the context of a reply. ALL THE WORDS.

>Selective quoting is a very poor technique in debate although it is
>extensively used in Internet squabling. You are engaging in mere
>squabling.

It was a joke, Len. That is why I added the smiley. I then did indeed go on
to quote the rest of.

Relax; you will live longer.

>Your own one-sentence "questions" as replies may be "worked over"
>with the same technique to show you the foolishness. You will not
>like the result. Neither will your employer.

Mark won't care one way or the other, Len. He cares about how well I run the
Lab, how well the Lab handles RFI, Product testing and the various FCC
engineering studies we are asked to do.

His interest in rec.radio.amateur.policy is zero.

Your attempt at misdirection is a feeble one.

>>No, I think we kept right on subject.

>Then we can all take it that you are spinning as an ARRL-apologist.

You are free to take it any way you want, Len. Think everyone is buying it?

>>You are correct, but how do those statements explain your belief that ARRL
>>is trying to control you?

>Incorrect. I stated that the ARRL is exercising CONTROL through labeling
>itself as THE representative of US amateur radio to the FCC and from an
>88-year tenure under such a claim. That is CONTROL over ALL amateurs.

And for 95% of the FCC regulatory matters that affect Amateur Radio, ARRL is
the only amateur organization that files. Of course, you will conveniently
ignore the fact that ARRL encourages amateurs and organizations to file on all
matters that affect ham radio. So much for "control," eh?

>>>Why do you deny that the ARRL has had a strong influence
>>>on the government regarding amateur radio regulations?

>>I do not deny that Len. I would not put the amount of energy I put into the
>>FCC regulatory filings I particiate in if I felt that such work would not
>have
>>influence. Why would I *want* to say that?

>Who is Ed Hare's employer?

Exactly, so why would I deny that ARRL has a strong influence at the FCC. Now, the last time we went through this, you were arguing that ARRL had little influence over the FCC. I guess you change your argument to suit your agenda du jour.

>>>Are you saying that First Amendment rights "do not apply" when
>>>it comes to amateur radio regulations?

>>Yup, it is another one of those "what he said, what he heard" sort of
>things.

>You did not answer the question.

I agree with ARRL that amateurs and organizations should file their comments with the FCC on matters that affect Amateur Radio.

>You wish to use the single-sentence question as a "reply" on most
>of your postings. That is a perfect example of the "what he said, what
>he heard" sayings.

>Why is that method exclusive and unidirectional for yourself, yet
>"not allowed" for others?

Are you trying to control what I post now? :-)

>>I don't believe that misdirection is needed here, Len, and we are still on
>>topic. If you feel ridiculed, it was not due to misdirection.

>Please do not engage in any more mind-fornication techniques. Those
>are tiresome and transparent.

Yup, you are trying to control what I post. Misdirecting this by calling my tough question "mind fornication" does not help you make your point.

>Your employer may not be pleased. The ARRL still hasn't membership
>of even a quarter of licensed US radio amateurs. You are not making
>things better.

If I admit you are right, will you become an ARRL member?

Bill, you have to realize the common Urban Myths are still
in force in popular ham mythology.

"When real emergencies happen the cell phones 'always' go
down" and "amateurs will immediately jump in and save the
community with their skills and equipment." This is part of
amateur "history" from you-know-who's publishing. :-)

"CW gets through when nothing else will," presumably even if
all primary electrical power fails.

>> >With my location on the exact top of the highest hill in the area,
>> >I can BE the repeater
>>
>> You have standby duplexers, I presume.

>for you to consider the person an expert operator?

It's fairly clear to anyone who has read the outpourings in
this chat room that N2EY is constantly pushing for the
supremacy of the morsemen in amateur radio under any
and all conditions.

>> And if porcine aviation intervenes,
>
>Did I miss something? I have no clue what "porcine aviation" is
>in reference to?

:-) "If pigs could fly..." :-)

...just more of necro-equine flaggelation by a renowned morseman.

>> After years of reading your diatribes against the mode and its users,
>> Carl, I'm just a wee bit skeptical.
>
>Why, you won't find anything from Carl that supports any notion that
>Carl, myself or NCI wants to eliminate morse USE.

Bill, you have to understand that morsemen are morsemen to the
very bitter end. Anything, however trivial, not positive towards
morsemethods shall always be construed as outrageous insutling
personal comments and dealt with harshly.

A non-positive attitude against retention of morse testing is ALWAYS
taken as evil, vile very-personal insults against the superior radio
skill in morsemanship proven by actual federal, merit-badged testing.

"The few, the proud, the US Morsemen."

>> Y'know, you sure do preach to the choir about preparation. Seems to me
>> that part of preparation would be getting the license with the most
>> privileges, even if you didn't agree with all the requirements.
>
>Why?
>In a real emergency, even a nocode Tech can operate HF
>(i.e. the license privileges don't prohibit operating on
>ham band segments that the license itself wouldn't otherwise
>permit.)

Never mind trying to state some silly little federal regulations, Bill,
those don't apply in the Virtual Morseradio World where the dreams
all revolve around a core of morsemanship once again saving the
Titanic survivors of 1912 or alien invasion, whichever comes first.
Intense dreaming seems to be all the preparation needed by the
morsemen. They are always ready to jump into action to save the
day and the nation through their federally certified morsemanship.
They have dreamed such and deserve all the respect and honors
and glory they feel is theirs. QED.

>possible, by cheating if necessary, sometimes.

Several fallacies in the above.

1. An amateur radio license test is NOT an academic
achievement test, never was.

2. There is misplaced "work ethic" applied to an AVOCATION.

3. Self-professed telepathy is not a guarantor of "knowing"
what "all" want to do.

4. According to some prevailing Urban Myths, one CANNOT
ever talk about amateur radio without first being a bona fide
federally-certified, merit-badged amateur radio licensee. :-)

>The "deal" today for many, many young people is: "Get it any
>way you can, and DON'T feel bad about it." It's this last that
>has changed over the last ten years or so especially. That is,
>students at least used to feel bad when they took the low road.
>Now they mostly don't. It's quite a disturbing trend, I think.

Heh heh heh...this mantra has been chanted in every single
generation since recorded history (including translations on
the walls of the preserved ruins of Pompeii). This seems to
arise as a side-effect of imbibing too many sour grapes when
there is a realization that few others follow self-professed
ethical standards and "excellence" in a hobby.

>For whatever reason, the idea of the INTRINSIC value of
>hard work to get something is simply in the dumper. It's the
>LEARNING how to WORK that is simply not valued.

Since amateur radio is defined as a radio activity "without
pecuniary interest" (the reason that the word "amateur" replaces
"commercial" or "professional"), it can be broadly categorized
as an avocation or HOBBY.

The "LEARNING how to WORK" only applies to trades, crafthalls,
guilds, and professionals.

>Most
>students today can't even understand the concept. I have

>you have your ticket punched, you done.

The alt.flame.teachers-against-students newsgroup is down
far in the next hallway next to alt.kill-those-that-do-not-follow-me
non-discussion group.

Amateur radio is defined as a HOBBY..

>Get with the modern world, guy. Today, unfortunately, MOST
>students only want to know ONE THING -- WHAT'S going to
>BE on the TEST! And many times they just flast ASK THAT,
>and expect to get it, down to every jot and tittle.

On academic policies you are free to discuss this matter with
school administrators. A reminder: Amateur radio is a HOBBY,
not a trade, crafthall, guild, union, or professional group.

>In an academic setting that is RIDICULOUS, that request,
>but today Ham Radio simply GIVES that material away!
>
>It may be LEGAL, but it ain't, er, a TEST, in my view anyway.

Feel free to write your elected federal officials from Missouri and
tell them about this odious condition in an uncaring world. They
will then consider the matter and inform the FCC if you are
reluctant to pursuie the matter directly with the FCC.

If neither group considers your views favorably, you are then free
to resume this diatribe of your generation so superior to the
obviously-inferior younger generation. After all, they must be
infected by the same lack of work ethic and ignorance you ascribe
to obviously-inferior others. :-)

Above all, remember that the First Amendment is not supposed
to apply to citizens unlicensed-in-the-amateur-radio-service!

I agree 100%, Bill.

My question stems from Carl's insistence that any problems which
arise in an emergency could have been prevented by "proper planning
and preparation".
>
>I could easily have an emergency generator with 100 gallons of
>gasolene available...BUT, who wants to have 100 gallons of
>gasolene stored at their home.

Exactly my point. There's the space problem, the transportation problem
and the fire hazard. Plus storage of such quantities of gasoline may be
a fire safety violation in many places.

> I can, however, have a full tank

Same here. But you have to be careful, because often sealed batteries cannot
be charged above a certain rate.

> Off hand, I'd probably be able to run for several
>days without ever leaving my property to get gas.
>
Hopefully. All depends on the vehicle.

>Other possibilities include augmenting via solar panels. You
>can certainly get sufficient power from a relatively small panel
>to operate in recieve and still be slightly charging the battery.

Yup - as long as the sun shines. In many parts of the US the average daily
winter sunshine equals about 1-2 hours of full power from a panel.

>If your primary purpose was to assist, rather than be the
>emergency control operator/hub/node, that may be all you

Sure! Did you see my list, posted in this thread a few days ago?
Did anyone notice that none of the listed skills are exclusively Morse
skills?

>or, as Carl is trying to
>ferret out, must the person have morse skills
>for you to consider the person an expert operator?
>
To consider someone an "expert" amateur radio operator, I would
have to include Morse skills, simply because the mode is so
popular with hams. Earning the title "expert amateur radio operator"
requires a LOT of skills. I do not consider someone with little or no
Morse skills to be an expert amateur radio operator. But I also do
not think that amateur radio or emergencies are the sole province of'
experts.

I don't presume to call myself an expert amateur radio operator, either.
Still way too much out there for me to learn and get good at.

><snip>

>MOST emergency coms are on VHF/UHF which can and does
>involve hams that don't require any morse mode test (i.e. Techs).

I'm just trying to clarify what the phrase means. "Free market of modes"
to some means no mode-specific subbands.

Note that even without the code test we do not have a free market of modes
in the written testing. Some modes are much more likely to be on the test than
others.
>
>As to mode subbands, I don't see how that is evident

>
>Why?

Preparation and planning!

>In a real emergency, even a nocode Tech can operate HF
>(i.e. the license privileges don't prohibit operating on
>ham band segments that the license itself wouldn't otherwise
>permit.)

If it's a genuine life-and-death emergency, yes - in fact, anyone can operate
any radio under those circumstances.

However, how many people will obtain and set up rigs they are not licensed to
use, just in case of life-and-death emergency? How many will know how to use
a rig/band/mode they've never used before because they lack the license?
Preparation includes stuff like having the license and the skills.

I can repost the list if you want...

The ARRL has been attempting to CONTROL the fun of a hobby activity for decades.

If some paid League staff employee gets his horn honked once in a while, he should keep the car doors shut rather than complain about the noise.

Hmmm...no remarks about the "impact" of the only ARRL staffer
who is a "regular" in this chat room?

Jim Haynie thought it reasonable that no ARRL Hq person should
give opinions in here. Of course, that was in private mail that
ensued after he popped in here shortly after his election.

>His interest in rec.radio.amateur.policy is zero.
>
>Your attempt at misdirection is a feeble one.

Not really. Many access this chat room to see what is
being shouted back and forth. That exact number is

unknown. Should there be an official ARRL poll on that
or are we to conclude that "his interest is zero" applies
to everything concerning the ARRL's appearance to the
outside world?

>>>No, I think we kept right on subject.
>
>>Then we can all take it that you are spinning as an ARRL-apologist.
>
>You are free to take it any way you want, Len. Think everyone is buying it?

Many have "already bought it" long before I came into this chat
room.

>>Incorrect. I stated that the ARRL is exercising CONTROL through labeling
>>itself as THE representative of US amateur radio to the FCC and from an
>>88-year tenure under such a claim. That is CONTROL over ALL amateurs.
>
>And for 95% of the FCC regulatory matters that affect Amateur Radio, ARRL is
>the only amateur organization that files. Of course, you will conveniently
>ignore the fact that ARRL encourages amateurs and organizations to file on
>all matters that affect ham radio. So much for "control," eh?

That CONTROL was virtually absolute prior to the FCC's accepting
citizen input through the Internet. Not just through a legal firm in
DC but through amateur news, opinions, and technology of radio
filtered through Newington.

How many individuals or local clubs could afford the legal fees to
contact the FCC in a formal way in the before-Internet days? How
many non-legal amateurs knew of the proper format of legal filing
in order to gain recognition and consideration before the
Commission? I'd say only a very, very small percentage of all
licensees.

>>Who is Ed Hare's employer?
>
>Exactly, so why would I deny that ARRL has a strong influence at the FCC.
>Now, the last time we went through this, you were arguing that ARRL had little
>influence over the FCC. I guess you change your argument to suit your agenda
>du jour.

The "last time we went through this" I said about the same as I had
on previous times...that the ARRL is now LOSING some of the
exclusivity in representation when the FCC has made it much
easier for everyone to comment to them directly.

Before Internet, the ARRL had almost a monopolistic influence power
over FCC amateur regulation decisions. It had a large demographic
base to "represent" (although still a decided minority through its
existance) and an established legal firm to do the communicating
with the government.

>>>Yup, it is another one of those "what he said, what he heard" sort of
>>things.
>
>>You did not answer the question.
>
>I agree with ARRL that amateurs and organizations should file their comments
>with the FCC on matters that affect Amateur Radio.

Yup, it is another one of those "spin" answers.

>Are you trying to control what I post now? :-)

I'm trying to get exact answers. I don't get those. What I get are
standard boilerplate "the ARRL can do no wrong" misdirections
into other areas.

>>>I don't believe that misdirection is needed here, Len, and we are still on
>>>topic. If you feel ridiculed, it was not due to misdirection.
>
>>Please do not engage in any more mind-fornication techniques. Those
>>are tiresome and transparent.
>
>Yup, you are trying to control what I post. Misdirecting this by calling my
>tough question "mind fornication" does not help you make your point.

Oh, my, SPIN is "not" mind fornication?

Spin is a constant ploy in the political arena. Influence by SIGs
(the ARRL is a SIG) on government regulations is a political thing.

Whether it is called "mind control" or "brainwashing" or
"psychological warfare," spin is still spin. It is common practice.

As you are trying to do here is to avoid a direct answer by bringing
up indirect references to some word useage as "not nice." That is
irrelevant. My original statement was that the ARRL has exerted an
unduly-strong influence over US amateur radio regulations for nearly
all of its history yet has always been "representing" a minority of
those licensees. What followed was a number of different examples
within the same subject area. "Answers" to all of those were met
with spin to avoid a (probable) uncomfortable direct statement on
the subject.

>If I admit you are right, will you become an ARRL member?

That is also irrelevant. Discussion on subjects in a newsgroup
does not require a direct participation activity.

ARRL bylaws specifically state that VOTING members MUST have
an accredited amateur radio license. While "others" (not-licensed-
in-the-amateur-radio-service) MAY be "members," such have NO
influence on any polls or other "voting" originated and controlled by
the ARRL.

Yet, the ARRL insists on controlling the amateur radio regulations of getting INTO amateur radio, based on "representation" of a minority who are ALREADY in amateur radio. To many, that is simply an elitist minority group trying to exercise control over a majority. That isn't working well. The membership of the ARRL is still less than a quarter of all licensed US amateurs.

> about ham radio.

But Faggot Lee forgets to talk about his on the air jamming and how he cheated other hams out of money, and by his own criteria, that is about ham radio also.

From: Rev Turd Fredericks <turdfred@catholic.org>
Message-ID: <PM000391D524FF3746@dhcppc1.home.com>

"Stagger Lee is anti-free speech because he originally came in here demanding that Steve Geilda, a regular in this group, cancel Roger Wiseman's account on his server because he didn't like what Roger was saying. That is anti-free speech."

"Since free speech is one of the foundations of the American constitution and America it's self, if you are ant-free speech, you are by defintion anti-American."

Stagger Lee here should be reported to the boys at Homeland security...apparently he is anti-American and a Osama Bin Laden supporter.

> You don't like it? I suggest that you use your OE news filters, or
> simply skip the thread. No one is forcing you to read it, and you sure

Oh, my! It does seem to affected your personality as well!

No doubt that "awful volleyball accident" left a permanent
swelling of the ego. Tsk, tsk.

Tell us about this "accident." Did that happen while on secret
air force duty in a commie squadron?

Did that happen while defending the free world with morse as
the only ham in all of Guinea-Bissau?

Were you injured by angry natives of Tanzania while unloading
a relief-supply truck carrying volleyball sets?

Please, tell all, your curriculum vitae on morsemanship is vital so
that doubting Diogeneses out here another light to guide them.
Tell all, beep those notes, strike that chord, be a lieder of men!

Roger laughs at a parent who lost his daughter. That goes way beyond
"words" and is deserving of legal action. It proves what a low life
Roger is:

In message <a4rsdh$4p6$5@dosa.alt.net>, KC8JBO attempted to justify
taunting a parent about his daughter's death by saying "Cruelty deserves
cruelty. An eye for an eye. I laugh at the pain I give them. It warms
my heart. Their pathetic insults don't hurt me at all. It's funny what I
do to make them dance. I OWN their sorry asses. And always will."

Turd Fredericks (as the name might hint) is a spankard. His hypocrisy
was proven long ago by John Kimball, after which Mr. Fredericks ran away
to hide. Your harrassment, defamation, and slander go entirely beyond
the limitations placed upon free speech. You are a disgrace, and in
fact YOU do damage to the concept of free speech.

Because you have almost no imagination, you post things like the
following (which can be found as message <3ab97a3a_4@corp.newsfeeds.com>
on Google):

==
"I'm sorry that you are a lonely, fat girl living in the mid west and
only have corn husks to play with, if you know what I mean. Try and pick
yourself up a life or some clue or something.

Understand what you speak of before you open your hotdog laden puss up
and start yapping. Really. You seemed like a nice little twat, at first,
but all this talk of libel makes you sound pretty damn obsessed. I guess
you were stalked or libeled or something earlier in life, and it sounds
like YOUR problem."
==

In summary, Wiseman: Bite me.

From: lenover21@aol.com (Len Over 21)

>Jim Haynie thought it reasonable that no ARRL Hq person should
>give opinions in here. Of course, that was in private mail that
>ensued after he popped in here shortly after his election.

Interesting. Jim knows that I hang out on rrap and he hasn't had a problem with that. He didn't have a problem when I didn't post here for 6 months, either.

>Should there be an official ARRL poll on that
>or are we to conclude that "his interest is zero" applies
>to everything concerning the ARRL's appearance to the
>outside world?

That would be a ridiculous conclusion. If that is the best you can do, you have lost this one.

>Many have "already bought it" long before I came into this chat
>room.

My goodness, you mean that all those people who are not ARRL members read rrap and think I am an ARRL apologist?

Another ridiculous conclusion. You lose.

>How many individuals or local clubs could afford the legal fees to
>contact the FCC in a formal way in the before-Internet days?

All it ever took was a letter. Another ridiculous conclusion. You lose.

>How
>many non-legal amateurs knew of the proper format of legal filing
>in order to gain recognition and consideration before the
>Commission?

ARRL put that information in its FCC Rule Book and would gladly tell someone how to file comments. You lose that point, too.

>The "last time we went through this" I said about the same as I had
>on previous times...that the ARRL is now LOSING some of the
>exclusivity in representation when the FCC has made it much
>easier for everyone to comment to them directly.

And a good thing that is. That is why ARRL asks hams to make their views known in FCC filings.

>Yup, it is another one of those "spin" answers.

Yeah, there is "spin" going on, Len, but it is all yours. You will say anything, no matter how distorted or ridiculous, to try to defame ARRL.

>I'm trying to get exact answers. I don't get those. What I get are
>standard boilerplate "the ARRL can do no wrong" misdirections
>into other areas.

ARRL can do wrong. And calling opinion different from yours "misdirection" is a pretty feeble debating tactic. You lose again.

>Whether it is called "mind control" or "brainwashing" or
>"psychological warfare," spin is still spin. It is common practice.

If you wish to believe that I am controlling your mind, that is your choice.

73,
Ed Hare, W1RFI

That much is certain. Chip away.

1037. Re: ARS Licensing in the USA Since WW2

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-11 02:16:03 UTC
From: n2ey@aol.com
Message-ID: <20020310211603.10589.00000117@mb-mb.aol.com>
Source record: 37030

A Brief History of Amateur Radio Licensing In The USA Since WW2 (1946-2002)

by N2EY - Part 3 of 4
The VHF/UHF Revolution (1970 - 1976)

Most of the VHF/UHF mobile services (police, fire, railroads, taxicabs, etc.) were using channelized FM equipment as early as the late 1940s. Amateurs continued to use AM well into the 1960s, and lacked any formal standardization of frequencies in the VHF-UHF bands. An informal "standard" existed based on frequencies that happened to be multiples of commonly available WW2 surplus crystals, but hams resisted true channelization.

In the '60s, however,some of the land mobile equipment from commercial services became obsolete for its original purpose and was offered to hams at low prices.

At first the idea of channelized FM operation did not get much of a response, but
by 1970 the idea was rapidly catching on all over the country. The deciding factor was the practicality of FM repeaters for extending the range of mobiles, portables and simple home stations.

In the AM days the range of VHF/UHF mobiles was unpredictable at best. Mobile to mobile contacts were particularly undependable. FM repeaters greatly increased the dependable range of most stations, because one only had to be able
to make solid radio contact with a repeater to enjoy the advantages of its location, high power, and gain antennas. Repeaters also changed the way hams operated on VHF, because no longer could one make long transmissions, or monopolize a frequency. Repeaters made channelized operation a necessity. Once the potential of the mode became apparent to most hams, FM quickly displaced AM as the VHF/UHF mode of choice.

Most early FM amateur stations, both repeater and individual, were a combination of homebrewing and conversion of surplus commercial equipment originally used by other services. New equipment meant for other services was usually too expensive, and ham gear capable of VHF/UHF FM did not appear for a few years. This went against the trend toward manufactured gear. Getting a repeater on the air was usually a group effort, and required many different skills and resources. Many clubs organized around repeaters.

The existing FCC rules did not make it easy for repeater operation. Logging was required of all stations. All transmissions through a repeater were considered third party traffic, which meant that all transmissions through the repeater had to be recorded. Repeaters had special "WR" callsigns, such as WR3ABZ, and a complex process more rigorous than used in other services was used to process repeater license applications. Autopatch and crosslinking were

prohibited, power and antenna restrictions were in effect, and a control operator had to be "on duty" at all times. Many changes in a repeater required a modified license. Even with these hurdles, however, repeater popularity grew rapidly.

From 1972 to 1977, these rules were eased considerably, after experience showed that hams could manage their own problems with the "new" mode. Crossbanding, linking, automatic operation, and autopatch became legal. Logging and application requirements were reduced to no more than any other type of station.

In 1974, logging requirements were eased. The only information still required was the calls of stations worked, the starting and ending dates, and any third-party traffic. Many hams still kept detailed logs, but it was no longer required by law. Requirements for portable and mobile operation were eased during this time period, as well. No longer would it be necessary to notify the FCC when operating portable or mobile for extended periods.

In this time period the license fees were increased to $9 for new and renewed licenses and exams, and $25 for vanity calls, then reduced to their former $4 and $20 levels.

For many years, hams had conducted "phone patches" - often for the families of military personnel. Strictly speaking, this was illegal, because the phone company prohibited the connection of non-phone-company equipment to their lines. (This was the era of "Ma Bell" having an almost complete monopoly). In 1970 the rules were changed to permit legal interconnection, if your equipment met the technical requirements.

Solid state equipment continued to displace tube gear, but there was still plenty of "hollow state" equipment being made. Japanese gear had a strong foothold in the amateur market. Many older American companies began to reduce their product lines or go out of the amateur radio business entirely.

In 1972, the FCC widened the HF phone bands. In effect, this reduced much of the impact of incentive licensing. The amateur allocations in 1972 looked like this: (Frequencies in MHz:)

1.8-2 CW/Phone (Subject to geographic and power limitations)
3.5-4 CW 3.775-4 Phone Novices 3.7-3.75 CW
7-7.3 CW 7.15-7.3 Phone Novices 7.1-7.15 CW
14-14350 CW 14.2-14.35 Phone
21-21.45 CW 21.25-21.45 Phone Novices 21.1-21.25 CW
28-29.7 CW 28.5-29.7 Phone Novices 28.1-28.2 CW
(Technicians had all privileges above 30 MHz except 144-145)
50-54 CW 50.1-54 CW/Phone
144-148 CW 144.1-148 Phone
220-225 CW/Phone
420-450 CW/Phone
1215-1300 CW/Phone
2300-2450 CW/Phone
3300-3500 CW/Phone

5650-5925 CW/Phone
10000-10500 CW/Phone
21000-22000 CW/Phone
All above 40000 CW/Phone

Extra Class Only:

3.5-3.525 CW 3.775-3.8 Phone 7-7.025 CW 14-14.025 CW 21-21.025 CW
21.25-21.27 Phone

Extra and Advanced Classes Only:

3.8-3.9 Phone 7.15-7.225 Phone 14.2-14.275 Phone 21.27-21.35 Phone

Also in 1972 the EIA (Electronic Industry Association, a manufacturer's group) petitioned the FCC to create a new "Class E" CB service by reallocating 224-225 MHz. The proposed new service would use channelized FM, and would not have many of the problems of 27 MHz CB. This proposal took several years to defeat, but was ultimately abandoned when 27 MHz CB was expanded to 40 channels.

In late 1974 the FCC proposed yet another license restructuring. This proposal was based on 35 rule-making petitions submitted to the FCC by various individuals
and small groups in the wake of the 1967-1969 "incentive licensing" changes. The
changes proposed would have resulted in a very complex US license and exam structure.

The proposal was for a "two ladder" license system, which would require 7 license classes. The "HF ladder", also called "Series A", would consist of the existing Novice/General/Advanced/Extra sequence, while the "VHF/UHF" ladder, ("Series B") would consist of a new sequence, Communicator/Technician/Experimenter/Extra. The dividing line between "HF" and "VHF/UHF" was set at 29 MHZ, however. Non-Extras would have to hold one license in each ladder/series if they wanted privileges both above and below 29 MHz. Many hams with existing licenses would find themselves holding two licenses if the proposed restructuring, because none of the license classes except Extra would convey privileges both above and below 29 MHz.

Tests would consist of the then-existing 3 code tests (5, 13 and 20 wpm) and a total of six new written tests, one for each of the non-Extra license classes.
Some of the testing would be taken over from the FCC by teams of two volunteer examiners.

The Communicator was to be a sort of "VHF Novice" with no code test and FM-voice-only privileges in the bands above 144 MHz. This was the first FCC proposal of
a no code test license for hams. The Experimenter would be the VHF/UHF equivalent of the Advanced, but would only require 5 wpm code.

New power levels were proposed: 2000 watts peak output for Extra, Advanced and Experimenter, 500 watts peak output for Technicians and Generals, and

250 watts input for Novices and Communicators. Generals and Technicians would lose mode privileges - they would only be allowed to use CW, AM, SSB or FM.

Advanceds would have gotten access to the Extra-only voice subbands of the time,
and Extras would get "for life" operator licenses.

The ARRL conducted a detail survey of all of its US members, and developed a counterproposal that was much simpler and consisted of a single "ladder", adding a "Basic" license that would be easier to get than the Novice. Neither proposal was very popular, and ultimately only minor changes were made to the license structure.

There were other rules changes that appeared minor at the time, but had long term consequences. Many of these changes, and others that would follow in the 1980s, had their roots in the 1974 restructuring proposal.

The waiting period for an Extra class license was reduced to
a year in 1973 and eliminated in 1976. Also in 1976, Technicians got Novice privileges, all hams were limited to 250 watts in the Novice subbands, and a Novice no longer had to wait a year to retake the test if he/she did not upgrade. The vanity call program was expanded, and the regulations on digital modes were eased. New types of amateur calls began to appear - calls beginning with N and A were added, as were "2X1" and "2X2" calls. The requirement to change callsigns when moving to a different district was removed in the early 1970s. No longer would it be possible to determine a US ham's location based solely on the callsign.

This period also saw the appearance of "Bash books". Although the written exams were secret, a fellow named Dick Bash published "study guides" containing the exact questions and answers on the tests. He gathered this information by paying people who had taken a written test to recall as much of it as possible. possible. He then collected all of the reported questions and answers and published them in book form.

The number of hams grew slowly until about 1975, then began to increase rapidly. By 1977 there were 327,000 US hams

Deregulation and WARC-79 (1977 - 1989)

In 1977 there were more changes to amateur radio regulations. Portable and mobile identification requirements were eliminated, "instant upgrades" became available, and license fees were abolished. The code sending test was waived and repeater rules were simplified even more. 1978 saw the Novice license term extended to 5 years and made renewable, the Conditional class license abolished (existing Conditionals became Generals), and secondary station licenses were abolished. ASCII and other standard data codes were authorized for amateur use. The first use of spread spectrum radio by amateurs was authorized in 1981 Technicians got all privileges above 50 MHz at this time.

Many of these changes were driven by the need for the FCC to reduce its workload. There were not only more hams, but many other new services were

appearing, and the FCC did not automatically get more funds to administrate the new services. In this time period it became common for the FCC to conduct testing sessions at hamfests and other gatherings. All that was needed was advance notice to the FCC and an estimate of the number of people to be tested, and the FCC would send an examiner if one was available. This reduced the number of offices and examination points needed.

In 1978 the FCC banned the manufacture and sale of amplifiers that could be used in the 24-35 MHz region. This ban was driven by the widespread use of amplifiers in the CB service, but the way the rules were written affected amateurs as well. Manufactured amplifiers could no longer cover 10 meters - but a licensed amateur could still homebrew an amplifier, or modify a manufactured one to cover 10 meters. Hams were limited to one amplifier per year, however. This action was significant because it was the first time ham gear had come under any kind of type acceptance rules.

In this period RFI became a major concern. Every day it seemed that new electronic gadgets were coming on the market - and intererence problems were no longer limited to TV and radio. The FCC eventually issued rules governing interference susceptibility - but the took the form of Part 15 warning labels, not technical requirements.

In late 1979 there was a World Administrative Radio Conference (WARC-79) to review international radio allocations. The result of this conference was three new amateur radio HF bands - 30, 17, and 12 meters. These were the first new ham bands in 32 years (15 meters was the result of the 1947 conference). It would take several years for hams to gain access to these bands, however.

By the early 1980s Japanese made amateur equipment became the most common, while most American manufacturers of ham radio gear had closed up or reduced their product lines to a few items. Also in this time period, personal computers began to appear in large numbers, and many of them were in ham shacks.

Two new digital data modes, AMTOR (error correcting RTTY) and packet, first appeared in the early '80s. Both became popular - AMTOR on HF and packet on VHF. AMTOR eventually gave way to PACTOR and other digital modes.

In 1983 the FCC announced a fundamental change to the licensing process. The FCC would no longer conduct examinations - instead, teams of volunteer examiners (VEs) would conduct all amateur radio exams. But this was a minor change compared to the fact that the test questions would no longer be secret - instead, the question pools would be maintained by volunteer examiner coordinators (VECs) overseen by the FCC. The "Bash books" of the '70s became official and legal. In addition, "instant upgrading" was authorized. Hams who upgraded would no longer have to wait for the actual license to arrive before using their new privileges.

Also in 1983, the FCC again proposed a codeless VHF/UHF amateur license. This was
opposed by a majority of hams, as it had been in the 1974 proposed restructuring.

1983 also saw a change in the power limit. The old "1000 watts input" rule was replaced by a new "1500 watt peak output" rule. This meant that hams could run more power in most modes, but a few modes, like AM, actually lost power.

The term of all classes of amateur license went from 5 to 10 years in 1984. The mandatory 30 day waiting period for retesting was eliminated in 1985.

1987 brought a restructuring called "Novice Enhancement" which gave Novices access to 10 meter phone and some limited VHF/UHF bands. Also in 1987, the Technician written test was made different than the General by splitting the General test into two parts.

The amateur allocations in 1987 looked like this: (Frequencies in MHz:)

1.8-2 CW/Phone (Subject to geographic and power limitations)
3.5-4 CW 3.775-4 Phone Novice/Techs 3.7-3.75 CW
7-7.3 CW 7.15-7.3 Phone Novice/Techs 7.1-7.15 CW
10.1-10.15 CW
14-14.35 CW 14.15-14.35 Phone
21-21.45 CW 21.2-21.45 Phone Novice/Techs 21.1-21.2 CW
24.890-24.990 CW 24.93-24.99 Phone
28-29.7 CW 28.3-29.7 Phone Novice/Techs 28.1-28.5 CW 28.3-28.5 Phone
(Technicians had all privileges above 30 mHz)
50-54 CW 50.1-54 CW/Phone
144-148 CW 144.1-148 Phone
220-225 CW/Phone Novices 222.1-223.91 CW/Phone
420-450 CW/Phone
902-928 CW/Phone
1240-1300 CW/Phone Novices 1270-1295 CW/Phone
2300-2310 CW/Phone
2390-2450 CW/Phone
3300-3500 CW/Phone
5650-5925 CW/Phone
10000-10500 CW/Phone
24000-24250 CW/Phone
47000-47200 CW/Phone
75500-81000 CW/Phone
119980-120020 CW/Phone
142000-149000 CW/Phone
241000-250000 CW/Phone
All above 300000 CW/Phone

Extra Class Only: (all frequencies in kHz):

3.5-3.525 CW 3.75-3.775 Phone 7-7.025 CW 14-14.025 CW 14.15-14.175 Phone
21-21.025 CW
21.2-21.225 Phone

Extra and Advanced Classes Only:

3.75-3.85 Phone 7.15-7.225 Phone 14.175-14.225 Phone 21.225-21.3 Phone

The rapid growth in the number of hams continued in this period. By 1989 there were over 500,000 US hams.

No-Code Licensing (1989 - 1997)

In 1989 the FCC once again raised the question of a nocode amateur license for VHF/UHF. This time the response of hams was divided about equally pro and con, and the ARRL, which had opposed all nocode licenses in the past, endorsed the idea of a "Communicator" type license. The FCC did not want another class of license, so in 1991 the Technician lost its code requirement. Since existing Techs had Novice HF privileges and "new" Techs would have only VHF/UHF, another license class, Technician Plus, was created. Existing Technicians, and those who passed the 5 wpm code test, became Technician Plus class.

In 1991 the FCC also created a program to accomodate those with disabilities that made it difficult or impossible for them to pass the 13 and 20 wpm code tests. The code waiver program, as it is called, requires a doctor's certification. Since 5 wpm code is a treaty requirement, no waiver for that speed could exist. This program came about at the request of the late King Hussein of Jordan, JY1, to the White House, not because of any request on the part of people with disabilites.

The number of hams continued to increase during this time. There were almost 680,000 hams by 1996 - but this total is inflated by the fact that the change to 10 year licenses meant that from 1989 to 1994 there were no license expirations at all.

Oh yes, Ed! I was having trouble keeping up with the new paradigm of "lifetime learning". So I found if I were to become a ham, I wouldn't have to learn anything, any more! Just kidding, but the post made me laugh. 8^)

>he took the tests? Were you dumber after you took your tests?

Cecil:

I, for one, was a heck of a lot "dumber" after passing all of my amateur
radio tests -- mainly because I was intelligent enough to realize that I
still had a lot more to learn, and had, in fact, only scratched the surface
of the total knowledge available to me. Over the years as a ham, I have
attempted to access some of that greater knowledge, and have enjoyed
learning about several operating modes, methods, and techniques that
are generally not tried by hams who do not advance beyond entry-level
testing requirements.

W1RFI wrote

>Ah, one of those "kids today" sort of things. If someone
>wants to do nothing, there are better ways than Amateur
>Radio to do it.

I didn't say they wanted to "do nothing!" Oh, yeah, they
want to DO something . . .

>The idea that someone wants to rote memorize 1000
>questions without understanding so they can do nothing
>is ridiculous on its face.

I guess I truly am talking to the wall here. If you don't get
what I'm talking about, well, wow . . .

>And if they do want to take the easy way out, it is easier
>to learn the underlying material than to do all that memorizing.

You are SO confused. Having the actual TEST QUESTIONS
in front of you, cold, changes the entire idea of "testing." It's
not about "memorization" per se, and never has been. If you
have the QUESTIONS and ANSWERS ahead of time, going
in, well, THAT in ITSELF is the problem, from my perspective.
It cuts the AMOUNT of WORK you have to do by at least one
order of magnitude, no matter HOW you do it.

Sheesh.

If it wasn't that way . . . why would the whole Bash system have
come into existence and, er, FORCED, to some degree, the
FCC to go to this pool system?

Riddle me THAT, eh?

Amateur Radio Newsline™ Report 1282 – March 8, 2002

Amateur Radio Newsline report number 1282 with a release date of
Friday, March 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The Dayton Hamvention announces the EMMY AND OSCARS of Amateur Radio. We have the winners on Amateur Radio Newsline report number 1282 coming your war right now.

(Billboard Cart Here)

**

HAMVENTION 2002: AWARD WINNERS NAMED

The Dayton Hamvention has named Radio Amateur Information Network founder Alanson “Hap” Holly, KC9RP, as its 2002 Radio Amateur of the Year. Holly received the news of his selection on Thursday evening February 28th in a phone call from Cathi Hoskins, N8ZCQ, who chairs the Hamvention Awards and Banquet Committee. KC9RP tells Amateur Radio Newsline that he was completely taken by surprise:

--
Holly KC9RP: “I was absolutely stunned! In fact, all I could say was me? I mean seriously, I was just absolutely floored.”
--

Holly, lives in Des Plaines Illinois has been licensed since 1965. He began his ham radio informational programming career in 1984 on a local Chicago Area repeater. This eventually lead him to become founder, moderator and guiding light of a weekly amateur radio audio feature magazine known as the RAIN Report.

--
Sample audio from Rain Report.
--

RAIN programming is distributed to hundreds of repeaters across the country via a telephone dial-up line, the rainreport.com website, by a subscription tape service and broadcast over W-A-Zero-R-C-R's weekly 160 meter informational net.

But that’s is only a small part of the Hap Holly story. Originally licensed in Escondido California at age 14, Holly who has been blind since age 7 served as a phone-patch station and net control for the famed WESTCARS traffic net until 1970. He then headed off to Principia College in Illinois and from 1970 to graduation in 1974, ran phone patches and kept radio schedules for many of

his fellow students.

Holly graduated Principia with a Bachelor of Arts degree in Sociology, and soon found himself in the Chicago area. There, he sought out world-class jazz accordionist Leon Sash, to pursue further training in music. As a professional keyboard player, Holly's diverse repertoire of American music of the past six decades has made him a popular choice in the Chicago area.

Hap met his wife-to-be while he was teaching a class in non-visual perception to high school students at a summer camp in Buena Vista, Colorado. The two were married in August of 1976. Stephanie, who is sighted, received her ham ticket and KA9WKD callsign in 1986.

Over the years, Hap Holly has written articles for the Spec-Com Journal, Radio Scan Magazine and occasionally reports for us here on the Amateur Radio Newsline. Holly is also a common sight at the Dayton Hamvention, taping forums which are then incorporated throughout the year into his RAIN Reports. And since 1975 KC9RP has been an honored member of the Des Plaines Lions Club. He has also been a member of the Des Plaines Toastmasters since 1976. He and Stephanie are also active with Des Plaines Illinois Emergency Medical Alert system.

Named as this years Hamvention Technical Excellence award winner is Alan Waller, K3TKJ, of Laurel, Delaware. Waller was chosen for his work that lead to the interfacing the Internet to Amateur Radio.

First licensed in 1961, Waller combined his decades-long love for Amateur Radio and a burgeoning interest in the then-new Internet to design and manage the www.qsl.net and www.qth.net web sites. That was back in 1993. Since that time, Alan Waller's web sites have come to serve the needs of tens of thousands of ham radio operators worldwide by providing a vast technical reference platform, an electronic mail service, web page hosting services, and links to thousands of other ham radio related sites. And in the true spirit of the Amateur Radio, Waller's initial work utilized leading edge experimentation to see what could be done with the technology then available. This has developed into a mature, reliable service to the world wide ham radio community.

Rounding out this seasons winners are a pair of pair of space exploring hams who have been named as co-recipients of the 2002 Hamvention Special Achievement Award. Former astronauts Owen Garriott, W5LFL, and Tony England, W0ORE, are being honored for paving the way for manned ham radio operations from the space shuttles that has made ham radio a permanent part of mans exploration of space.

Owen Gariott, W5LFL was first. On November 28, 1983, Garriott, was launched into space aboard the space ship Columbia for the STS-9 mission. It was the Spacelab 1 mission and Garriott brought along the first Amateur Radio station on a crew-tended space vehicle. It was a simple Motorola hand held transceiver connected to a special antenna designed to fit in the Space Shuttle's window.

Three days later, W5LFL came on the air and hams across the United States and around the world were witness to a historic radio transmission:

--
Owen Garriott W5LFL: “This is W5LFL in Columbia. W5LFL in Columbia orbiting the Earth at an altitude of 135 nautical miles passing over the U.S. West Coast and calling CQ.”
--

Among those who heard Owen Garriott's Amateur Radio transmissions from space was Lance Collister, WA1JXN of Frenchtown Montana. Collister, who is now W7GJ, is credited with being the first amateur to work an astronaut in orbit. Take a listen:

--
Lance Collister WA1JXN/W7GJ: “W5LFL on Columbia, WA1JXN, W-A-1-Japan - Xray-Norway, WA1JXN Frenchtown Montana standing by.”

Owen Garriott, W5LFL: “Hello W1JXN, WA1JXN, WA1-Juliet-Xray-November. This is W5LFL. You’re our first contact from orbit. WA1JXN, how do you read? Over?”
--

The success of Garriott’s mission lead to the development of SAREX -- The Shuttle Amateur Radio Experiment. And, over the years, SAREX permitted youngsters in classrooms around the world to speak directly with astronauts in space. But for this to happen, the technology of manned ham radio operations from space had to be enhanced. This aspect of the then new SAREX program fell to the next ham radio operator orbited: Tony England, W0ORE.

W0ORE flew into space on the shuttle Challenger in 1985. It was Mission 51F, Spscelab 2. In addition to the 2 meter FM voice gear, Tony England also had with him the first ever ham television station to go into space. Slow Scan yes, but capable of sending back high resolution images which hams on the ground equipped with SSTV gear could view live or record on a simple audio cassette for later viewing and historical archiving. From space, Tony England described the station he was using:

--
Tony England, W0ORE: “Essentially we’ve got a commercial TV camera that anyone could go out to their local radio store ant buy. We feed this into a scan converter built by a commercial outfit and modified by NASA Amateur Radio clubs and this takes a snapshot of the scene and digitizes it and put it in a memory.

Then its sent to a handie-talkie like this. From there we will send it over a wire up to the upper window upstairs and to this antenna when I get it up there in the window. Then it will be transmitted to the ground.

When we get going, we will be able to send color TV images of what we are doing on board as a series of snapshots updated every 10 or 20 seconds. Amateurs anywhere on the ground will be able to receive them, and ones with scan converters will see the pictures.”
--

That flight also marked another first. The first ever two way television -- ham radio television -- to and from space.

Tony England went on to flight prove both the improved FM voice and then new SSTV systems. The SSTV was so successful that NASA gave very serious consideration to a permanent installation on all shuttles for back up communications. More important, the early on-orbit operations by Own Garriott W5LFL and Tony England W0ORE made possible the thousands of educational contacts between children in school classrooms and the crews flying in space. First, on board the shuttles, and now as a permanent part of the International Space Station.

Hap Holly KC9RP, Alan Waller K3TKJ, Owen Garriott W5LFL and Tony England W0ORE will receive their honors at the Hamvention Awards Banquet slated for Saturday evening, May 18th at the Nutter Center in Dayton Ohio. Amateur Radio Newsline will be there to bring you this story and all the news about Hamvention 2002. (ARNewsline™ from Dayton Hamvention® news release. RADIO RULES: FCC RESUMES VANITY PROCESSING

Vanity license processing is getting back on tract. According to a Legaue bulletin the FCC now has all outstanding vanity applications filed last October in hand and is ready to resume routine vanity processing. Until recently a single missing vanity application had been holding up a backlog of more than 2000 vanity applications. The FCC credits the ARRL in part with helping to locate applicants and resolving the problem. (ARRL, FCC)

**

RESCUE RADIO: AMATEUR RADIO EMERGENCY COMMS SUMMIT

The first ever Amateur Radio Emergency Communications summit was held in Indianapolis last week. Amateur News Weekly’s Jack Parker, W8ISH, reports on the success of this first meeting.

--
They came from the Red Cross, Salvation Army, ARES, RACES and even CB-radio’s REACT team. Two dozen representatives of different Amateur Radio emergency communications groups met in a Federal Building training room to find ways of helping local and state emergency management organizations. The summit was organized by Marion County ARES director Mike Palmer, N9FEB. Palmer cited a need to develop better communications and cooperation between the different groups.

Many amateurs wear two or three different hats when it comes to providing public service. Palmer wants to identify those who are willing to help and to better utilize the voice and data communications available in the Marion County Amateur Radio Community. Many of the summit participants agreed this type of effort is long overdue.

Members of Army-Navy and Air Force Mars, as well as the Indiana Wing of the Civil Air Patrol offered their services during times of disaster. Everyone agreed this was a good start and look forward to future efforts to better train and organize Amateur Radio Emergency Communications in Marion County and Central Indiana.

Reporting from Indianapolis for Amateur News Weekly, this is Jack Parker W8ISH.

--

According to Jack, everyone came away from the meeting knowing that cooperation between groups is a key element in providing better service to the public. (ANW)

**

RADIO RULES: FCC ADOPTS AMBER EAS EVENT CODE FOR CHILD ABDUCTION CASES
The Federal Communications Commission has announced the adoption of a Report and Order amending the Emergency Alert System rules. Included are several new EAS event and location codes, which broadcast stations and cable systems may use to alert the public in the event of state and local emergencies. Of these, a new Child Abduction Emergency event code may be the most interesting to hams involved in Search and Rescue and who have E-A-S decoders installed in their repeaters.

The plan is described as a voluntary partnership between law enforcement agencies and the media that will be used to alert the public of serious child abduction cases where police believe that the child is in danger of bodily harm or death. Under the plan, radio and television stations will be permitted but not required to interrupt programming to disseminate information concerning serious child abductions when the new Child Abduction Emergency code is received. It could also be used by hams as an automated call to action to help find a missing child if used to activate an E-A-S equipped Amateur Service repeater.

Police departments say that every minute counts in dealing with an abducted child situation. In adding the Child Abduction Emergency code the FCC says that its responding to public concerns. (FCC)

**

ENFORCEMENT: FCC COMPLETES GEORGIA ARRL VEC EXAM SESSION AUDIT

The FCC has wrapped up an investigation into apparent irregularities at five ARRL VEC-sponsored Amateur Radio examination sessions in Georgia during 2000 and 2001. As a result of the probe, FCC Special Counsel Riley Hollingsworth says that several examinees will be called back for partial retesting:

--
Riley Hollingsworth: “We determined reviewing all of the information that was brought to our by the League that eight examinees will have to be retested on the code element. The ARRL has also relieved ten VE’s of their duties as volunteer examiners.”
--

According to the ARRL Letter, all V-E’s who might have been involved were suspended after the FCC investigation began last year. (FCC, RAIN)

**

ENFORCEMENT: A REPEATER OUTSIDE OF THE BAND

The FCC is also looking at the operation of repeater in the Metro New York City area. Again, the FCC’s Riley Hollingsworth:

--
Riley Hollingsworth: “We opened an inquiry into allegations that an uncoordinated repeater operated by Thomas Batista, KC2DDD, and Gerardo Arias, N2IFU, in Corona and Staten Island New York. Now that repeater is not only causing interference to a coordinted repeater, but the input is apparently on a frequency not even allocated to the Amateur band. So, needless to say we are real interested in reviewing that response when it comes in.
--

What Hollingsworth will be looking for is an answer to why the machine is using 143.020 MHz as an input frequency as well as why its on the air without coordination. 143.020 MHz is a full 800 Kilohertz below the bottom edge of the 2 meter Amateur band. (FCC, RAIN)

**

CONVENTIONS: SOUTH EAST VHF SOCIETY CONFERENCE

On a far lighter note, the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27th in Oak Ridge, Tennessee. And they too are putting out a call for papers. If you are interested in participating, please contact KG4QDZ by e-mail to kg4qdz@arrl.net. (VHF Reflector)

**

CONVENTIONS: CHARLESTON HAMFEST MARCH 16

And the 18th Annual Charleston Area Hamfest and Computer Show will be held Saturday, March 16, 2002 from 9 AM to 3 PM at the Coonskin Armory in Charleston, West Virginia. Talk-in is on the 145.35 MHz repeater. Admission is $5 and there will be free parking. More information is available by e-mail to n8tmw@arrl.net. (N8TMW)

**

**

HAM RADIO POLITICS: NCI LEADER CALLS FOR ELECTIONS

Bruce Perens, K6BP, the founder and an incumbent director of No Code International says that its time for new directions for the group and has called for elections. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--
According to Bruce Perins, K6BP, when he started NCI in 1997, he never dreamed that it's goals would be achieved so quickly. But says Perins; "we are most of the way there."

Perins notes that last year the International Amateur Radio Union voted to ask for the removal of the international treaty provision requiring Morse Code testing for Radio Amateurs. Now Perins observes that even ARRL has voted in favor of removing code requirements from the international Radio Regulations.

With what he terms as -- no remaining credible opposition to NCI's cause left on the international level -- Perins says that it is time to turn NCI's focus to domestic policy. He says that for NCI to take an appropriate role in the end-game of the no-code battle means cooperation with national societies like the American Radio Relay League. And to do this, Perrins believes may take some new people.

So Perins has asked that an election for new directors be held no later than April 30th of this year. He also says that any person who was an NCI member on December 31, 2001 can be a candidate for director, and is eligible to vote in the election.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

HAM RADIO IN SPACE: AO-40 GPS TEST RESULTS PUBLISHED

The February issue of GPS World included an article titled Formation Flying in Space. Authored in-part by AMSAT North America's Frank Bauer, KA3HDO, the essay shows G-P-S results from the receivers that NASA' Goddard Space Flight Center provided for flight on the AMSAT OSCAR 40 bird. According to Tom Clark, W3IWI, the data shown in the article was downloaded using AO-40's RUDAK system by WD0E and KB0G. (ANS)

WRTC-2002: ORGANIZING COMMITTEE ANNOUNCES THE COMPLETE LIST OF OFFICIAL ON-SITE REFEREES

The WRTC 2002 Organizing Committee has named a full list of on-site referees for the upcoming games. The committee says that it received more than 100 highly qualified applications and those chosen were from that group. A full list of referees and other information is available on the web at www.wrtc2002.org (WRTC2002)

DX

In D-X, word that Dave Cree, G3TBK, has returned to work in the Caribbean. Throughout March Dave will be active as J88DR from St. Vincent. For the first two weeks of April look for him J3 slash G3TBK from Grenada. Operations will be on all bands, but concentrating on the WARC bands, mostly on C-W, but with some SSB. QSL to Dave's home call either direct or via the RSGB bureau. (RSGB)

The New Zealand Amateur Transmitters Society is warning hams world wide of what they say is a pirate operation. According the NZART News, a maritime mobile station using the callsign ZL2TO and the name Tony has been heard recently operating on nets on 15 Meters. This station currently gives his location as the Cape Verde Islands. Only one problem. The ZL2TO call sign is allocated the Waitara Amateur Radio Club. (NZART)

And the South Africa Radio League news service says that anyone who has held a QSO's with 7Q8 slash ZS6GH or C9 slash ZS6GH should write them off . SARL says that these have been declared null and void because license or authorization to operate was issued by the telecommunications regulators in Malawi or Mozambique. (SARL)

THAT FINAL ITEM: NOMINATIONS SOUGHT FOR THE YOUNG HAM OF THE YEAR AWARD

And finally, we started this weeks newscast with a story about awards. Lets end it on a similar note as we here a Amateur Radio Newsline officially open the 2002 nominating season for our own Young Ham of the Year Award.

The Young Ham of the Year award was created in 1986 by amateur Radio Newsline producer Bill Pasternak, WA6ITF, to fill what he viewed as a void where younger members of ham radio society were often overlooked:

--
Bill Pasternak, WA6ITF: “When I was a young ham in the 50’s and 60’s the good deeds of young hams were often overlooked and ignored. When I grew up I was fortunate enough to be in a position to remedy this and thats how the Young Ham of the Year Award program came about. Thats how it came into being”
--

The award as originally envisioned as very low budget. One idea was for a certificate that would be mailed to a ham, age 18 or younger who had shown some exceptional ability or performed some heroic deed that set him or her apart from the crowd. When Bill mentioned the idea to Chip Margelli K7JA, of Vertex Standard back in the company’s days as Yaesu USA, the idea quickly expanded. Margelli offered company support on the spot:

--
Chip Margelli, K7JA: “When Bill Pasternak gave me a call and dsescribed the project to me in the tiniest bit of detail it was obvious that this was a no-brainer and something that we as a company at Yaesu wanted to encourage. So, I jumped at the opportunity to be a major contributor and it has been a great project ever since.”
--

The award now had substance, but it lacked a permanent home. One was found in 1993 when it was invited to the Huntsville Hamfest:

--
Bill Pasternak, WA6ITF: “The way we got to Huntsville? Simple. We advertised. We put a notice into the newscast that we were searching for a permanent home. The answer came in a note from Scotty Neustadter, now W4WW, who is the Huntsville Hamfest Chairman. Scotty basically said bring it to Huntsville. And we did.”
--

While the presentation ceremony did go to Seaside Oregon in 1994, it returned to Huntsville in 1995 where it has been ever since. And in 1996 a second major corporate underwriter came on board. C-Q Magazine. Rich Moseson W2VU, is editor:

--
Rich Moseson, W2VU: “We at CQ have always thought that it is very important to promote Amateur Radio to young people and we saw that co-sponsorship of the award was the way to help do that.
--

What CQ did was to add to the Young Ham of the Year awards chest something very special. A week of fun and excitement at Spacecamp. Today, with corporate sponsorship from Vertex-Standard USA and CQ Magazine, and support from countless others including the ARRL, Dave Bell Associates and Rosewood Communications the Young Ham of the Year Award continues to honor the Amateur Radio related achievements of those hams age 18 or younger. And now its time to find a fitting recipient for 2002.

Full details, rules and a nominating form are available right now on our website at www.arnewsline.org. Just scroll down to the Young Ham of the Year Award area and click to download. Or you can send a self addressed stamped envelope to the 2002 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350 and we will mail back the materials.

The Amateur Radio Newsline Young Ham of the Year Award is a one of a kind. It honors the youth of ham radio and in doing so, we hope it helps to insure a bright future for the hobby and the radio service that all of us love. (ARNewsline™)

Actually, the knowledge that you had a lot to learn smartened you up,
not dumbed you down. I just do not see how taking and passing a ham
radio exam can dumb a person down.

If that is true, it's the way the FCC wants it to be. I had
open book exams in college. They were sometimes more difficult
than the closed book exams. Have you memorized those 1000
Russian words and definitions yet?

You might ask W5TIT what she thinks, or better yet, reread what she has
already said
about ham radio testing.

Oh, so you don't believe it would be important that a ham might be able to minimally use Morse code, he isn't allowed to use it to bail himself or a group out unless he can handle a formal traffic net. We see. So much for saving the day, right?

Well you seem to think its just fine for him to be able to not use CW at all. So why the fuss because I think it might be better to be able to use it even crudely than not at all?

> It is my belief that he would simply be in the way in a CW emergency
> net.
>

Only if he needed to pass important traffic and was unable to do so. Why should it matter if he is not highly skilled when he was the only means of getting the traffic handled?

You can't understand the difference beteen a dumbed down test, and what results, and the act of making someone dumber. And still you claim to be a genius.

Ah, gee Bill. The light is going on. So no one is supposed to learn
anything meaningful without it resulting in a degree.

So, are you having memory problems also? If you'll bother to look back
into the archives you'll see where I said -several times- that no one
expects or ever did expect the entry class licensees to know very much.
But the Extra class was intended to be different. Now it no longer is,
evidenced by your following paragraph......

>
> What hams have done in the past and still do now is to
> follow one or more paths after becoming a ham which
> focuses their "advancement, knowledge, skills" into
> specific areas.

Why have more than a single license if no one needs to do anything but
get a 'gateway to get on the air'? What's the point?

>
>
> I passed the Extra over two years ago...and have promptly
